## NEWS

■ Microsoft fires back in the spreadsheet wars with Version 5.0 of Excel, which features task automation and better 3-D analysis. *Page 4*

■ X/Open is expected to announce this week that it will certify an industry-standard "Unix" brand name, bringing more unity to the Unix world. *Page 4*

■ Wal-Mart promoted its CIO to a new position: president of the \$5 billion company's international division. *Page 6*

■ Preport-McMullan and ISSC are replacing their mainframe-intensive outsourcing deal with a contract emphasizing labor costs, as Preport moves to Unix. *Page 6*

■ Digital will bid for the low-end groupware market this week with a shrink-wrapped version of its LinkWorks product. *Page 6*

■ Microsoft is moving to ease support and installation of Microsoft Office. *Page 10*

■ Extending LANs to remote users and getting control of resulting increases in bandwidth use is a major theme at Networkworld '93. *Page 12*

■ Developers are raving about the NETWORLD features promised by Novell in its AppWare development environment, which debuted last week. *Page 14*

■ Microsoft clarifies delivery date, positioning of its Windows NT management platform. *Page 15*

## DESKTOP COMPUTING

■ It may be true that IBM delivered a "better DOS than DOS," but the company faces an uphill fight among users from MS-DOS to its own PC-DOS. *Page 35*

## WORKGROUP COMPUTING

■ A bandwidth barrier may be falling by the wayside with the announcement of 20M bit/sec. wireless LAN technology. *Page 41*

## Executive Briefing

Microsoft may not be loved, but it continues to be the 500-pound gorilla of the desktop. Apple is reportedly prepared to start selling Windows software, reasoning that the market is too big to pass up. *Page 7* IBM is running into problems selling PC-DOS 4.0 on the MS-DOS-dominated desktop. *Page 35* And Microsoft itself is turning up the heat in sales by providing more flexible installation options and custom support. *Page 70*.

The Novell/Microsoft battle continues to vex users, however. Microsoft dodged questions last week on its plans to support NetWare from its Netware system management platform. *Page 15* And the refusal of the two vendors to cooperate on NT-

Management: Union Carbide's Tel Smith puts computers to work as trainers. *Page 81*

## IN DEPTH

■ In the world of wireless networking, nothing can scuttle mission-critical production work faster than inadequate radio frequency coverage and poor bridges between wired and wireless machines. *Page 89*

## CAREERS

■ Treat relational databases as a bunch of files to ease the transition from a flat-file mindset, experts say. *Page 92*

## MARKETPLACE

■ Visual development tools are all the rage but have their limitations. *Page 101*

## COMMENTARY

■ As businesses collect more and more data on their customers, the demand for something to process all that information should drive the market for commercial parallel processors, Charles Babcock says. *Page 6*

■ The software industry has a responsibility to ensure that its products are reliable, Steve Epstein argues. *Page 33*

■ Esther Dyson says Talligent gives users the gift of choice by separating features such as networking and applications from the operating system. *Page 33*

■ The bickering between Microsoft and Novell over NetWare support in Windows NT is a lose-lose proposition for customers, Elizabeth Horwitt argues. *Page 41*

■ IBM is passing up a big opportunity by ignoring its small to medium-size mainframe customers, Johanna Ambrosio says. *Page 63*

Company Index ..... *Page 107*  
Editorial/Letters to the editor ..... *Page 32*  
Friday Stock Ticker ..... *Page 108*

Time to stuff more functionality into their houses. NetworkWise will offer a built-in PC and 10Mbps wireless Ethernet support in its Series 8000. *Page 17* And electronics-mail vendors are breaking their products into client and server pieces, offering users more choices. *Page 25* Wireless networking pioneers are discovering problems with interference (*Page 89*) and just keeping up with the terminology. *Page 57*

The software licensing field is wrestling with plummeting residuals and license instability. The pending resignation of IBM's president will only further confuse things. *Page 7* And why isn't IBM paying more attention to low-end and midrange main-

frame customers who need a place to go. *Page 63*

Major groupware vendors are planning to add document management features to their products, but they don't agree on how to do it. *Page 17* It took a while, but IBM finally details plans for a client/server ImagePlus. Most of the pieces should be delivered next year. *Page 63*

Computer-based training is drawing more attention as businesses change roles retaughting processes. But a lot of IT departments don't work well enough with the human resources organizations that coordinate skills development. *Page 87*

# No Fences. No Boundaries. No Limits. That's The Freedom Of CA90s.

The freedom to choose the best applications without worrying about hardware constraints.

The freedom to right-size your entire computing environment with the best mix of hardware platforms.

And the freedom to integrate and automate all your applications across the many proprietary, closed environments you face today. It's all there inside the most comprehensive architecture ever developed: CA90s.

The only architecture that supports every major hardware platform including IBM, Digital, Hewlett-Packard,

Apple, Fujitsu, Bull, Data General, Tandem and Hitachi. All the major operating systems: MVS, VSE, VM, VMS, UNIX, APPLE, WINDOWS, DOS and OS/2.

And the world's broadest range of integrated software solutions, covering systems management, information management and business applications.

If you're tired of being fenced in, call 1-800 CALL CAI for complete information on CA90s.

The architecture that can set you free.

# Excel upgrade adds agents

By Michael Vizard  
REDMOND, WASH.

Microsoft Corp. plans to deliver in December an upgrade of its Excel spreadsheet that will include agents that automate tasks and significantly improve support for three-dimensional analysis.

But whether Excel 5.0 will be able to thwart Lotus Development Corp.'s attempt to challenge Microsoft's dominance in the Windows spreadsheet arena with 1-2-3 Version 4.01 for Windows remains to be seen. Excel will also attempt to defeat Borland International, Inc.'s bid to gain market share with a \$50 offer for Quattro Pro 5.0.

The offerings from the three companies appear to have strengths in different areas, so the determining factor may come down to a combination of installed base pull and ease of use.

In fact, industry analysts suggested that individual features are no longer as important as technology additions designed to simplify the use of a given spreadsheet. They also predicted that vendors will be more likely to focus on bundling ready-made application templates into their spreadsheets to enhance user productivity.

For example, Microsoft is expected to use the version of Visual Basic currently deployed in Excel to create application templates for vertical markets.

Vendors "have to provide capabilities beyond just macros. They won't do it immediately but it is the next logical step," said Kryzyna Paliworski, an industry analyst at Datapoint, Inc. in San Jose, Calif.

That is because the features war is winding down, said Daniel Gasteiger, editor of the "Spreadsheet Consultant" newsletter in Cambridge, Mass. "The battle will now be fought along the lines of instant productivity."

Short term, however, spreadsheet vendors are focused on agents that automate previously complicated tasks.

In Excel 5.0 these agents take the form of tools such as "Tip Wizards," which advise users on how to better perform a repetitive task; an AutoFilter capability that provides a one-step method for browsing through a list of worksheet data; and automatic subtotals for performing calculations. Also included is the ability to more easily update a chart.

## How spreadsheets stack up

	Microsoft	Lotus	Borland
Version	5.0	4.01	5.0
Platform	Windows and Mac	Windows	Windows
Features	Tip Wizards, AutoFilter, AutoFormat, AutoCalculate, PivotTables, PivotCharts, Visual Basic, and a host of support tools	AutoFilter, AutoFormat, AutoCalculate, PivotTables, PivotCharts, and a host of support tools	AutoFormat, AutoCalculate, PivotTables, PivotCharts, and a host of support tools
Support	Microsoft Support, Microsoft Knowledge Base, Microsoft Web site, Microsoft e-mail, Microsoft newsgroups	Lotus Support, Lotus Knowledge Base, Lotus e-mail, Lotus newsgroups	Lotus Support, Lotus Knowledge Base, Lotus e-mail, Lotus newsgroups
Cost	MSRP \$199	MSRP \$199	MSRP \$199

In contrast, Borland has already deployed agents, called "experts," to automate tasks in Quattro Pro, and Lotus is evaluating the agent technology strategy.

While making spreadsheets easier to use as part of a long-term effort to bundle in ready-made applications is a major focus of the Big 3 spreadsheet providers, the features war is not entirely over.

For example, in Excel 5.0, Microsoft has moved to im-

prove Excel's 3-D analysis capability, an area in which Lotus and Borland have reportedly excelled.

"Microsoft is becoming a lot more competitive in the 3-D arena. Historically, they've been a big loser here because they had a horrible 3-D implementation," Gasteiger said.

To address this issue, Microsoft has added PivotTables, which allow users to analyze data across multiple worksheets simply by dragging and dropping on any range of data. That feature has been well-received by Excel beta users (CW, Oct. 4).

## Users loyal to Lotus

But 1-2-3 users maintain that Lotus still has a better 3-D implementation.

"We think that 1-2-3 is a true 3-D spreadsheet, while the workbooks in Excel are what I call a pseudo 3-D implementation based on linking workbooks," said Stacy Kenworthy, technical director at the executive planning services division of Alexander & Alexander, Inc., a consulting firm in Atlanta.

However, while Microsoft has an advantage with Visual Basic, Application Edition, Lotus still has a compelling suite strategy (CW, Oct. 4).

"Lotus' products look like they were designed together, whereas Office looks like applications that were designed together," Gasteiger said.

Meanwhile, the company most likely to be hurt by Microsoft's assault in the spreadsheet arena is Borland. "If anybody is in a bad spot, it's Borland. They're a scrappy company that does great stuff, but I haven't heard of people moving to Quattro Pro en masse," Gasteiger said.

"And I don't believe that an alliance with WordPerfect is going to prove to be a compelling suite strategy," he added.

Nevertheless, Borland's spreadsheet technology continues to be well-received by its installed base, and the company has made significant strides in terms of sharing data across applications using its Object Exchange facility.

# Unix brand deal approved

By Jean S. Bozman

After weeks of negotiation with Common Open Software Environment (COSE) members and others, Novell, Inc. and X/Open Co. are expected to announce an agreement today that will confer Novell's "Unix" trademark on X/Open. The agreement will allow X/Open to certify industry-standard Unix operating systems based on a common set of X/Open application programming interfaces (API).

Both parties confirmed last week that they will schedule an international videoconference to announce that a unified Unix will be built on X/Open's Spec 1170, a common set of 1,170 APIs unveiled last month (CW, Sept. 6).

The Spec 1170 standard will become the single specification that vendors can enhance in their own Unix implementations, Novell said.

"The reality is that we are passing over to X/Open the trademark, and that trademark is going to become the name for compliance with Spec 1170," explained Larry

Lytle, a spokesman for Novell's Unix Systems Group. As the APIs change over time, the process will be managed and administered by X/Open. Vendors will still be required to prove their compliance with test suites. "We [at Novell] will roll out technology to keep on track with that, as will other vendors," he added.

The delay in X/Open's announcement that it will "brand" Unix — expected at September's Unix Expo in New York — allowed Novell time to negotiate with Unix rivals Sun Microsystems, Inc. and The Santa Cruz Operation.

The transfer of the Unix trademark from Novell to X/Open will take place immediately, said Don McGovern, vice president of strategic relations and business development at Novell, who worked on the X/Open agreement. "X/Open will own it," he said. "They will be the only entity in the world that can sublicense the Unix trademark."

Vendors will have the option of calling their operating system "Unix" instead of a vendor-specific

name — such as IBM's AIX or Hewlett-Packard Co.'s HP-UX — if they license the X/Open Unix trademark, Lytle said. Novell will continue to sell its Unix System Group's System V operating system source code likely under the name of UnixWare, which is a Novell-specific implementation of the Spec 1170 APIs, Lytle said.

## X/Open's significance

Some analysts said X/Open's Spec 1170 APIs are far more significant than any branding of Novell's Unix trademark could be.

"If the API stuff holds together, that's the most important piece, along with IBM, HP and Sun agreeing to go along with it. The rubber meets the road when these guys ship an operating system that really observes all these APIs," said Neal Hill, a Unix analyst at Forrester Research, Inc. in Cambridge, Mass.

Large user sites may find that X/Open's branding will help with volume purchases, said Jerry L. Johnson, standards analyst at the state of Texas' Department of Information Resources in Austin. Listing X/Open's Spec 1170 as a requirement on bids for the state's 250 agencies will help to ensure compatibility, Johnson said.

# Retraction

On July 25, *Computerworld* published an In Depth article titled "Beyond design support." Written by the staff at Codd and Data, Inc., the article proposed 12 rules by which users could evaluate analytical processing tools. Included in the article was a chart furnished by the Codd group at *Computerworld's* request, listing the products of five vendors and their degree of compliance with Codd's 12 rules.

At the time the article was prepared, the *Computerworld* staff did not know that it was part of a white paper paid for by Arbor Software, Inc. Arbor's product, Ebasebus, scored a perfect 12 out of 12 in compliance with Codd's rules in our chart. By contrast, no other vendor scored better than half that.

*Computerworld* has a long-standing policy not to use data culled from research unattributed by a single vendor and should not have published the chart.

In addition, the Codd group assured *Computerworld* that the information on the other vendors was obtained directly from company spokespersons. After Arbor Software objected to the data published on its product and insisted that it had never been contacted by the Codd group, *Computerworld* asked the Codd group about this discrepancy. After several weeks of trying unsuccessfully to determine with whom the Codd group had spoken, we have no reason to believe that Arbor was contacted.

We therefore assume the information supplied to us about Arbor and possibly about the other vendors listed in the chart may be flawed and should be disregarded, as should the entire chart.

— Bill Lederis, editor in chief

## Parallel processing seeks business role

**P**arallel processing has had little impact on corporate information systems, but even so, there are good reasons for IS executives to keep an eye on developments in the field.

Technology advances keep hinting at the prospect that one day parallel processing will emerge as a replacement for the mainframe. A cheap form of concentrated power. This won't happen tomorrow. Parallel processors are expensive, and when business tasks are only somewhat able to take advantage of them, the expense of a processor tends to paralyze the chief financial officer, and old-fashioned sequential processing will fill the bill.

Nevertheless, there is a distinct possibility that the nature of the business challenge is changing and taking on a greater degree of parallelization.

As John Mucci, vice president of business supercomputing at Thinking Machines, notes, businesses with millions of customers are storing data on those customers faster than they can figure out what to do with it. The introduction of point-of-sale computers in department stores, automobile showrooms and clothing stores is supplying a wealth of information about buying patterns. If the businesses can find a way to analyze it.

Because pattern analysis involves common sets of data, frequently in multiple databases, it leads itself to a lengthy parallel processing inquiry that would take days or weeks to run, even on an IBM mainframe.

Epsilon Data Management in Burlington, Mass., a subsidiary of American Express, has addressed this task. Epsilon has written pattern-seeking software that can import data from standard mainframe databases and process it in a parallel system.

One firm that acknowledges using Epsilon services is Lotus. I am not privy to how Lotus makes use of pattern-seeking, but it seems to me that a company with millions of 3-23 spreadsheet customers would want to know which ones were buying Notes or CC-Mail and what buying patterns the purchasers of the broadcast part of the product line have in common.

In January 1986, Epsilon purchased a 64-processor Thinking Machines CM-5 and used it to develop a system to work with American Express' IBM mainframes in its Phoenix data center.

Gartner Group researchers and authorities in the supercomputing field have followed this deployment and concluded that American Express wasted the capability to conduct ad hoc queries against its huge databases to see what customer information lay hidden in them.

Although the exact nature of these queries isn't known, the researchers believe American Express wanted to run what-if simulations against customer data to try to predict trends.

In a more immediate sense, if I wanted to comb its data to see if it could identify the 2% of customers most likely to drop their American Express credit cards within a few months, by identifying this group, it could sort out those I wanted to keep and launch special appeals their way in a direct attempt to retain them.

Once the value of such parallel processing applications is revealed, many business users are likely to think of ways they can mine and use the information in their own databases, creating a greater need for parallel processing power.

Parallel processors are also likely to decrease in price as they take advantage of the many mass-produced parts now on the market. A Thinking Machines CM-5 already uses three SPARC logic chips, IBM 3.5-in. disk drives and standard 486- and 1034-bit RAMs.

So at some point in the foreseeable future, parallel processing is likely to appear on the list of resources IS must manage and use.

Searching for patterns in large volumes of customer data is a prime use for parallel processing.

Charles Babcock

## Outsourcing gains energy

Freeport, ISSC resize pact as host dependency declines

By Mark Halper

NEW ORLEANS

In a drastic switch of price mechanisms from one based on CPU cycles to one that measures labor, Integrated Systems Solutions Corp. (ISSC) and its client Freeport-McMoRan, Inc. last week restructured their outsourcing contract to help Freeport migrate to a Hewlett-Packard Co. Unix platform.

Starting in January, ISSC and Freeport will replace a 10-year hybrid mainframe/client deal, valued at an estimated \$100 million, with a full client/server contract over five years. The revised contract will represent "substantial cost reductions" over the current mainframe arrangement of 16 headquarters, said Mike Arnold, chief information officer at the New Orleans mining and processing firm.

An ISSC spokesman characterized the new deal as "in-bore-oriented" and said the two parties lowered its value through changes in terms as well as duration. Neither Arnold nor the spokesman would state the new price.

The new contract will invoke charges based on ISSC labor fees for operating Freeport's incoming HP 9000 Model 890 as well as an Digital Equipment Corp. VAX 4300 that Freeport has been running on its own. In addition, Freeport will pay ISSC labor for PC and LAN support—which ISSC may subcontract to Freeport's current LAN support provider, Computerland Corp. — and database administration and network management.

In shifting to a labor formula, Freeport and ISSC are providing a solution to an outsourcing

puzzle: How do outsourcing accustomed to charging for processing units work out equitable pricing schemes in a client/server world where their efforts are less processing-intensive and more service-oriented? (CW, Aug. 23)?

Arnold noted that because "there was no model out there," devising a new pricing scheme was difficult. "We spent some time with ISSC management assessing alternative ways we could structure this agreement that would meet variables if we grow or shrink, and also give an element of predictability in them," Arnold recalled.

Although ISSC has worked out a new price formula at Freeport, there is no guarantee that it has developed a stencil for other client/server deals.

"We're not prepared at this time to make any official comments on our pricing strategy," the spokesman said.

Compared with the relatively "straightforward" process of measuring gains in house performance, quantifying distributed computing is a "bigger target because you have to look for hidden costs of support," noted Len Bergstrom, president of Real Decisions Corp., a Darien, Conn., consulting company.

According to Arnold, Freeport negotiated a fee for "transition services," in which the company pays ISSC for mainframe operations it continues to provide until Freeport completes its move to client/server computing in July 1994.

Freeport accelerated its client/server plans last January after it gave up control of its mainframe-dependent fertilizer subsidiary, Agrico Chemical Co., to a joint venture with International Minerals Corp. in Chicago.

## Wal-Mart CIO to head new international unit

By Thomas Hoffman

ENTONVILLE, ARK.

Bobby L. Martin, whose nine-year reign as executive vice president and chief information officer at Wal-Mart Stores, Inc. was highlighted by his chief orchestration of technology deployment, was rewarded with a recent promotion to president and chief executive officer of Wal-Mart International, a newly formed division.

Martin will charter the \$55 billion retailer's expansion overseas, including ventures into Puerto Rico and Mexico. Martin was succeeded by Randall Mott, who has assumed the mantle of vice president and CEO, up from his former position of vice president of systems development.

Under Martin, the retailer was among the first to adopt Unix across its enterprise, implement massively parallel databases and use sat-

ellite communications to link each store to headquarters.

Martin's promotion outside of the glass house is not rare among CIOs, though notable exceptions include Arthur F. Ryan, president and chief operating officer of The Chase Manhattan Bank NA, and Eugene B. Shantz, president of Bankers Trust Co., said Joseph Ziskin, senior manager of the center for information technology and strategy at Ernst & Young in Boston.

"You don't see too many CIOs moving in that direction, but a lot of it has to do with the company's view of technology and what has been accomplished there," Ziskin said.

Ziskin praised Wal-Mart for its visionary approach and for the business acumen of its information systems staff, whom he said he regards as retailers first and technologists second.

Martin, who came to Wal-Mart in 1982 after a stint at Dillard's Department Stores, Inc. in Little Rock, Ark., said Wal-Mart International will focus first on expansion opportunities in Mexico.

Babcock is Computerworld's technical editor. His MCI Mail address is 575-ET37.

## News Shorts

**House to examine competitiveness**

The House Subcommittee on Economic and Commercial Law has scheduled a public hearing Wednesday looking into competitive practices in the computer industry (CW, Oct. 4). While the purpose of the hearing is to discuss a broad range of market segments, the subcommittee will pay particular note to the operating systems market. The subcommittee is doing some "field research to see if it should do some further meddling" involving the competition among various operating system vendors, a source familiar with the proceedings said. Representing Microsoft Corp. will be William Neukom, vice president of law and corporate affairs. Ray Noorda, Novell, Inc.'s chairman, was scheduled to appear, but a company spokeswoman said he would not. Appearing at the hearing will be executives from Dell Computer Corp. and Cyrix, Inc.

**Dell recalls subnotebooks**

Dell suffered another setback in the notebook market, when late last week it recalled 17,000 of its 3200Li and 3250Li subnotebooks to replace a capacitor that could crack, causing an overheating problem. Dell said three systems had been returned because of the overheating problem. The company was unable to replicate the problem in its labs, but decided to recall the models anyway. Dell said it expected the recall to cost between \$1.5 million and \$2 million. Customers can call (800) 647-4171 to arrange for repairs.

**Ami Pro price breaks from Lotus**

Looking to bolster its share in the word processing market, Lotus Development Corp. is allowing sites to upgrade 25% of their installed base — up to 50 users — to Ami Pro 3.01 at no charge through the end of this month. Lotus has also launched a Smart Buy bundle, which includes Ami Pro, Insoft, Inc.'s Quicken 3.0 for Windows and a coupon for a free copy of ChipSoft, Inc.'s Turbo Tax, priced at \$495. A competitive upgrade version of this deal is priced at \$159.

**Thrifty-ness pays off for ISSC**

Los Angeles-based retail drug store chain Thrifty Corp. has signed a deal to outsource its information systems to IBM's Integrated Systems Solutions Corp. (ISSC). The 10-year, \$190 million agreement calls for ISSC to migrate Thrifty from an aging IBM 3600 Model 5000 to multiple AS/400 boxes. ISSC said the "vast majority" of Thrifty IS personnel will join ISSC.

**NMS gets remote diagnostics**

Novell last week announced NetWare Management System (NMS) Version 2.0, which supports Remote Monitoring-compatible LAN diagnostics on distributed NetWare Loadable Modules. A LANalyzer Agent sits on NetWare 3.x and 4.x servers, collects statistics and can then report them to a central NMS Windows console. LANalyzer Agent is priced at \$1,495 for a single-interface version and is available now. NMS 2.0 is priced at \$2,495 and is available now.

**SHORT TAKES** The SQL Access Group, which sets standards for necessary data in relational databases, elected a new chairman, Jon Denrich, a technical director at Information Builders, Inc., and a new Digital Equipment Corp. engineer, Jeff Bellowski, as head of SQL Access. ... The networking community got a major boost toward worldwide intern-LAN connectivity last week when long-distance carrier WiFiTel extended its Frame-relay service to Europe — to London and Frankfurt and eventually to Tokyo.

More news shorts, page 16

**Digital to launch groupware effort**

By Craig Stedman

MATTHEW, MASS.

Digital Equipment Corp. this week will introduce a shrink-wrapped groupware package positioned as underlying software for building applications that will incorporate email, work-flow, document management and other functions.

The object-oriented LinkWorks package will be the core piece of the wide-ranging solution aimed at shaping up Digital's image as an open systems vendor.

LinkWorks, developed for Digital by an Austrian firm, has been sold since early 1992 by Digital's European services organization under the name Objectworks. One of six "software frameworks" that Digital is now emphasizing, LinkWorks is being marketed as a tool for integrating various applications across workgroups in an attempt to differentiate it from Lotus Development Corp.'s Notes.

Anna Palermo, an analyst at International Data Corp. in Framingham, Mass., agreed that LinkWorks and Notes "solve different types of problems." She added, however, that the two will probably compete for some purchases.

LinkWorks received good marks

from Palermo and others, but some said an initial lack of shrink-wrapped support for non-Digital servers beyond Intel Corp.-based systems running The Santa Cruz Operation, Inc.'s SCO Unix could hurt sales in multivendor environments.

LinkWorks can be bought for

Shrinking the walls	
Availability in December: Digital's LinkWorks (beta) of \$595 will support its networking platform.	
CROSSOVER	
• Windows 3.1	• Macintosh System 7.0
• Multi-tasking LAN controllers	• OS/2 Presentation Manager (planned)
SERVICES	
• Right-AS/400 running UNIX, OS/2/	• IBM/Windows

• VME running OpenVMS (planned)	

use with IBM's and Hewlett-Packard Co.'s Unix systems, but only by contracting with the Digital Consulting unit to implement the software, Digital said. Packaged sup-

port is not available.

Wes Melting, an analyst at the Gartner Group, Inc. in Stamford, Conn., said that approach "is just absolutely contrary to the whole notion of open systems."

Bank of Montreal is implementing LinkWorks in its corporate banking department through a contract it signed with Digital and has had good results in reducing the time it takes to prepare credit applications, said Michael Frow, vice president of credit at the bank's U.S. operations in Chicago.

Frow noted, however, that multivendor support is "very necessary" for a product like LinkWorks. "You don't have time to go and reinvent all of your systems, especially when you've built things up on a departmental basis," he said.

Dilip Phadke, LinkWorks group marketing manager, said the LinkWorks group is trying to get service contracts priced so that users "don't pay a penny because they're running it on IP," but that is still being negotiated with Digital Consulting.

Shrink-wrapped versions for IBM and HP may be added, "depending on how many we sell," Phadke said.

**ICC woes**

CONTINUED FROM PAGE 1

new Research in Phoenix. "But they have been able to mask a great deal of the losses because they have been able to write a lot of new business to compensate."

ICC is not engaged in anything illegal, he added: "It's just that they and everyone else take advantage of an idiotic accounting system."

Rules from national accounting bodies stipulate when a company can put a financial transaction toward the bottom line vs. when it must write it off, but these rules are not always clear-cut. This can even happen when, as in ICC's case, a parent company is involved through which some of these transactions flow.

Not everyone believes ICC is headed for a fall. Robert Stader, an analyst at Metac Group Inc. in Westport, Conn., said, "I don't think that they are going to be any ugly surprises at ICC. These guys have been very conservative about what gets on their books."

Plus, he pointed out, ICC's financial track record has been very strong with returns on investment in the 20% range vs. returns half that for most other lessors.

But there are other problems.

Unlike most lessors, ICC handles mostly IBM gear, and this limits the unit's ability to grow its business. An ICC spokesman said more than 90% of its portfolio is IBM gear.

On Jan. 1, Kavetas will be succeeded by ICC Vice President James J. Forsee. He, like Kavetas, could not be reached for comment.

Also, some clients said they perceive ICC as much less flexible and accommodating than competitors.

"Even HICC is cheaper going in, it's less expensive in the long run to go with someone else," said John DoeGreat, data center manager at Pier 1 Imports in Fort Worth, Texas. If DoeGreat wants to change terms in the middle of the lease, for example, "the others will work with me and IBM won't."

As a result, he has more than 20 contracts with El Camino Resources Ltd., a leasing concern in Northridge, Calif., and only two with ICC.

The ICC spokesman responded, "It's hard to deal in perceptions. We believe our lease management program and contract provide customers industry-leading flexibility." For example, he said, ICC will

allow customers to upgrade a leased processor and have that box financed from any other, non-ICC source.

As a result — and given IBM Chairman Louis V. Gerstner's vow to do whatever is necessary to clean up IBM's bottom line — some would not be surprised to see something that would have been unheard of even a year ago: a dramatic reduction in the nature of its leasing program.

Some said they believe the cracks have already started forming in ICC's walls. The still-patented unit has taken \$35 million in residual value write-downs since the fourth quarter of 1991, and more than \$60 million since 1992.

For the most recent quarter ended June 30, ICC took a \$12.5 million charge to reduce its work force by about 15%, or 170 people out of the 1,200 employed, through a voluntary program.

ICC revenue for the quarter was \$80.6 million, down 4% compared with the second quarter of 1992. Net earnings were \$105.8 million, down 1.5% from the year-earlier period.

network.*

Okay, you can stop holding your breath. The solution to your toughest networking problems is within reach. Peter Norton's latest lifesaver is a complete set of integrated tools to rescue you from the reduced resources, budgets and timelines that are threatening to sink your network.

With Norton Administrator for Networks you're able to distribute software, meter application usage and inventory your entire network from one central location: namely, your desk. Even if you're managing an organization that's comprised of different network operating systems.

Right from the start, Norton Administrator will begin paying for itself many times over in time savings alone. Of course, the reduced aggravation, frustration, and wear and tear on your running shoes is pretty nice, too.

If you'd like to receive more detailed information via fax, please dial 1-800-554-4403 select option #1 and request document #486. You'll be grabbing hold of a real lifesaver.

# Microsoft to tackle Office support

By Michael Vizard  
REDWOOD, WASH.

Microsoft Corp. will detail later this month a custom installation option for Microsoft Office and set up a support line dedicated to the suite.

The single support line is intended to resolve technical problems associated

with running applications in the suite, which includes the Word word processor, Excel spreadsheet, PowerPoint presentation graphics package and electronic-mail client software. A separate edition adds the Access database.

Meanwhile, Microsoft will give information systems managers the ability to create their own subset of Office for de-

ployment across multiple desktops, stripping out some features from applications and automatically replicating that implementation across multiple desktops.

"We're trying to make it easy for IS managers not to have to get everything but the kitchen sink, so now they can customize the suite and replicate it across

their site," said Mark Kroese, group product manager for Office.

Office already includes a minimum installation option. For example, the suite edition of Office that includes Access requires a minimum of 25M bytes of storage; a typical installation option requires about 45M to 50M bytes; and a maximum installation option for the full suite, which includes every piece of code associated with all the applications in the suite, requires 625M bytes.

## Gain control

Kroese acknowledged that Microsoft, along with other suite providers, has been criticized for the growing physical requirements of suites. The custom option is an attempt to help resolve those issues by giving IS control over the application features it wishes to employ, he said.

"We don't think anybody will be loading the full installation suite [installation] anymore," Kroese said.

In addition to this effort, Microsoft is continuing its campaign to share modules across applications.

For instance, there is only one spell checker and one charting module that all the applications in the suite share, as opposed to each application's having its own implementation.

In terms of customization and shared code, Lotus Development Corp. is pursuing a similar course with its SmartSuite offering, which consists of the 1-2-3 spreadsheet, Ami Pro word processor, Freelance Graphics presentation manager, Approach database and Organizer personal information manager, a company spokesman said.

Like Office, SmartSuite has a maximum installation of 625M bytes and a minimum installation of 27M bytes.

In contrast, Borland International, Inc.'s suite offering, which consists of the Paradox database and Quattro Pro spreadsheet, as well as WordPerfect Corp.'s namesake word processing software, requires a minimum of 8M bytes.

Despite the growing hardware requirements to support suites caused by the expanding list of features in applications, IS managers reported that the benefits of suites outweigh additional hardware costs.

"If you're not buying a suite today, you're crazy. The benefit of Windows is the ability to have integrated applications to create complex documents," said Stacy Meyers, a staff analyst at South Florida Water Management, Inc. in West Palm Beach, Fla.

## PROMIX Software. The Most Important Ingredient In Your Process Manufacturing System.

With increasing needs for automation and integration, process manufacturers find themselves with handfuls of incompatible applications that address only one part of the process. They don't have an integrated information solution that pays attention to the whole process.

Well, now, PROMIX process manufacturing software puts just the kind of control you ought to have, just where you ought to have it. In your hands.

Because PROMIX is a fully integrated series of process manufacturing applications that give you a single, fully-integrated, enterprise-wide management system.

So your integrated quality management information is available for review during every step of the process. You can do finite scheduling based on easily available information from different points in the procedure. You can manage your facility through completely integrated scheduling and control the warehouse so that the right materials are delivered where and when they're needed. And costs are reflected during the process in real time.

It's such a simple concept that, frankly, we're surprised that nobody else did it before. Integrate everything with everything else in the process. Fortunately for us, nobody else did. Fortunately for you, we noticed. And moved to fill the gap. So now PROMIX makes everything you need available in a common format.

When you add to that our completely integrated financial applications, you can give yourself complete information for total control. From raw materials to profit and loss statements.

To make PROMIX an integral part of your process, call Ross Systems. It's one important ingredient you don't want to leave out of the mix.

**ROSS SYSTEMS**  
An Integral Part Of The Process

Ross Systems Inc., 555 Twin Delphin Drive, Redwood City, California 94065 Phone 408.551.1872 Ext. 2400

“ Micro Focus COBOL is doing a great job. Developers know the language, so they can concentrate on the important aspects of the project: the business. ”

Chris Brown and Joe McCarthy of the leading life assurance and annuity firm, USG Annuity & Life,<sup>®</sup> believe the company's success lies in an aggressive, change-oriented management style: creating new product portfolios and delivering them to the marketplace fast.

In the life insurance market, information systems need to be fast and efficient if firms are to remain truly competitive. Watching customers' money means keeping costs down and remaining price-competitive. For USG, PC-based network systems were the answer. USG purchased a packaged application, written in COBOL,

brought it in house and today continues to enhance the services it offers, with imaging and text management.

“ COBOL is doing the job because of the programming resources we could hire, and the direction that Micro Focus has taken it. ”

“ We're leveraging on COBOL's proven strengths but within a flexible, high-performance environment. Micro Focus allows us to structure the environment to meet the needs of the moment. The result: faster market responsiveness, and better quality applications development. ”

“ USG started a few years ago with no systems,

no computers, no agents and no policies. Today, the company has over 100,000 policies in the marketplace and controllable assets of over \$3 billion. Without the Micro Focus PC Development Solutions, USG could never have achieved that level of success. ”

When the world's leading corporations demand “ *A Better Way of Programming*, ”<sup>™</sup> they turn to Micro Focus. For more information on putting the Micro Focus PC Development Solutions to work for you, call 800-872-6265.

# Networth to push envelope with fast hubs

By Joanie M. Wexler  
DALLAS

The game is officially afoot among smart hub vendors with next-generation architectures.

While SymOptics Communications, Inc. demonstrated its just-launched high-end System 5000 [CW, Oct. 4] on the Networld show floor, competitor Networth, Inc. ran a behind-the-scenes prototype of its counter-attack Series 6000, which it said it will announce in late November.

The hub, which will contain multiple high-speed LAN backplanes, including those that support emerging and sometimes controversial 100M bit/sec. Ethernet technology, will also

**Shipping up**  
Networth will soon  
carry over  
communications planes  
designed for the new NSE to  
the core. The planes  
include Novell's  
multiprotocol routing  
scheme, facilities for  
SAA LAN-to-hub  
connectivity, routers  
and dial-up WAN  
connections.

add a high-end PC dubbed the Network Services Engine (NSE) to modules supported by the company's Series 4000 hub, company officials said.

The NSE is a more powerful and versatile take on the concept of Networth's NetWare Application Engine (NAE), a 486-based PC module for the Series 4000. Novell, Inc. and NetWare Licensee Novell's only Novell NSE.

The integrated 6000's NSE PC is not a module but an integrated "drawer" that frees up two of the hub's slots for network connections, explained Tom Klein, vice president of sales. It is 486-based, like the NAE, but has heavy-duty performance, memory and storage enhancements (600M bit/sec. Ethernet technology, will also

The enhancements make the PC-in-a-hub more attractive to Networth customer Darwin Collins, network administrator at the Dallas Area Rapid Transit (DART) authority. DART had no interest in the NSE because the module was not robust enough as a server for the authority's needs, Collins said.

#### Bundling benefits

However, Collins said he likes the idea of bundling a server and a T1 bridge with his hub for several reasons: integrated server and hub management, security and space savings in wiring closets, redundant power supplies for servers because of resource-sharing with the hub and a savings on PC network interface cards, which are not necessary with the PC/hub combination.

The communications services supported in the NSE will not be limited to NetWare, which also appeals to DART. This is because political infighting at DART, which supports 800 networked users across 15 hubs and runs a mixed bag of mainframes, minicomputers, Unix work-

stations and LANs, has barred internetworking from "being dependent on the Novell group," he explained.

Currently, DART uses Alantec Corp. Powerline for high-speed routing among multiple Ethernet and Fiber Distributed Data Interface (FDDI) segments, but Collins said he would likely integrate this function at emerging small- or construction sites where the "\$25,000 to \$30,000" price tag of each Alantec box "would be impractical."

#### Third parties

Networth is looking at developing its own internetworking offerings to run in the NSE, such as bridging, routing and LAN switching. Klein said; however, those options will not be available at announcement time. In addition, products from third parties that have developed to X/T/ATbus, Extended Industry Standard Architecture (EISA) and local bus PC standards would be candidates for the 6000, he said.

A goal for the Series 6000 will be to accommodate 10 separate 100M bit/sec. Ethernet, for which specifications are to be released immediately before the Networth announcement in November, said Michael Smith, Networth's director of product marketing.

Ethernet is a sore point with many industry observers, who are disappointed that the IEEE standards group caved in to two technology camps and is developing two separate standards.

The exact number of backplanes, including those supporting Asynchronous Transfer Mode and FDDI LANs, will depend on those specifications, Smith said. All the new high-speed backplanes will be added on top of the one Token Ring and five Ethernet backplane supported in the Series 4000 hub today, he said.

## Remote user pleas reach vendor ears

By Joanie M. Wexler  
DALLAS

Companies looking to extend the reach of their LANs to mobile, remote and telecommuting users found throngs of vendors eager to accommodate them on the Networld '93 show floor last week.

Remote connectivity products and corresponding gear for conserving wide-area network bandwidth use were heavily in evidence, a sign that organizations are feeling the networking impact of client/server and other wireless distributed computing.

Several firms pushed what are known as "remote access" "ware", intended to tie far-flung users to their home LANs in a way that gives them access to the resources they would have if they were local. New vendors got into the act, including IBM with two offerings from separate business units [CW, Oct. 4]. Meanwhile, players such as Cayman Systems, Inc., at one time focused on niche user populations, branched out to embrace the enterprise with support of multiple LAN protocols.

Most of the remote access products also support several protocols and PC types, and include plans for Point-to-Point Protocol, a protocol that allows interoperability among products across WAN links. They are mandatory features required for enterprise networking, said Charlie Robbins, director of communications research at Aberdeen Group, a Boston consultancy.

But the other half of the equation is the WAN bandwidth that increasing numbers of remote connections

are eating up. "Because line costs are still an issue, people want to get more out of their 56K bit/sec. circuits" rather than upgrading to faster and pricier links, Robbins said (see chart).

Indeed, users did seem reluctant to upgrade: First Madison Bank FSB was visiting Newport Systems Solutions, Inc.'s booth to check out the latest version of its T1 multiprotocol routing WAN compression software. This is because the bank is looking to get more out of its 56K line between LANs at its headquarters here and a regional site in Houston, rather than upgrading, said Brian Kirkwood, a T1 support analyst with network responsibility.

Show attendee Cynthia Mitchell, a software analyst at Argonne National Laboratory near Chicago who runs the government facility's four-city nationwide network, said she was looking at compression for speed and response-time gains to accommodate users accustomed to comparatively faster LANs.

Vendors such as Micom Communications Corp.,

Multitech Systems, Inc., Newport Systems and Novell, Inc. sought to ease some of these WAN bandwidth limitations with sophisticated compression, filtering and protocol prioritization schemes they have built into their WAN interface products.

Debbie Greenbaum, network systems programmer at RSA Restaurant Corp. here, said she is already using Micom's compression-oriented NetRunner to cramp host data, LAN, BSC and voice traffic on a 56K link from here to Dayton, Ohio. She said she is saving about \$20,000 per year compared with a configuration that uses separate voice lines.

Micom introduced a version of its NetRunner at the show that extends this capability from point-to-point-on-point links to multipoint configurations.

Other evidence of bandwidth conservation was a new version of Retix's router software that supports Internet Protocol and Novell IPX protocols over public dial-up Integrated Services Digital Networks (ISDN). It uses a scheme that passes down chatty IPX traffic to keep ISDN traffic loads under the typical four-hour-a-day crossover point where it is more cost-effective to install private links.

# EXACTLY WHAT DO PEOPLE NEED THESE DAYS TO GET THEM TO COME TO A MEETING?

## INTRODUCING ORGANIZER 1.1 WITH GROUP SCHEDULING.

If you've ever tried to pull a group meeting together you know all too well how frustrating it can be. Now Lotus Organizer™ 1.1 Personal Information Manager for Windows™ works across your existing ccMail™ network to make organizing a meeting – as well as organizing your day – easier than ever.

You simply choose who you want to attend from the mailbox list. Organizer shows you a graphical view of busy and free times so you can pick out the optimal meeting time. Then Organizer delivers an invitation via ccMail. Invitees can accept, decline or delegate to someone else – with a single mouse click. Organizer tracks responses automatically. No chasing people

down in the halls. No phone tag. Just the easiest way ever to plan a meeting.

Lotus Organizer with group scheduling takes the guesswork – and the headache – out of meeting planning.

## FOR LAN ADMINISTRATORS, NO OTHER SCHEDULING SOLUTION IS NEARLY SO INVITING.

For starters, Organizer uses existing ccMail directories to simplify installation. Invitations can be sent to anyone on the network, even if they don't

use Organizer. And because Organizer's group scheduler displays a user's availability only, not the entire schedule, security and privacy are protected.

With an on-screen calendar, a to-do list, an address book, a note pad and an anniversary reminder built into one package, Organizer is a powerful personal tool that's fun to use.

Both Organizer and ccMail have exceptionally friendly Windows interfaces – help calls are minimal, and your life is made a little easier.

## ORGANIZER DOES MORE THAN PLAN MEETINGS.

Organizer 1.1 includes all the personal management tools that made Organizer 1.0 the best product of its kind for Windows. Essentially, Organizer is a day planner – a really smart day planner with the ability to link related tasks, names and phone numbers. It is an on-screen calendar, a to-do list, an address book, a note pad and an anniversary reminder, all rolled into one. Organizer will even sound an alarm to remind you of a commitment – like that meeting you're invited to.

Find out more about how Organizer could work for your organization, call 1-800-872-3347, ext. 9167, or visit your Lotus Authorized Reseller. No invitation necessary.

**LOTUS**  
Working Together™

# Hermes to manage Microsoft only

By Elizabeth Horwitt

DALLAS

Microsoft Corp. made it clear last week that its Hermes framework, due out in the first half of next year, initially will manage just Microsoft systems, leaving "foreign systems" and networks that link clients and servers out in the cold.

Instead of embracing those foreign systems, Microsoft will leave it up to its partners, 23 of which were announced at a briefing here last week, to integrate Hermes with their own management of LANs, internetworking devices and other vendors' clients and network operating systems, Microsoft spokesman said.

This differentiates Hermes, which is Microsoft's centralized desktop management software, from Novell, Inc.'s NetWare Distributed Management System (NDMS), also announced last week (see story page 14).

#### NetWare and more

NDMS, while primarily aimed at NetWare installations, will also have the scalability and functionality needed to manage other aspects of enterprise client/server installations, such as LANs and routers, Novell said. The firm said it plans to make NDMS available in three to 12 months.

In contrast, the Windows NT-based Hermes will provide consistent management environment services across NT, Windows, Windows for Workgroups and DOS systems, spokesman said. Services will include configuration, problem management, software distribution and security management.

Like NDMS, Hermes will provide management on distributed nodes — in this case, NT servers — which will perform on systems within their local network domain. Statistics collected over time will be stored in local SQL databases that will be correlated across Hermes management nodes, Microsoft spokesman said.

## Vendors form support alliance

Fourteen major vendors last week pledged mutual technical support in the form of a Technical Support Alliance Network (TSANet) through which they will share information to help resolve multi-vendor support issues.

Announced at Networld '93, the alliance includes 3Com Corp., Lotus Development Corp., Apple Computer, Inc., Banyan Systems, Inc., Hewlett-Packard Co., IBM, Compaq Computer Corp., The Santa Cruz Operation, SynOptics Communications, Inc. and Novell, Inc.

"The definitive beneficiary from the alliance is going to be the end user, who will see faster response times. And companies will start seeing the cost of support going down," promised Dennis Smetzler, executive director of TSANet.

— Michael Piscad

Microsoft is working with leading enterprise management vendors, such as Hewlett-Packard Co., Digital Equipment Corp. and Computer Associates International Corp., Inc., to allow their enterprise management systems to manage Microsoft systems by accessing Hermes services.

Companies such as VisiSoft, SynOptics

Communications, Inc. and Thally Systems Corp. will integrate Hermes' management with their own specialized software. For example, Microcom, Inc.'s LANLord, which does real-time management of NetWare servers, will also manage Windows NT servers via Hermes, a Microcom spokesman said.

Union Bank of Switzerland "has been

waiting desperately for Hermes" for its software metering and updating in particular, said Alain Paeche, head of LAN services for the Zurich bank.

However, the bank was disappointed with a pre-release version of Hermes, which apparently could not automatically distribute different software configurations to different workstations from an NT server, Paeche said. As a result, Paeche's group spent time developing its own desktop management software.

How do you know  
training even works?  
Good question.  
It's time you were  
given a good answer.

Anybody can promise you impressive results from I/T training. And they do.

But wouldn't it be great if a training company would provide hard and fast proof of the effectiveness? Hold that thought.

#### Meet Skill Dynamics.

We've developed a bold approach to training that you've probably never seen.

Our exclusive 7-step approach begins with your business needs and ends with business results.

Our consultants can show you in black and white how, when, where and why your employee training is doing what it's supposed to be doing.

It's based on sitting down with you and mapping out a training strategy that's tied to your own business objectives.

We work with you to ensure that courses deliver the improvements you want in quality, profitability and employee and customer satisfaction.

Our instructors specialize in Enterprise, Midrange

and Personal Systems, AIX, Client/Server Technology and Networking, Application and Systems Development, Languages, and Hardware Service Operations, among others.

If it's a question of I/T training, Skill Dynamics could very well be the answer.

To find out how you can get a free initial consultation on our 7-step approach, or for a free brochure about either our capabilities or our courses and services, call us:

1 800 426-8322, ext. 1402.

**Skill Dynamics®**  
An IBM® Company

## News Shorts

**IBM to reveal client/server aids**

IBM will announce tomorrow three client/server development tools. VisualAge, which helps developers create applications by combining objects easily, is the only one of the three available immediately. The other two packages—HighPoint, an applications generator that runs on both host and PC platforms, and ReDiscovery, which allows developers to make a PC object out of Cobol code on a mainframe—will be delivered within the next year or so.

**Four dealers hit by piracy charges**

Washington-based Business Software Alliance last week filed lawsuits against four PC dealers for allegedly leading customers' hard disks with copyrighted software (such as Windows) without licenses. The dealers sued for copyright infringement were LS Technology Corp. in Parsippany, N.J.; Micro Experts in Saco, Ohio; PC Partners in North Canton, Ohio; and Mayberry Systems in Belleville, Ill.

**KnowledgeWare unwraps tools plans**

KnowledgeWare, Inc., last week announced the company's licensing of R&O GmbH's Rocade repository as expected [CW, Sept. 13], as well as three products that extend the company's Application Development Workbench (ADW) to target high-end client/server development, company officials said. The ADW/Workgroup Coordinator offers concurrent access to multilayer ADW encyclopedias to synchronize data and to support workgroups in LAN-based environments. The ADW/Workgroup Manager, to ship in early 1994, will offer change management, security and impact analysis for multiple encyclopedias. Those multiple encyclopedias will then be able to be stored in the Rocade repository, officials said.

**Faster Ethernet makes strides**

Progress with full-duplex Ethernet switching was in evidence on the Network '93 show floor last week: IBM, Compaq Computer Corp. and switch maker Kalpana, Inc. said they have successfully tested their gear running in harmony. The development was the first fruit of an interoperability consortium headed by hub vendor Cablenet Systems, Inc. and six announced last week. Compaq also said its NetFlex family of 32-bit Ethernet adapters will be upgradable to full duplex with a software driver change.

**New TI chips**

Texas Instruments, Inc. re-entered the microprocessor market last Friday, announcing the 486SLC and 486SSD, eight 486SX-based chips built around a core developed by Cyrix Corp. and 3.5V versions and 3.8V versions in four clock speeds: 33MHz, 35 MHz, 35.5MHz and 40 MHz. The new processors will come in two sizes, one for notebooks and the other for subnotebooks.

**SHORT TAKES** Digital Equipment Corp.'s storage business last week reduced prices by up to 34% on its end-user disk and tape drives... Compaq/Ad Computer Corp. said it has reached an informal agreement with its creditors that could end its Chapter 11 protection as early as Nov. 4.... Forms software company Debraas Corp., in Toronto will make its debut in the communications market this week with the announcement of its Communications Suite. The software suite comprises \$179 Windows-based fax/modem software that contains terminal emulation software for accessing proprietary IBM and Digital host computers and other features such as data compression and virus-checking.

# Apple will sell Windows apps

CONTINUED FROM PAGE 1

small guided tour of some of the piece's most salient features. If a user decides he cannot live without a particular piece of software, he dials a toll-free number and charges the application to his credit card. He is then given a code to unlock and download the application onto his hard drive.

The disks will employ an encryption technique developed by Rainhow Technologies, Inc. Apple has devised a de-encryption algorithm that is specific to each CD so the secret code cannot be passed along.

Users can then negotiate a purchase price based on how many copies of the software their organization will use.

**November ship date**

More than 10,000 Macintosh-based CDs are expected to ship in early November, with a similar Windows-specific Software Dispatch release slated for early next year, Apple officials said.

Because Apple is shipping a relatively small number of CDs, some analysts said they think that, at least initially, Software Dispatch is little more than a token gesture.

"They're trying to tell the Windows community that the Macintosh can coexist," said Lee Levitt, an analyst at International Data Corp. in Framingham, Mass.

But even a half-step toward cross-platform awareness was good news for users. "This is a great move for Apple because they are finally accepting the fact that every device on the desktop is not going to be a Mac," said Robert Anderson, a senior analyst at A. C. Smith Automotive Products Co. in Milwaukee. "We live in a cross-platform world. There's no getting around that."

Although Apple sometimes has a rocky relationship with its resellers, Schmid said Software Dispatch should not hurt sales at retail outlets such as CompUSA because the Cupertino, Calif., company is trying to include them in its plans.

But Levitt said he smells a rat. "I would say that resellers like CompUSA might be getting the short end of the stick," he said.

Some resellers are buying into the concept to a degree.

A CD sampler service akin to Software Dispatch is scheduled to be offered this month by Apple resellers Multiple Zones International, Inc. and Instant Access International.

Their CD, however, will be limited to the Macintosh platform.

A good portion of Apple's early disks will be devoted to lesser-known firms such as Aladdin Systems, which produces the Stuffit data compression utility for Macintosh, or Intuit, Inc.'s Quicken, a money management application for both Windows-based and Macintosh machines.

**Big guns missing**

However, some of the biggest guns in the Macintosh developer community—companies such as Microsoft and WordPerfect Corp.—will not be represented in the initial Software Dispatch release. Microsoft said it was unable to respond in time to meet Apple's initial deadline but hopes to be involved with future releases.

Analysts offered a warning about the efficiency.

"The big players are needed to pull through the smaller players," said Doug Kast, a principal analyst at The Viewpoint Group in Santa Cruz, Calif. "The typical user has confidence that if the big players are in there, the smaller players are OK. If they don't get the big players, the whole program might not make it."

The first issue will include its share of notables, however, including Adobe Systems, Inc., MacroMedia, Inc., Fractal Design Corp., Claris Corp. and Symantec Corp.

**WordPerfect Office electronic-mail system**

Lotus, on the other hand, is expected to position Notes as a backbone server for third-party document management systems by including more sophisticated routing, rules and agents in the Notes server, sources said.

"There's a big split between loose document management systems and some of the sophisticated ones already out there. Notes has versioning, but it's nothing like the check-in, check-out capabilities in robust document management systems," said Brownell Chalstrom, president of Chalstrom Consulting, Inc. in Oakland, Calif.

"Our products focus on cross-application, while a WordPerfect offering is going to focus on WordPerfect documents," said Rhonda Still, marketing manager for Soft-Solutions.

"For us the biggest problem has been educating the market, so this may actually help us," Still said.

However, Frappolo noted that to be taken seriously in this market, the big PC companies will have to support applications from different vendors.

# Document control

CONTINUED FROM PAGE 1

for it from our customers. We're trying to understand what the specific customer need is," said Mark Kroese, general product manager for Microsoft, general product manager for Microsoft.

Short of an outright acquisition, Microsoft is expected to sign alliances with existing providers of document management systems—including SoftSolutions Technology Corp. in Orem, Utah, PC Docs, Inc. in Tallahassee, Fla., and Saros Corp. in Bellevue, Wash.—in order to closely integrate its server technology with their document management system services.

This integration of services will be further enhanced by more tightly linking PC applications with document-oriented middleware services, according to Mike Konneke, vice president of marketing at Saros.

Meanwhile, Lotus sources said the company intends to enhance the ability of its Notes offering to provide robust document management system services that other

companies will take advantage of.

WordPerfect will announce a personal information manager this month that will include some document management capabilities. Later, this effort will be expanded to provide a full-blown document management system effort, a company spokesman said.

"There is a realization that work flow, file retrieval and document management are tools that will be needed on all desktops. The big vendors are seeing that these areas will generate a significant amount of revenue each year and that there is money to be made here," said Carl Frappolo, executive vice president at the Delphi Consulting Group in Boston.

**Using leverage**

In general, Microsoft is expected to leverage existing document management system technology on top of Microsoft Office, while WordPerfect is expected to develop a system that will leverage its namesake word processor and

# Rightsizing? Think Before You Leap.

## Information Builders And Sun Microsystems Give You Rightsizing Solutions With Minimum Risk.

Are you thinking about rightsizing but worried about accessing the data from your legacy systems? How do you make your hardware, operating systems and protocols appear as a single resource to your end users? And, how do you satisfy all these requirements in a client/server architecture?

### A PROACTIVE APPROACH TO RIGHTSIZING

Before you leap into Rightsizing, talk to Information Builders and Sun Microsystems. We understand the problems and the needs of companies facing these tough questions, and have been providing solutions to the Fortune 1000 for years.

Sun Microsystems, the world's leading supplier

of UNIX workstations and servers, offers computing strategies that work with your existing systems. And, Information Builders has the software products, FOCUS and EDA/SQL, to help SPARCstation™, SPARCSERVER™ and SPARCcenter™ users implement productive open systems solutions.

FOCUS, the world's most widely installed 4GL, gives you the tools you need for client/server application development and decision support. EDA/SQL, the data access standard, provides access to all data on any platform.

With Information Builders and Sun, you can design a seamless migration strategy for a structured rightsizing plan—without a major disruption of your business.

### TAKE THE FIRST STEPS

To help you understand the challenges and rewards of rightsizing, the Hurwitz Consulting Group has prepared a white paper, "The Road to Rightsizing: Planning a Proactive Approach." It might be just the right thing to pull you back from the edge and put you in control of your rightsizing strategy. For your FREE copy...

# *“Suddenly, my notebook carries a lot more weight.”*

Hook into an IBM AS/400, and you'll open your notebook to a new world of possibility.

With an AS/400 as your server, you'll have access to the information you need to be more productive. Whether you're running DOS, Windows, OS/2, or Apple's System 7, there's virtually no learning curve for the AS/400; just an interface you're already familiar with. You can even use Novell's NetWare for SAA. And with ShowCase AS/400, you can query the AS/400's integrated relational database and view the results graphically.

The AS/400 has the scalability to grow as you grow, with a maximum of 16 processors and up to 123GB. Plus 20,000 proven business applications from which to choose. A complete industrial-strength systems management for superior backup, data protection, and more.

For reliability, you can beat the AS/400, with hundreds of thousands of systems installed and running. To learn more about how an AS/400 can increase your notebook's stature, call your IBM representative or dial 1 800 IBM-CALL, ext. 1024. In Canada, call 1 800 465-1234, ext. 735.

# Work-flow tools tap SQL databases, Notes

By Michael Lizard  
ALAMEDA, CALIF.

After almost three years of development, Action Technologies, Inc. (ATI) last week delivered its suite of work-flow analysis and development tools for SQL databases from Sybase, Inc. and Microsoft Corp. Support for other SQL databases is

due in the first quarter of 1994, and a Los Altos Development Corp. Notes-compatible version of ATI's ActionWorkflow System software is in beta testing, with delivery expected before the end of the year.

ATI provides four components in its ActionWorkflow System to help information systems managers redesign business processes. These include:

- ActionWorkflow Manager, which automatically monitors and tracks each transactional step during a work-flow process.

- ActionWorkflow Analyst, a graphical tool for creating work-flow processes.

- ActionWorkflow Application Builder, an application generator that shields developers from working with products such as Microsoft's Visual Basic or the

front server, plant servers and mainframes able to all accommodate a data warehouse, given the right software. That's where Bill Inmon comes in.

Bill created PRISM Warehouse Manager, a data warehouse automation tool that's

business trends will be much easier

## BUILDING A WAREHOUSE ON THE SERVER

PRISM Warehouse Manager automates the entire warehouse building process. It trans-

lates, you can track information as it changes over time.

And only PRISM offers 21 Issues Generic Data Models—named after Bill, of course—for specific corporate functions and industries. These templates determine how information

proving indispensable to high-level decision makers. Now he's taken Warehouse Manager one step further, making it fully compatible with IBM, H2, DEC, NCR and most other servers running Oracle, Sybase, DB2 and Redbrick databases.

## ORGANIZED INFORMATION AT YOUR FINGERTIPS

Today's operational databases simply weren't designed for information processing. Typically, data is stored in various applications on several databases. So converting raw data into usable information takes forever.

A data warehouse, on the other hand, stores data in a single, integrated informational database. In one consistent format. And in one easy-to-find location. A warehouse will put years of historical information at your fingertips. Responses to your information requests will be quicker. You'll get a clear picture of overall business activity. And analyzing

data from current operational and legacy systems into accessible, historical information. Data is automatically extracted, summarized and restructured, then loaded into either a mainframe or server environment.

Warehouse Manager won't disrupt operational activity. It simply scans and copies information before moving it into the data warehouse. Data sweeps take little time and are conducted when processing activity is minimal. To modify the warehouse, just change a few parameters. The data is automatically regenerated in minutes, a feature that speeds up prototyping.

## A WORKING WAREHOUSE IN A FEW SHORT DAYS

With Warehouse Manager's Metasource™ on the same target relational database as the data warehouse, information is easy to organize and maintain. Metasource keeps a record of transformations and serves as a historical

is structured within the warehouse. And they eliminate the time-consuming task of developing a custom data model.

Building a data warehouse will take longer than you can afford to wait, unless you use Bill's shortcut. Since Warehouse Manager is fully automated, you won't waste time writing code by hand or learning new languages. And with your staff spending more time analyzing information, less time searching for it, your productivity can increase tenfold or more.

Call us. We'll send our specialists to help you build your own trial warehouse.

Call 1-800-295-2228 for more information about building your own data warehouse in a few short days, or to get a free Tech Topic entitled "Data Warehouse And Client/Server Processing."

PRISM

Notes macro language.

• A set of client libraries, which can be used to link third-party applications to the ATI system.

While the ATI system is said to provide some of the most sophisticated tools for re-engineering work flow, independent consultants note that adopting ATI requires businesses to philosophically adopt ATI's work-flow methodology.

"For a lot of companies this can prove to be a rather expensive adventure, costing tens of thousands of dollars," said Randolph Zahors, president of Workgroup Productivity Corp., a consultancy in Oak Brook, Ill.

However, some companies willing to undertake the expense said the ATI software has provided substantial benefits.

For example, Bankers Trust Co. in New York has been using a non-commercial release of the ATI software running on top of Notes 2.1 in a customer service application that logs inquiries and forwards information to the appropriate decision-maker.

"People are still making the decisions, but when they do, action is automatic. Rather than just faxing information around, they are sending collections of data, including text and images," said Jeremy Keisman, the bank's vice president of global assets technology.

**In the works**  
ATI's planned next-generation  
work-flow system will support  
databases and Notes  
environments, while  
also developing intelligent agents  
capable of interacting  
with more complex  
links.

## Combination approach

Other companies are taking a middle-of-the-road approach that combines the underlying ATI technology with a work-flow approach developed by Quality Decision Management, Inc. in North Andover, Mass.

For example, Syntexis Corp., a consulting firm in Wakefield, Mass., is adopting Quality Decision's software to help track Notes projects across multiple customers. According to project manager David Greene, Syntexis opted for Quality Decision because it provides a more flexible methodology on top of the ATI transaction tracking technology.

"It takes a lot of programming to exchange information between Notes databases in a work-flow model. Quality Decision simplifies this by funneling tasks into the appropriate Notes mailbox," Greene said.

Pricing for the ATI software, which runs on OS/2 servers and Windows clients, is \$6,000 for the ActionWorkflow Manager, \$1,495 for the ActionWorkflow Application Builder and \$495 for the ActionWorkflow Analyst. The client libraries are available for \$2,000, which is an unlimited-use license.

A Microsoft Windows NT implementation is due in the fourth quarter, with Unix support slated for the first quarter.

Staff writer Lynda Radosevich contributed to this report.

## NOT ALL TERMINALS ARE CREATED EQUAL.

Introducing the Dorio plug and play terminal built by Digital Equipment Corporation.

Finally, the scales are tipped in *your* favor in the plug and play terminal market.

Now there's the Dorio™ terminal. A new class of terminal with unparalleled features - and the strength of Digital's world-class engineering, manufacturing, service and support. Dorio delivers the features, reliability, and quality that you've been asking for in plug and play terminals.

Call 1-800-BY-DORIO today! Strike a balance between price and performance. Get all the details on the new Dorio terminal, including our *Hassle-Free-No-Questions-Asked-30-Day-Money-Back-Guarantee*.

# If you're sitting around waiting for Dun & Bradstreet Software to deliver real client-server financial solutions,

Today, while mainframe software companies are scrambling to convert their old packages to something that they can call client-server, there's one real client-server financial solution that's already up and running all over the world.

It's called SeQuel, to Platinum, and it's the only solution designed to really work with the technology.

With SeQuel, to Platinum, what you see is what you get.

# you might need this.

It was created to take advantage of Sybase, so it's incredibly powerful. It has all the security of the best mainframe programs, plus all the ease of Windows. It empowers your people with access to the financial information they need, when they need it.

What's more, it's totally scalable, so it

can grow and change as rapidly as you do. Which is one reason it's been selected by major oil companies, pharmaceuticals and Wall Street firms. And it comes from Platinum Software, the industry leader, with customers all over the world.

For more information about how a real client-server solution can work for your company, just

call 1 (800) 414-7878. Or better yet, call for a demo of SeQuel to Platinum, today.

# ASK Group takes OpenRoad into object race

By Kim S. Nash

SAN FRANCISCO

In its first major object-oriented thrust, The ASK Group, Inc. last week unveiled an update to its 4-year-old ASK/Windows 4GL development tool set.

Although the move leapfrogs ASK over competitors such as Oracle Corp., the

announcement is the latest from database vendors trying to stake claims in the object-oriented arena. Sybase, Inc., for example, outlined its object-oriented strategy in August, including plans to build an object-oriented repository and tools for multimedia applications [CW, Aug. 16].

However, ASK did break ground by

promising to deliver versions of its tools for rival databases from Oracle and Sybase "before they have their own comparable tools out," a spokeswoman said. ASK plans to deliver the products during the next six to nine months, she said.

The tools are part of an overarching object-oriented plan dubbed OpenRoad, which ASK Chairman Pier Carlo Palotti

outlined last week. The primary pieces of OpenRoad include the following:

► ASK/Windows 4GL Release 3.0, a fourth-generation language that previously required ASK's Ingres database but is said to work with Oracle, Sybase and other database management systems. Also, Release 3.0 will sport object-oriented capabilities, such as support for class libraries, ASK said.

► A model-based code generator designed to let users code business rules into software development for smoother change management.

► Consulting services to help users outline and build new applications using the object-oriented products.

Details on two products, code-named Ruby and Amethyst, and a stretch-out for user group sessions in late May, were scant. Although Palotti did not provide features or ship schedules specific for those tools, they will be part of OpenRoad, a source close to the company confirmed. Still under development, Ruby is a graphical report writer, and Amethyst is a graphical user interface-based code generator. An official announcement is expected by mid-1994, the source said.

The new products "will fill a lot of longstanding user requests," said Kitty Weaver, president of the North American Ingres User Association.

**The waiting game.**  
Association members have long wanted strong object-oriented utilities from ASK because such tools from independent software makers do not work well with the Ingres database, Weaver said.

Plus, fewer third-party tools exist for Ingres because the Ingres database lacks the market strength of Oracle or Sybase, she noted. Ingres ranked fourth in worldwide Unix relational database sales for 1992, with about 9% of a \$2 billion market, according to research firm International Data Corp.

However, not all Ingres users were as eager, focused instead on other technologies. "Interest in object-oriented is not as high right now as [it is for] managing all our databases and client/server systems," said Jim Bullock, MIS development manager at Cellular One. The mobile phone company recently installed Ingres databases connecting three locations in upstate New York.

# How Much Availability Is Enough?

Open 23.79 hours out of every 24 sounds impressive.

But it really means that you're out of business for an hour and a half every week.

That's an hour and a half when you're not making sales, shipping orders, or serving customers – because critical business applications aren't available. Not just outages. Late reports, bad response time, and inefficient applications can all mean a loss of business.

To maintain end-to-end availability and keep applications running well, IS teams in four out of five Fortune 500 companies rely on Candle.

Our customers identify and prevent application problems from a central location, using our industry standard OMEGAMON® monitors and OMEGACENTER® products for mainframe automation, performance, and control.

In distributed environments, our clients use Candle products to centrally monitor the availability of critical applications on HP, DEC, RS/6000, UNIX, and LAN platforms. And working with IBM, we're using our unique Candle Technologies™ (CT™) to provide systems management solutions for distributed and client/server AS/400 networks. Because round the clock availability is essential, regardless of platform.

And since our approach concentrates on the availability of business-critical applications, we call it *Availability Management*.

To find out more, please call 1-800-843-3970, ext. 916.

# E-mail breakup may give users more choices

Mix-and-match mail components will work if vendors provide support and ensure interoperability

By Lynda Radosevich

The crack-up of LAN-based electronic mail is under way, and that could mean more choice and more control for users.

Several recent announcements combined with stringy relationships at vendors such as Lotus, Novell Corp., Microsoft Corp., Novell, Inc., and Apple Computer, Inc. will break LAN-based mail clients and servers pieces that users can mix and match, regardless of vendor.

This will give information systems managers more choices for E-mail "back-end" services and let managers and end users purchase the client with the features they like best. It also deviates from the model currently used by E-mail market leaders Lotus' CC-Mail and Microsoft Mail.

For example, to use Lotus' or Microsoft's message, store or directory services, users must also purchase those companies' mail interfaces.

## Feature frenzy

At a messaging forum two weeks ago, roughly 60 participants — including users from large organizations — said they want to purchase E-mail based on an application's features and not have to simultaneously choose all underlying features, said Nisse Burns, president of the conference's hosting company Creative Networks, Inc. in Palo Alto, Calif.

But those users said they want to have a messaging infrastructure that will support more

than messaging. First vendors must endorse standard application programming interfaces (API) for messaging applications, such as e-mailing, scheduling and work flow. And that is not necessarily going to happen. "If you talk to Microsoft, they support MAPI. Period. They are putting their own solution and not cooperating," Burns said.

Source: Forrester Research, Inc., Cambridge, Mass.

In fact, users and analysts contacted last week had several reservations. Among them were whether vendors will agree to standards, provide multivendor support and ensure interoperability.

"I'm cynical about how well vendors that offer both pieces will actually support an open system," said Ray Pratt, an IS administrator at

## Mailbox battles

Vendors such as Novell and Novell-Primed Co. have a hand in this separate back-end server and market because their products usually support a variety of messaging clients. Another, however, is trying to support E-mail without clients.

As part of the MAPI announcement, Apple is also releasing a full set of APIs for CC-Mail some time after the "Sequoia" version of the CC-Mail server ships in the next 12 to 18 months, according to Larry Currie, vice president of Lotus' mobile computing division.

Those APIs will allow competitors to write competing mail clients that fully use CC-Mail. The upcoming Lotus Communications Server, a separate client/server messaging server due in 12 to 18 months, also will fully support competing clients, according to Lotus.

Other evidence supporting a move in this direction includes Apple's announcement last week of its Open Collaboration Environment (OCE), which has a messaging component that will let other vendors' clients use Apple's messaging infrastructure (CW, Oct. 4); and Novell's announcement last week that its Message Handling Service will directly support Microsoft Mail.

Buckbee Meers, a division of RMC Industries Inc. in Cortland, N.Y.

Among the developments enabling the separation of E-mail components is Microsoft's plan to include a fleshed out version of its Microsoft Application Programming Interface (MAPI) in Windows 4.0, which is expected to ship around mid-1994.

"Full MAPI will give other vendors the exact same abilities to the messaging back end as we have," said Tom Evinil, general manager of workgroup strategy marketing at Microsoft.

## APIs fast approaching

Also, Lotus will ship a full set of APIs to CC-Mail some time after the "Sequoia" version of the CC-Mail server ships in the next 12 to 18 months, according to Larry Currie, vice president of Lotus' mobile computing division.

Those APIs will allow competitors to write competing mail clients that fully use CC-Mail. The upcoming Lotus Communications Server, a separate client/server messaging server due in 12 to 18 months, also will fully support competing clients, according to Lotus.

Other evidence supporting a move in this direction includes Apple's announcement last week of its Open Collaboration Environment (OCE), which has a messaging component that will let other vendors' clients use Apple's messaging infrastructure (CW, Oct. 4); and Novell's announcement last week that its Message Handling Service will directly support Microsoft Mail.

## Fault-tolerant market

# Stratus swings layoff ax to trim costs

By Craig Stedman  
MASSACHUSETTS

**A** Stratus Computer, Inc. last week said it is laying off 360 employees, 6% of its work force. The layoffs come as Stratus experiences a decline in earnings due to lower revenue growth and profit margins on its fault-tolerant computers.

The company said it will take a \$3.5 million charge in the just-finished third quarter to cover severance payments. That will further reduce profits for the period, which were already expected to be down from last year's third quarter (see chart).

**800 leave jobs now**  
Stratus let 80 manufacturing and engineering workers go last week and said it would eliminate 30 more jobs by the end of the year. The reduction is the second in three months for Stratus, which cut 30 jobs in July as part of a manufacturing plant consolidation.

According to analysts, improving reliability of general-purpose hardware has reduced demand for the more expensive fault-tolerant systems sold by both Stratus and archival Tandem Computers, Inc., which is in the midst of a major restructuring itself (see box).

Stratus is "having a tough time right now," said Richard Schreiber, president of ATB Associates, Inc., a consulting firm. "Their market segment is shifting on them and forcing them to drive their prices down, and margins are failing as a result."

## Show second half

Revenue in the first half was up 5% over 1992 levels, but Stratus has indicated that second-half business will be below earlier expectations. As a result, the company said, 1993 profits are likely to be "slightly" below 1992's \$8.9 million.

That does not sit well with William Foster, Stratus president and chief executive officer. "We're a company that's always been focused on being very profitable," Foster said. With hardware prices falling, he added, Stratus is "trying to be more efficient."

The layoffs are "totally disconnected" from a program started earlier this year that targets software company acquisitions as part of an effort to diversify operations, Foster said. Stratus plans to spend up to \$100 million on acquisitions, but Foster noted that it has \$470 million on hand and only needs about \$50 million to fund its current operations on an ongoing basis.

Foster said he is looking for revenue to increase 6% to 12% in 1994 as Unix shipments pick up and sales decline for Unix resellers IBM and BSC. C. Olivetti & Co. He insisted that Stratus' business remains "good" in comparison with other vendors.

William Milton Jr., a financial analyst at Brown Brothers Harriman in New York City, agreed. "Obviously their revenue growth has slowed, but they're in pretty good shape relative to others in the industry," including Tandem, Milton said. "Foster is a meticulous planner."

## Stratus' layoff plan

Tandem is also in a downsizing mode because of declining revenue growth and declining profit margins for fault-tolerant computers.

## Tandem's layoff plan

Tandem is also in a downsizing mode because of declining revenue growth and declining profit margins for fault-tolerant computers.

# AT&T's new 800 Service Features and better productivity— there's definitely a connection.

When customers get busy signals, they may hang up—which can make your productivity picture look less than beautiful. Fortunately, AT&T's developed innovative new 800 Service Features that can help your business manage more calls, efficiently and effectively...all without buying and maintaining premises-based equipment and additional lines.

Say, for example, you're experiencing

heavy call volume. AT&T can put callers at ease with a customized announcement letting them know all agents are busy and they'll be connected to an agent soon. It's called "Network Queuing" and it helps your business get more calls through, efficiently distribute incoming calls and effectively handle calling volume peaks. It's an exclusive AT&T feature. You simply won't find a

network solution like it anywhere else. *Network Queuing. More than a sound business decision—a direct connection to greater productivity. For more information about this and other new AT&T 800 Service Features, call your Account Executive or 1 800 222-0400.*

Network Queuing. One of the 800 reasons™ to choose AT&T 800 Service. *AT&T. The Best in the Business.™*

Imagine they're  
software.

Ludwig van Beethoven

Buddy Holly

# With the new IEF for Client/Server they could play in harmony.

**IEF**  
*As revolutionary for  
information systems  
as notes were for music.*

The new IEF for Client/Server is as revolutionary for information systems as notes were for music. Like sheet music does for musicians, the IEF for Client/Server provides common access to structured, rule-based information.

Just as a quarter note used by Beethoven means the same as one used by Buddy Holly, this new application development system provides common meaning to different client/server systems.

#### Model-driven flexibility.

The entire application, including client, server and all communication components are developed and maintained as a whole from within a single IEF model.

What's more, components can be reused in new client/server applications and deployed across different environments for encore performances.

#### Easier training.

Because analysis and design activities aren't restricted by the execution environment, developers can focus on defining and satisfying their individual business require-

ments without worrying about technology constraints.

The IEF for Client/Server allows in a single specification the flexibility to generate complete applications for a variety of execution and database platforms. Which means that you can go horizontally, vertically or cross-enterprise on systems such as Microsoft,<sup>TM</sup> HP,<sup>TM</sup> IBM,<sup>®</sup> Sun,<sup>TM</sup> Sequent,<sup>TM</sup> Tandem,<sup>®</sup> Digital,<sup>®</sup> NCR,<sup>®</sup> Siemens-Nixdorf, Oracle,<sup>®</sup> Informix<sup>®</sup> and Sybase.<sup>®</sup> All without missing a beat.

The IEF for Client/Server enables your business to rapidly respond to change which, in turn, increases your competitive position in the marketplace. TI also offers products and services that effectively reengineer business processes and transition legacy systems to client/server technology.

All so you can extend your company's reach. And enjoy the sweet sound of success.

## C/S B.S.

For some time now I've used this space to strongly advocate the very slow and easy path to downsizing and client/server computing.

In addition, I've taken that message on the road, speaking at various user group meetings and at times causing the host vendor representatives to sit up and relate some emerging client/server disaster stories.

I also predicted (and certainly was not the first person to do so) that there would be a slow, lively but definitive uptake in client/server for mainframe MPPS. This was a result from my own coming to the stark realization that the mission-critical computing on small, cheap hardware platforms is extraordinarily difficult at its best and mindless at its worst.

Lately, when delivering this message in person, I notice a bit more smugness on the faces of many in the audience. They sort of sit back with arms folded across their chests, wryly smiling as if to say, "Yeah, I know what you're talking about. Get the sour taste to prove it."

Afterward, in conversations over coffee, they find solace and comradery, if not commiseration, in one another. Either they've been through some downsizing project that panaced out a whole lot less than planned or know of someone close to them who has.

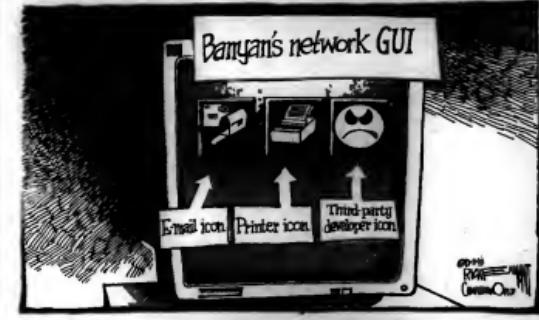

Through it all, a new reality has quietly emerged. When was the last time you heard someone talk about the impending death of the mainframe and not go hooted off the date? Can you recall any big-time client/server vendors announcing the unplugging of their big iron recently? And is it me or does it appear that the time line for functional object-oriented database technology keeps on getting nudged further and further out?

Users are finding all sorts of "surprises" in their client/server projects, the same way a toddler's diaper presents surprises to parents at inopportune times. Users who gashed at the early results of client/server pilot projects often find that the more full-blown implementations falter badly. Updates to larger hosts are chronically unreliable. Lacking the beauty of data orchestration built into a mainframe, client/server database performance is often poor by comparison.

Perhaps the worst part is that when the doo-doo hits the fan and things start to go wrong, it's almost impossible to get any of the untested vendors involved to accept responsibility. Often, the truth is that there's no way of knowing whose product is at fault, and it's just as difficult to know in advance how products will interact with one another in a multivendor environment.

Yes, client/server will happen. So will object programming, richer implementations of SQL databases and aggressive downsizing. And any users who refuse to stay current with the waves of change will be swamped by them. Only it seems users are shifting their expectations toward a new reality spawned by hard lessons that indicate there is no magic bullet in computing, not by a long shot.

## Losing data out the 'Windows'

After reading "Help, Windows is driving me nuts!" (CW, Sept. 12) I really had to give a little chuckle. I don't know why this article should be such a surprise to the public. I am not on any kind of network but run Windows 3.1 on my 486 33-MHz with 16M bytes of memory and a 440-Mbyte hard drive, and I have this problem all the time. I have tried everything from a temporary swap file to a permanent swap file.

What I don't understand is why any business would trust putting Windows on a network or stand-alone. It is the most unstable software that can be put on a computer. Unless you run your work over two or three minutes, you can almost guarantee having it go down.

The advantages of Windows are outweighed by the fact that you can only run one DOS-based or open-source window of one without closing and running an application, but you always have to do this because that will get that lovely little message on your screen that usually says, "You have just lost everything."

*Pat Steiner,  
Irvington, N.Y.*

lions of dollars and years of effort forecast to meet the year 2000, but in its implicit prediction of status quo in the coming years.

We can infer from the forecast that there will be no improvements that reflect the continued plummeting of costs. The doomsday forecast is based on the assumption that there will be no information breakthroughs, no application language developments that will enable us to free ourselves of the stranglehold of obsolete languages and antiquated legacy systems.

Indeed, opportunities abound for new data formats and structures, new application development approaches and new computer functionality in these coming years.

If we fail to seize these opportunities, we deserve the "doomsday" consequences. The costs of these missed opportunities will not be limited to just changing date formats; they will make [writer] Peter De Jager's numbers look like just the tip of the iceberg.

## RPC thread argument is moot

Franco Vitaliano's column "Get the message?" (CW, Sept. 15) contains one factual error that invalidates his entire argument. He tries to argue that the use of remote procedure calls (RPC) causes one to "lock two or more pieces of a distributed application together in a long-distance embrace."

He goes on to say that "Distribut-

ed Computing Environment (DCE) RPC threads do not get around this because most implementations of Unix cannot handle more than one RPC thread at a time..."

Mr. Vitaliano is misinformed. With DCE threads, as with many other (Unix-supported) thread packages, multiple concurrent activities, including RPCs, are supported. It is true that some thread packages do not extend their support for concurrency to applications doing network I/O, but this is not the case with DCE threads.

Thus, using DCE RPC, one thread may make an RPC to a server, while the remaining threads in the application go about doing other work. If there is a good argument for why "network message-passing systems" have advantages over RPC, it has yet to appear on the pages of *Computerworld*.

# Taming wild software country

Steve A. Epstein

**N**obody in Dodge liked to be told what to do, but Matt Dillon was needed every week to protect the citizens from bad guys. Software engineering is a field rife with gun-slinging gunlaws, in all flavors and sizes, who are creating software at a dizzying pace. And we could use some authority to keep an eye on what they are doing.

What developers do and how they do it is a matter of concern to all of us in one way or another. The software they write not only implements procedures for accounting and human resources departments, but controls the operation of trains, airplanes, ski lifts, chemical plants, nuclear plants, space vehicles and cars.

The software engineering industry has some responsibility to assure the safe and proper operation of its products. The last decade has seen considerable progress in quality management and development methods. However, the effectiveness of these methods can be judged only by comparing measurements of the situation before and after. The answer to the question, "How safe is this piece of code?" must be better than, "We feel the code is safe."

It's understandable that endguards are still lacking. Software engineering is a young discipline, maybe 30 years old, and all its methods are not yet in place. When civil engineering was 30 years old, building codes and standards had not yet been invented. And lots of buildings

probably fell down.

This isn't a situation that can be allowed to persist, however. The stakes are too serious. Everyone has tales of programs gone wrong—ones that gave good customers bad credit ratings, lost a day's work, caused the loss of telephone service to a major city or just didn't work quite the way one expected. Some piece of software, somewhere in the world, is doing something screwy right now. Bugs are endemic.

The answer is to begin by implementing techniques from the disciplines of software reliability, software system safety and software risk analysis, including measurement of failure rates over the life cycle of the software, software hazard analysis, software fault tree

analysis and representation of uncertainty with probabilities. The results of these analyses should be clear, concise, reviewable, documented and quantified.

Licensing of software engineers may also be part of the answer. We require other engineers to publicly demonstrate competence in their fields. In fact, most states require hairdressers to be licensed. What about the development team that writes the control programs for high-speed elevators? Shouldn't the public be assured of their competence? Shouldn't an industry-standard safety review be available?

Esther Dyson, in her previous column [CW, Sept. 15], worried that too many processes will become petrified as a result of regulation, that "certified functionality" will become a selling point of software.

Sadly, if left totally to the marketplace, certified functionality will not appear as a feature of software. Safety assurance will not be perceived as a "value-added" without pressure from some sector.

Let's hope that the pressure doesn't come from dictators and lawmen, but from the software engineering industry itself.

**Epstein**, a senior scientific associate at Safety Factor Associates in San Diego, is currently engaged in a risk analysis for the software for the NASA space shuttle main engines.

## Hide the operating system, deliver value

OPEN MIND by Esther Dyson

**C**alling Taligent an operating system and trying to compare it to Microsoft's forthcoming all-object operating system, Cairo, misses the point. Taligent's real value-added is above the operating system.

In the beginning, the idea was to build a full-scale, totally new operating system, which would be object-oriented from the kernel up. And that description, of course, is a misnomer for Cairo, which, like Taligent, is expected in 1995. Still, something like that year, Taligent changed its strategy and separated its efforts into four parts: a small operating system kernel; a set of object-oriented operating system services; part of Taligent's call the application programming model; and a set of development tools.

Taligent will now offer its own optional operating system, but the major part of its work—the application programming model—will be available for any of several operating systems, ranging from IBM's own OS/2 and OS/400 and Apple's System 7 to Unix and, quite possibly, Windows NT. In the new model, the operat-

ing system is hidden from developers and users. Most developers would work on Taligent's generic, extensible application model and get a free choice of operating systems.

Reversing the position employed by Microsoft and others of bringing application functions into the operating system, such as e-mail transport, into the operating system, Taligent moves them back out, not into applications, but into object modules. Taligent's real value lies here in its own cross-platform facilities, implemented as objects that provide services.

Of course, this is not a new concept. Indeed, it's what Steve Jobs should have done after leaving Apple instead of opting to sell an operating system on top of hardware. Why bother to make hardware—or an operating system kernel, for that matter—when other vendors are willing to sell these things at commodity prices? Taligent could do just fine selling the value-added on top of other companies' hardware and operating systems.

Since it is starting more or less from scratch, Taligent has the freedom to redesign the house from the ground up. While technically Microsoft also started Cairo from scratch, that prod-

uct had to fit into Microsoft's well-established (to say the least) business infrastructure. In the business world, Microsoft owns the current model and stands to lose by the new one.

The challenge for Taligent is on the commercial side. People don't buy Microsoft products because of technical interoperability (which they take for granted) but because of the brand name. Customers value what a brand name provides.

Taligent is one of a few with a good shot at overcoming that catch-22. There is no installed base to prevent Taligent from offering an open solution and, thanks to its parentage (IBM and Apple), it has enough marketplace credibility to provide a measure of brand security.

If Taligent is successful, people will complain that they are forced to buy applications built around Taligent's standard. But that's the sort of problem Taligent President Joe Guglielmo would love to have.

Racal-Datacom

The ALM 3226, the new fax-cellular-data portable modem from Racal-Datacom, is proof positive that good things come in small packages. Here's why:

- The only portable modem that operates over standard phone and cellular lines, and provides 14.4 Kbps facsimile capabilities
- High speed fax (up to 14.4 Kbps) and data (up to 57.6 Kbps) transmissions dramatically lower costs
- Cellular capabilities provide immediate access to network data

- Complies with industry standards, including V.32bis, V.32, V.42, V.42bis, MNP Class 5 (data); Group 3 Class 1 and 2 (fax); Racal cellular and MNP-10 (cellular)

- Power options include a 9-volt battery and 110-volt outlet
- Modem Manager™ feature for central control of remote modems

Don't let its small size fool you. The ALM 3226 offers a full range of features, unsurpassed flexibility, and superior performance. It allows even your most remote users to be more productive.

Call us at 1-800-RACAL-55 for information on the ALM 3226 and our complete line of high performance modems. At Racal-Datacom, we'll help you stay connected to your entire network — wherever it happens to be.

## Borland looks for Advantage in support

By Michael Vizard  
SCOTTSDALE, CALIF.

Seeking to make itself more attractive to information systems departments, Borland International, Inc. recently unveiled its Borland Advantage program, which seeks to codify many of the under-the-table policies employed by software vendors into a standard license.

Advantage, the latest move in the ongoing battle over licensing options among PC software vendors, seeks to differentiate Borland from its rivals by factoring an average-use estimate into its site license packages, while also factoring in the amount of Borland software already installed at the site.

In contrast, Microsoft Corp., Lotus Development Corp. and WordPerfect Corp. all offer roughly equivalent volume and site licensing deals, but each of these programs requires IS directors to haggle with vendors to achieve the equivalent of the deals spelled out in the standard Borland contracts.

For example, the state of Texas worked with Lotus, even though it does not have a minimum purchase requirement and does not factor installed base into its standard contracts. This gives the state the top-tier site license deal based on its buying potential, according to Larry Lehmann, fiscal director. Lehmann has purchasing authority for more than 140,000 PCs.

### Same war length

But working with Borland to achieve that same goal was easier, Lehmann said.

"Borland understood our situation in government vs. the commercial sector right away and walked in with flexible terms. With other companies, we would have to negotiate through three or four layers of management to get the same deal," Lehmann said.

"This will be a whole new concept for a lot of companies. We're very, very thrilled about this program," said Dave Newhouse, a microcomputer specialist at the Federal Deposit Insurance Corp. in Arlington, Va.

The Volume Licensing portion of the Advantage program allows a site purchasing more than 500 units of Borland software valued at \$10,000 to qualify for discounts. To qualify, sites can include their installed base of licenses in addition to the licenses they are about to purchase. In addition, Borland will include installed copies of WordPerfect's word processing software as part of this program through Dec. 31.

As a result of Advantage, which will be available through both resellers and Borland, IS

  
SUPPORT

## It's a DOS eat DOS world

By Ed Scieszka

While IBM's Personal Software Products group arguably delivered a better DOS than MS-DOS 6.0 in June with its Version 6.1, the product still faces a hard uphill run to escape niche status.

With the ink just dry on its divorce settlement with Microsoft Corp., Personal Software Products now faces the task of developing and, more importantly, marketing DOS on its own. In the past 12 years, the latter responsibility was largely taken care of by now-archival Microsoft. IBM needed to worry only about providing PC-DOS for its captive base of hardware users.

But now Personal Software Products officials are faced with the inevitable task of persuading hardware manufacturers to dump their long-standing relationships with Microsoft and sign bundling deals with IBM.

### Tough road ahead

Placing PC-DOS 6.1 in the same category as Novell, Inc.'s implementation of DOS, Jeff Tarter, editor of "The Soft Letter" in Watertown, Mass., said, "They need to get out there and aggressively come out some. It is not going to be easy."

While Personal Software Products has signed OEM deals for PC-DOS 6.1 with a handful of second-tier clone makers in Europe and Japan, it has signed only one in the U.S. with Orientec, Inc., a small West Coast maker of systems and peripherals.

One of the factors that swayed Orientec toward PC-DOS 6.1 was that IBM lets the company bundle DOS not just with systems but with per-

ipherals such as hard drives, said Robert Ho, a senior technical consultant at Orientec.

But based on the strength of what they believe are the superior features of PC-DOS 6.1, and what users say are bugs and shoddy design of some features in MS-DOS 6.0, Personal Software Products officials said they think they can tear a couple of major OEMs away from Microsoft.

"A lot of customers took note of the way [MS-DOS 6.0] went out," said Wally Casper, director of marketing for Personal Software Products, referring to those users who lost data due to what users claimed were either bugs or poor design of the product's compression and SmartDrive features. "How comfortable will they be when things like DOS 7.0 get delivered?"

While PC-DOS 6.1's base price is minuscule compared with MS-DOS, most of those customers appear steadfastly loyal. They said the product is much more stable than when MS-DOS 6.0 was released, and they said they like its full-featured, built-in utilities such as the Backup and Scheduler.

"With the utilities they have bundled in, this is more than a DOS users' DOS. It is also a lot cleaner and a little smaller than Microsoft's," said Jim Formay, a beta user and consultant in Brick, N.J.

With Microsoft pushing Windows more than DOS — its upcoming Chicago product will be Windows with built-in DOS functions — some users said they think IBM is doing the right

DOS, page 36

## Arbor bolsters tool for spreadsheet users

By Michael Vizard  
BARTACLAIR, CALIF.

■ Arbor Software Corp. is in the process of delivering Version 3.0 of its Easbase database, which is specifically tailored to allow multiple Microsoft Corp. Excel and Lotus Development Corp. 1-2-3 spreadsheet users to access the same data.

Easbase consists of a proprietary database architecture that can reside on either an OS/2 or Windows NT server.

Arbor Software's Easbase allows spreadsheet users to perform multidimensional analysis of data

Spreadsheet users can then access and analyze data stored in that database, which can consist of up to 17 trillion data blocks, using standard spreadsheet commands. Once accessed, Easbase data is then displayed in a multidimensional context in either Excel or 1-2-3 spreadsheet cells running on Windows, DOS or Macintosh systems.

### Flexibility is key

"We went with Easbase, as opposed to a database like Paradox, because we didn't want to have to learn a whole new language. We can access data using the standard Excel commands," said Tony Regan, controller at Karsen Services, Inc., an oil and gas service company in Dallas.

Karsen currently uses Easbase as a tool for rolling up spreadsheet data from subsidiaries to 10 countries. In addition, flat-file data from an IBM AS/400 system is also loaded into Easbase for analysis.

"For us, Easbase is a lot more flexible and easy to set up," Regan said.

With Version 3.0, Arbor has added easier-to-use data structure tools that make easier-to-define relationships among data, create scripts and assign multiduser access security levels. In addition, Arbor has added support for an IBM SQL interface that will allow users to import data from 20 different PC and SQL databases into Easbase. Other enhancements include 30 additional macro commands, support for Excel running on a Macintosh and TCP/IP.

Pricing for Easbase starts at \$35,000 for a five-concurrent-user license.

## DOS eat DOS

CONTINUED FROM PAGE 35

thing in pushing a DOS solution to the tens of millions of users who still have not gritted to Windows.

"With Microsoft going away from DOS and toward Windows, there is a huge DOS base out there that will be more willing to listen to IBM," said one beta user who requested anonymity.

How much longer that DOS base stays huge remains to be seen. Microsoft claims that close to 70% of all PCs shipping in the U.S. are bundled with Windows and that 82% of users upgrading to MS-DOS 6.0 use Windows.

### Learn from others' mistakes

Although Microsoft has never admitted to any major bugs that resulted in data loss, it recently issued a widespread beta release of its MS-DOS 6.2 that added several new features to MS-DOS 6.0's DoubleSpace compression utility and SmartDrive feature.

Watching the difficulties Microsoft experienced with users and the DoubleSpace compression utility, IBM held off bundling such a utility with PC-DOS 6.1 until it could do further testing.

The company expects to make Adstor, Inc.'s SuperStar Pro compression utility available free to registered PC-DOS 6.1 users later this month.

Personal Software Products officials said they hope to give PC-DOS a more distinct advantage over MS-DOS with a version of its object-oriented Workplace Shell interface sometime early next year. Microsoft is not expected to have a similar update to Windows 3.1 until it ships its 32-bit version of Windows, codenamed Chicago, in mid-1994.

### Workplace Shell for DOS

IBM is working on the DOS version of the Workplace Shell with a five-person start-up in upstate New York called Paper Software, Inc.

The company, headed by ex-BMPC Mike McCue, who worked on OS/2, delivered Workplace 2.0 earlier this summer, giving PC-DOS users a preview of what the DOS version of the Workplace Shell will look like.

Workplace, designed as a Windows shell, takes up only 200K bytes of code compared with the multiple megabytes of code that comprise the OS/2 version of the Workplace Shell.

"We had a design goal to strike a balance between Macintosh-like foldering and DOS-like file management and to do it in a form factor that makes good use of screen real estate," McCue said.

While Microsoft is already promoting Chicago, IBM has so far remained quiet about what it might do in terms of coming up with a competitor. PC-DOS 7.0 will be the first DOS product IBM has created without any technical help from Microsoft.

"Actually, there is a DOS 7.0 competitor we are working on. It is called OS/2," Casey quipped. "It is already 32-bit and multitasking."

## Kodak offers warehouse for stock photos

Eastman Kodak Co. in Rochester, N.Y., has announced the Kodak Picture Exchange, an electronic warehouse for stock photography.

Intended primarily for image-intensive businesses that make extensive use of stock photography, the Kodak Picture Exchange provides 24-hour dial-up access to a library that contains approxi-

mately 100,000 images.

Users can browse through photos on-line and download electronic proofs for \$9 per image. If the photo is accepted, the user must then negotiate a separate contract with the stock agency.

The \$399 enrollment fee supports up to five user identifications. Software kits start at \$900 each, and on-line access

charges are \$65 per hour.

According to a Kodak official, the costs of using the service can be significantly less than photo agency research fees, which typically run \$75 to \$100 per search per agency.

Some 14 photo stock agencies have reportedly signed on to the Kodak Picture Exchange.

## AT 9 A.M. HE DIDN'T KNOW HOW TO WORK WITH A DATABASE.

When Dan Gior came to work on the morning of September 13<sup>th</sup> he'd never used a database before. Two hours later he'd developed his first application — it looks like a fire truck, actually it's a customized inventory and billing management system for the South County Fire Department, San Mateo County, CA.

Dan was using Lotus<sup>®</sup> Approach<sup>™</sup> — the only database designed for fire fighters. And lawyers and doctors and business people. And anyone who isn't necessarily a computer expert.

### INTRODUCING APPROACH 2.1. THE RELATIONAL DATABASE ANYONE CAN RELATE TO.

All the power and functionality in the

world is no good if you can't use it. Approach is expressly designed to be easy. There's no programming to learn. No endless documentation to study. And according to independent

it was just too difficult to get a handle on. That's not surprising considering the 543 page supplemental language reference for programmers Dan would have had to pore

through. Which looks like light reading next to Paradox's 1300 pages of programming instruction.

The difference is that their products were not designed for general business users.

With Approach you have database power that is accessible, and you work in one of four familiar, desktop items — reports, forms, mailing labels or form letters — that look and work just like you expect them to. To help you be productive right out of the box.

Approach lets you get to work right away in familiar, easy-to-understand desktop items. You can generate reports, forms or form letters — you can even print mailing labels to match any specification.

research. The average Approach user produces real results with their database in 2 hours.<sup>™</sup>

This will surprise anyone who has tried to work with databases like Paradox<sup>®</sup> or Access<sup>®</sup>. According to Dan, tried Access and shelved

Approach has won over 20 major industry awards and accolades.

# PCMCIA standard starting to spread its wings

By Michael Fitzgerald

Users holding their breath to see the developing PCMCIA standard stabilize can exhale a little. A couple of recent developments show the standard really will happen, albeit not until sometime next year.

Included among the developments are the following:

- Microsoft Corp. licensed SystemSoft Corp.'s CardSoft product and said it would build PCMCIA support into future versions of its Windows operating environment, including At Work for Mobile Companions, which is due out next year.
- Five hard drive makers — IBM, Maxtor Corp., Seagate Technology Corp., SanDisk Corp. and Toshiba Corp. — complet-

ed a much-delayed agreement to ensure that their PCMCIA hard drives will be compatible with one another and with the PC Card ATA-Attachment standard. Microsoft said its At Work software will also support the standard.

- Toshiba America Information Systems, Inc. said it was shipping Toshiba Card Manager, its implementation of the

PCMCIA Socket and Card Services standards. All of Toshiba's PCMCIA-compatible portables will now ship with Card Manager.

"The PCMCIA cards still aren't compatible enough. You've only got about a 70% recognition rate on cards, and that's still cause for concern," said Jeffrey Hennings, an analyst at BIR Strategic Decisions in Norwell, Mass.

Users contacted said they had largely standardized on single brands to avoid this problem but said that in the future, the prospect of having PCMCIA drives on both portables and desktops will make interoperability more important.

## Power lead

"I could perceive somebody saying [PCMCIA] is how we'll exchange data between the desktop and portable world," said Joe Barrett, lead technical analyst at Whitrepid Corp. Barrett said his users found the power drain PCMCIA cards a rude awakening.

Microsoft's decision to build CardSoft into its operating system will also help advance its Plug-and-Play desktop initiative, according to Paul J. Sereika, director of product marketing at SystemSoft in Natick, Mass.

"This means that PC and PCMCIA cards will all tie together in a single box," Sereika said. "The name will be changed in part because the standard has evolved for beyond memory cards."

## Name-calling

The unwieldy PCMCIA acronym, which stands for Personal Computer Memory Card International Association, or People Can't Memorize Computer Industry Acronyms, according to Andy Saylor, editor-in-chief of "Outlook on Mobile Computing," may soon go away. Sources said the name will be changed in part because the standard has evolved for beyond memory cards.

# AT 11 A.M. HE WASN'T SURE HOW HE'D EVER WORKED WITHOUT ONE.

## NOTHING THIS EASY HAS EVER BEEN THIS POWERFUL.

Just because Approach is easy to use doesn't mean it's not powerful. This is a fully relational client/server database that received a perfect 10 score from PC Week Labs in both "ease of use" and "performance."

And with Approach, access to existing databases is only a mouse click away. Our PowerKey™ technology lets you work with dBASE® Paradox FoxPro® Oracle® SQL, SQL Server and DB2® data in its native format. With no filters and no imports involved.

Letting you transparently share data across multiple databases and all popular networks with unsurpassed speed and flexibility.

## NOTHING THIS POWERFUL HAS EVER BEEN THIS AFFORDABLE — JUST \$99.

For just \$99™ you can experience the database that PC Computing called "the most usable Windows® relational database ever." But this great introductory price for new Approach 2.1 won't last forever. Call 1-800-TRADEUP, ext. 9178 today or visit your Lotus Authorized Reseller to take advantage

of this limited time offer. And discover the powerful relational database expressly designed for end users. Like Don Gior. And you.

## Lotus signs integration pact

By Michael Vizard  
CAMBRIDGE, MASS.

In a move that is expected to signify a general trend in the personal information software arena, Lotus Development Corp. has signed a pact with Cognitive Technology Corp. in Larkspur, Calif., under which it will integrate its Organizer personal information manager (PIM) with a business card reader developed by Cognitive.

Called the Business Card Reader, the Cognitive offering consists of a database that can be linked to a variety of optical character recognition scanners. Once a business card is scanned into the Cognitive database, users of Lotus' Organizer software will be able to integrate that information with data stored in their PIMs.

In general, users said they expect to

see business card readers integrated with a variety of PIM packages.

"I expect to see the people who make business card readers to support a variety of PIM packages," said Jim Whitwright, a program manager at C. J. Segrestron & Inc., a real estate holding company in Costa Mesa, Calif.

In addition to Organizer, the Business Card Reader supports Novell International, Inc.'s Paradox and dBase file formats, and cards can be scanned either individually or in groups of up to eight. Each Business Card Reader can accommodate up to 32,000 business cards, which can be scanned in black and white, grayscale or color.

**Pricing for Business Card Reader**, which is compatible with more than 80 scanners, is \$80. It is available on Windows, with a Macintosh implementation due early next year.

## C-Cube offers MPEG standard

By Michael Fitzgerald  
MILPITAS, CALIF.

C-Cube Microsystems last week announced its VideoRISC Compression Architecture, designed to set standards for real-time digital video compression and decompression in Motion Picture Experts Group (MPEG) format.

Real-time video compression and decompression will enable certain applications, including the ability to receive shows from satellites through boxes that sit atop televisions. These "set-top" devices may be used for a variety of other

applications, including data transfer and multimedia applications.

Observers said the C-Cube introduction was important because it combined image compression and decompression in one format and is programmable.

"Programmability is good because if MPEG changes, all that needs to be done is to have new code downloaded on the chip," said Jake Richter, president of Panacea, Inc. in Lonsdale, N.H.

C-Cube also released two implementations of VCA, the CLM4600 Broadcast MPEG 2 Video Encoder and the CLM4500 Consumer MPEG 1 Video Encoder.

**Lotus signs integration pact**

By Michael Vizard  
CAMBRIDGE, MASS.

In a move that is expected to signify a general trend in the personal information software arena, Lotus Development Corp. has signed a pact with Cognitive Technology Corp. in Larkspur, Calif., under which it will integrate its Organizer personal information manager (PIM) with a business card reader developed by Cognitive.

Called the Business Card Reader, the Cognitive offering consists of a database that can be linked to a variety of optical character recognition scanners. Once a business card is scanned into the Cognitive database, users of Lotus' Organizer software will be able to integrate that information with data stored in their PIMs.

In general, users said they expect to

**MPEG drops Compaq prices**

Marconi Broadcast Co. reduced prices on its Compaq 386 processor and memory boards by up to 15%. Marconi priced its CLM-2025 MPEG-based system with a 10MHz 386SX-based processor with a 40MB 40-pin hard drive at \$6,995, down 15% to \$5,975. An Compaq 486-based Vortex with a 40MHz 486SX-based processor with a 40MB 40-pin hard drive saw its price drop 15%, from \$11,995 to \$11,795.

## Borland

CONTINUED FROM PAGE 35

shops will be able to purchase a copy of dBase IV, which lists for \$795, for \$350 instead if they order between 500 and 1,500 units. That price drops to \$180 per unit for 5,001 to 7,500 units. On the street, dBase IV has an average price range of \$600 to \$625, said Greg Joy, Borland director of sales strategy.

The second offering under Advantage is a Maintenance program that provides automatic upgrades. IS shops can opt to cover part or all of their installed base under this program. The minimum order to qualify is \$10,000.

The third offering is a Site License program, which can be based on the total

number of PCs or software use. This model calls for Borland to confer with the customer on how often people are actually using a software package and then factor that into a concurrent-user pricing scheme.

"The usage pricing is what we're looking forward to. With 28 field offices and five buildings spread out through the

Washington area, we don't really know exactly who is using what software when," Newhouse said.

"Under this program, Borland is letting us count dBase and Paradox licenses as single units. All the big software vendors have a corporate licensing program, but Borland is showing a willingness to work with me on licensing issues," he added.

To qualify for this program, an IS shop must have 1,000 licenses installed as well as a minimum order of \$50,000.

UNIX

## Desktop Computing

### Software

**Micrografx, Inc.** has announced SnapGrafx, automated business graphics software.

According to the Richardson, Texas, company, the product was designed to provide an easy way to produce and use business graphics.

SnapGrafx creates business graphics for spreadsheets, documents, slide shows and overheads with its automated features. Users can automatically size, shape, position and align business graphics with SnapPage, SnapShapes and SnapLines features.

A template gallery provides 20 commonly used business graphic types including comparison, time line, organizational, Venn and pyramid. A chart type from the gallery offers 300 more shapes.

SnapGrafx costs \$295; however, the company is offering a special introductory price of \$199 through Dec. 31.

► **Micrografx**  
(214) 834-1769

**Insignia Solutions, Inc.** has introduced SoftWindows for Unix systems, a cross-platform compatibility product.

According to the Mountain View, Calif., company, SoftWindows provides Unix workstation users with the ability to run virtually any Windows application or utility at 486 PC performance levels.

The product offers full MS-DOS and Windows compatibility as well as built-in network support.

Features include host graphics speed and display quality; full support for Digital Equipment Corp.'s Object Linking and Embedding and Dynamic Data Exchange

among Windows applications.

A single-user license of SoftWindows costs \$249.

► **Insignia Solutions**  
(415) 694-7699

**Debrina Corp.** has introduced Debrina FormFlow, forms processing software designed for developing forms-based workflow automation solutions.

According to the San Jose, Calif., company, Debrina FormFlow utilizes electronic-mail capabilities with links to popular desktop and SQL databases. A built-in Basic-like, high-level language called the Intelligent Form Language allows the product to customize form applications.

Debrina FormFlow is available for 5, 10, 25 and 50 users. A 10-user pack costs \$1,840.

► **Debrina**  
(408) 363-3345

**Learn PC and Lotus Development Corp.** have introduced the Using Lotus Notes 3.0 Video Training Series.

According to Minneapolis-based Learn PC, the series provides self-paced instruction on the complete set of Notes features. Three personal guidebooks, three one-hour videotapes and two practice disks are included.

The product was created for both beginners and experienced users.

Total time to training to proficiency is estimated to be between five and six hours.

The cost of the three-course series is \$295; individual courses are available for \$99.50, and an additional 10 guidebook/videotape option costs \$300.

► **Learn PC**  
(612) 936-0390

**The MathWorks, Inc.** has announced the Matlab Image Processing Toolbox, a product that provides advanced image processing functionality and robust numeric computation in an integrated environment, according to the Natick, Mass., company.

The Toolbox is based on Matlab's visualization and computational tools and allows users to manipulate, visualize and analyze images and two-dimensional signals. Matlab can be used for applications that include medical diagnostics, astronomy, industrial inspection, laboratory data analysis, electronics design and remote sensing.

The Image Processing Toolbox requires Matlab and the Signal Processing Toolbox.

Pricing begins at \$995 for single-user microcomputer copies.

► **The MathWorks**  
(617) 633-7475

**InterSolutions, Inc.** has introduced the Tax Solver.

According to the Needham, Mass., company, Tax Solver is a program that lets users examine the effect of any tax-saving strategy within a DOS or Windows spreadsheet.

Tax Solver employs the file linking, graphics and "what if" capabilities found in Microsoft Corp.'s Excel and Lotus Development Corp.'s 1-2-3, providing users with an assortment of ways to search for saving taxes.

Our hardware and forty-seven InterSolutions Series-approved forms and schedules are provided.

Individual, business and professional modules are available.

Pricing ranges from \$99 to \$495.

► **InterSolutions**  
(617) 449-8222

### Hardware

**Zenith Data Systems** has added six models to its Z-Note line of notebook PCs.

The Z-Note+ notebooks offer advanced video technology, 25-MHz and 33-MHz Intel Corp. 1486EL microprocessors and increased hard disk capacity, the Buffalo Grove, Ill., company said.

Features include preloaded network software, a high-speed communications port, power management, simplified desktop connections, security and a 200M-byte hard drive.

NotePoint, a portable two-button, Microsoft Corp. Mouse-compatible pointing device, is standard with all of the models. Prices range from \$2,599 to \$4,599.

► **Zenith Data Systems**  
(708) 808-5000

### Product shorts

**ViaCrypt** has announced ViaCrypt POP, a high-security public key message encryption program designed to protect electronic-mail and data files. Transmitted messages or exchanged files are secured against unauthorized readers, and the program provides digital signatures, data compression and key management. Cost: \$199.95 for a DOS single-user license, \$699 for a five-user license and \$1,349.95 for a 25-user license. ViaCrypt, Phoenix, (402) 944-0777.

**InFocus Systems** has introduced Project 500, an LCD projector for portable, presentation-quality presentation of audio, computer graphics and video images. The product integrates a full-color, active-matrix display, projection optics, light source and audio system and is compatible with most PC and Macintosh computers. Cost: \$6,995. In Focus Systems, Tualatin, Ore. (503) 692-4995.

If only  
it were this simple.

Linking UNIX systems to IBM networks can be a challenge. You can't just connect the dots. There are many issues to consider:

- Do you have a traditional SNA/DCP network, or do you use other technologies such as X.25, Token-Ring, TCP/IP, and satellite communications?
- Do you process interactively (3270), in batch (MIE), or both?
- Are your UNIX systems linked to LANs? Are there SNA gateways for these LANs?
- Do you use program interfaces such as HLLAPI, APPCLIB, and LU0/LU1?
- How do you manage your networks? How will you distribute programs, files, and data to your remote UNIX systems?
- How will your network evolve in the future?

CLEO can help you sort it all out. We're experts in UNIX-to-IBM connectivity. Our products have been proven in over 100,000 worldwide installations.

Our free "Solutions Guide" clearly and concisely explains your major UNIX-to-IBM connectivity alternatives. Easy-to-understand configuration diagrams help you match the right solutions to your needs.

To order your copy, call 1-800-333-2534. Or clip and mail us this coupon.

## Foolish feud

Just how difficult is it for two rivals to cooperate for the benefit of their customers?

Novell and Microsoft recently broke off their alliance to develop a NetWare redirector for Microsoft's Windows NT.

Microsoft instigated the break by announcing it would provide its own redirector because Novell was taking too long to bring out a full-function, general-release version of the codeveloped product. Users were expressing impatience with the ongoing absence of a full-function redirector, according to Microsoft.

A prerelease version of Novell's redirector has been available on CompuServe for months now; however, it still lacks a few major capabilities, as Novell spokesman admitted (CW, Sept. 27).

What will users gain from buying Microsoft's product? A few months at most, Novell says.

### Petty fight

This falling out between the two vendors "is stupid," says Louis Kahn, chief of network operations at the National Immunization Program in Atlanta. "They need to work together; they need each other."

Having two vendors to choose from is likely to mean reduced options, Kahn says. "I wager Microsoft will support the NT environment better than Novell, and Novell will be better at interfacing with NetWare. For users, it's a catch-22."

Microsoft's redirector supports print and file services on NetWare 3.11 and NetWare 4.01 services through bidirectional emulation, a spokeswoman says. Novell's redirector lacks support for key Microsoft clients such as NT, including Windows, Winsocks and DOS.

Novell says most of those features, with the possible exception of virtual DOS support, will be in the initial release. The company

# Wireless LAN barriers fall

By Lynda Radosevich

A development in wireless LAN technology announced at Network '95 may smash that technology's current bandwidth limitations, and several other recent developments point to the momentum wireless LANs are gaining.

"This wireless stuff is really beginning to catch fire, but we are at the very beginning of the stage here, like PCs were in the 1970s," said Craig J. Mathias, principal at Parrotel Group, a consulting firm in Ashland, Mass.

Canadian start-up developer Wi-LAN, Inc. in Calgary, Alberta, said it will deliver in the first quarter of 1996 wireless adapters that support an aggregate data transmission speed of 20M bit/sec. for computers using up to 1.5M bit/sec. of bandwidth each. The adapters use Ethernet-compatible frames and can interoperate with Ethernet, according to the company. Current wireless LAN products are limited to share a maximum of 5.7M bit/sec. (CW, Sept. 13).

While analysts and users briefed on the technology said it is technically feasible, they believe it will be difficult to deliver. "I'm dying to see it," Mathias said.

### Increased bandwidth

If successful, the Wi-LAN wireless will address a major wireless LAN shortcoming: limited bandwidth.

"Up until this point we've had to put up

with a little less bandwidth as a trade-off for using wireless," said Capt. Todd Pittman, a senior project engineer at the U.S. Air Force's Command Control Communications and Computer Agency in Scott Air Force Base, Ill. "As we continue ongoing wireless LAN research, we will look at this because of the high speed."

Wi-LAN's adapters will use a form of direct-sequence spread-spectrum technology called "code division multiple access," which assigns a code to all bits, scrambles and combines individual bits into a string of bits, transmits encoded strings over a broad spectrum and decodes them at a receiver. This is necessary because it helps reduce interference in the 922 to 925-MHz frequency range in which Wi-LAN operates — an uneconomical space with interference from cellular phones and other devices. Instead of sending information over one channel, Wi-LAN will send it over multiple channels simultaneously.

"It's kind of like stringing multiple wires to a single user rather than one wire," Mathias said.

The Air Force is interested in wireless networks for deployable LANs that can be set up in the U.S. and shipped abroad with a division. Pittman said. For that application, the 2.4- to 2.453-GHz range is best because most governments allow radio use there.

Wi-LAN plans to move to that range

shortly after shipping its original product in the first quarter of next year, according to Haim Zaghbi, Wi-LAN co-inventor.

However, more than speed, Pittman said distance was his biggest concern. At an operating range of 300 unobstructed feet, the Wi-LAN wireless likely does not reach far enough for Air Force applications, which need ranges of 700 feet and up.

Wi-LAN will cost \$1,400 per adapter. Other product specifics include a transmission speed of 20M bit/sec., a radius of 90 obstructed feet or 300 unobstructed feet, compatibility with the Ethernet protocol, a frequency range of 902 to 925 MHz and patented encryption.

### Other announcements

Meanwhile, San Jose, Calif., start-up Wireless Access, Inc. recently announced a wireless PCMCIA card for Hewlett-Packard Co.'s HP 100LX and Tandy Corp.'s Z-Series. The adapter will sell through distributors such as SkyTel and MobileComm in January for around \$400.

• Proxim, Inc. and Raytheon Co. have announced joint development of an integrated circuit said to reduce power consumption and size requirements and increase transmission ranges for wireless PCMCIA-based networking products.

• Fujitsu Personal Systems, Inc. said it will employ Proxim's wireless technology in its Padline, a pen-based device used for data collection in warehouse inventory and field sales force automation. The device combines the radio transmitter and wireless adapter to increase mobility.

• De Viced Systems, Inc. announced at Networld a partnership with RAM Mobile Data and Business Networks Ltd. to provide wireless messaging for Novell, Inc. Message Handling Service users.

# Unix servers speed emergency response

By Thomas Hoffman

MINNEAPOLIS

Until recently, the computer-aided dispatch systems used by the city of Minneapolis' Emergency Communications Center (ECC) could initiate a response to a fire within 30 to 60 seconds. Although those response times were acceptable, improvements were needed to enable the police and fire departments to respond faster to emergencies, where lost seconds can mean lost lives.

Starting last June, the ECC began replacing its overburdened AT&T 382 minicomputer-based

computer-aided dispatching systems with a set of NCR Corp. 3550 Unix-based servers that has since slashed the time it takes to launch a fire response to less than 20 seconds, according to Paul Wallin, the ECC's technical systems manager.

"The new technologies that we have implemented have shaved significant chunks of time off the alerting phases," said Jeff Nelson, assistant director at the ECC. Plus, he said, the older 382 minis crashed frequently, resulting in extended periods of downtime, which has since been resolved by replacing the minis with more reliable NCR servers. "Now the only

downtime we have is scheduled," Nelson said.

Contributing to the delayed emergency responses were the disk I/O bottlenecks that were straining the performance of the AT&T 382 minis, according to Kevin Herboldt, a network software engineer at the ECC. Herboldt said the 382 minis, which ran under the Unix V Release 5 operating system, typically ran six to eight jobs on the load queue, or twice as many jobs as they were designed to handle.

Furthermore, retrieval and transmission of historical information from the Oracle Corp. Version 6.03 relational database management system was slow because Oracle 6 is a cross-platform database; its data structure was not native to Unix under the 382s.

Oracle servers, page 46

# See Your Customers As Individuals, And You Could See A 15% Increase In Revenues.

## No One Offers Better Ways To

You can never know too much about your customers. And with conventional mainframe systems you won't. Only A&T/NCR can give you the processing power to extract individual customer profiles from the detail data that already exists in your enterprise. And the servers and networking power to move that information wherever it's needed.

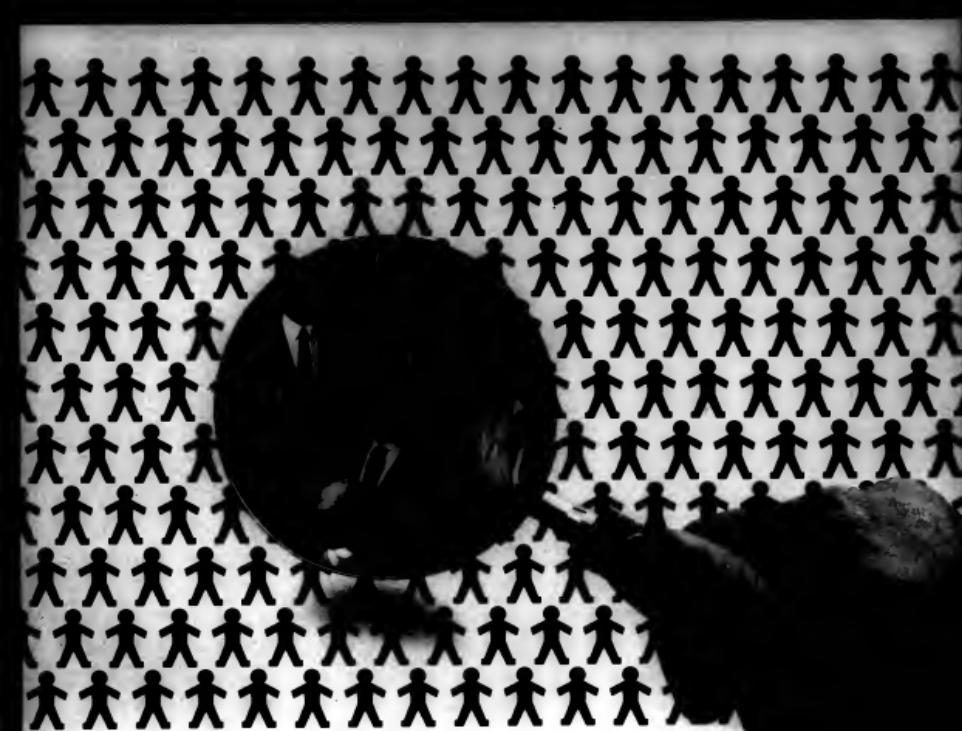

*"The ability to manipulate large databases, analyze data, and get information out quickly to the people who need it gives us a number of advantages. We gain better insight on how to manage the railroad, save money because we are better able to deploy assets, and ultimately improve customer service."*

Joyce Wiens,  
Chief Information Officer,  
Union Pacific Railroad

### BETTER KNOWLEDGE OF YOUR CUSTOMERS CAN MEAN A BETTER BOTTOM LINE.

We can help you understand not only who your customers are and what they are doing, but what they're most likely to do *next*. So you can create specific marketing programs for each customer segment. Better sell and service existing customers. And develop new ones.

That can mean higher customer satisfaction and a better bottom line. In fact, our customers report revenue increases of as much as 15%.

## Get Closer To Your Customers.

### NEW LEVELS OF POWER FROM A NEW KIND OF INFORMATION COMPANY.

No other company in the world offers so many solutions for capturing data and turning it into actionable information. From mobile PCs, through the world's broadest, most powerful family of midrange servers, to massively-parallel processors.

And no other company can match our global expertise in communications and networking. Once the information is generated, we can help you move it anywhere in the world, fast.

To get to know your customers better, phone 1 800 CALL-NCR today. We can help you implement the breakthrough applications that will help you thrive in the future.

# Put a sentry on your LAN

By James Daly

In the unending buzz of most corporate workplaces, interruptions that call users away from their desks or offices are common. Many people do not always stop to secure their data or turn off their machines before departing.

That is a big problem for network security administrators. Not only are shared resources tied up unnecessarily, but open files are also left vulnerable to anyone who happens to be strolling by. That could spell big problems as LANs grow in size and complexity.

NetSentry in Houston is promising relief from this administrative nightmare with NetSentry, an application designed to guard Novell, Inc. NetWare LANs from unauthorized use in both DOS and Windows applications.

LAN administrators can automatically log out idle workstations or configure NetSentry to blank a PC screen after a period of inactivity. The user is then required to re-enter his NetWare password to resume.

Network administrators said they are forever bugging users to log out when they leave their workstations. Not only is this a smart move security-wise, but it also frees up network resources and soft-

ware licenses. At first glance, the easy way to accomplish this might be to simply log out inactive workstations.

But that could mean trouble. Mike Avery, a network analyst at Texas' Department of Human Services in Austin, who helps manage 650 file servers with 12,000 programs, said this causes big problems because database files are left open with transactions in an undefined state.

"We can't back up open files, so in the past, we've had to blow these users out of the water to do a backup, which always annoys them," Avery said.

#### Don't touch that button

Further, LANs sometimes have applications (such as those performing real-time data acquisition) that should never be shut down. Other applications, such as accounting programs, require user intervention. And then there is the question of saving your job. One never wants to log off the box.

However, this must be arranged in a flexible manner so that a shutdown is orderly. Open files must be closed and applications terminated properly, said John Tuney, vice president of technical development at NetSentry.

NetSentry uses a single text file for ad-

ditional licenses. At first glance, the easy way to accomplish this might be to simply log out inactive workstations.

But that could mean trouble. Mike Avery, a network analyst at Texas' Department of Human Services in Austin, who helps manage 650 file servers with 12,000 programs, said this causes big

# Horwitt

CONTINUED FROM PAGE 41

also promises that its redirector, when it finally comes out, will support "all the advanced services, like packet burst, and our own security and authentication mechanism."

With the breakup of the alliance, the two rivals have regressed to petty insults. Microsoft accuses Novell of holding up the works. Novell, in return, claims that its delays were due to Microsoft's repeated changing of the NT kernel and implies that Microsoft did not freely provide it with information about those changes.

This is not the only instance of these two vendors failing to live up to their promises and thereby hurting their customers. They continue to bicker about how Microsoft will license from Novell the code it needs to link the next version of Windows for Workgroups to NetWare.

ministration. The file defines users, groups, node addresses and applications that should never be logged out and can list the keystrokes or series of steps required to shut down individual applications.

Users can also configure NetSentry to automatically run alternate programs

It's not that the two companies are generally uncooperative; both have reputations for working well with partners and for being aggressive about generating third-party support, as evidenced by the very few partner announcements each made at Network last week.

As a result of this fracas, however, users lose their chance to gain a product for linking NT clients to NetWare servers that is based on the two vendors' unique fields of expertise. Microsoft and Novell also lose because easy mixing and matching of their respective platforms would give them the opportunity to capture each others' customers.

In fact, in a situation like this, everyone loses.

There's still a chance for reconciliation. Word is, the technical staffs from the two companies worked together quite amicably. How about it, guys?

Horwitt is a Computerworld senior editor, networking.

# This will rock the com

## Audio. Scanner. Floppy. 165,000 Xstones.

The new line of HP ENVIZEX stations is shaking other X terminal makers with its sophisticated features, raw speed and low prices.

It offers unsurpassed multimedia readiness and PC interoperability, with an internal floppy drive, scanner support and CD-quality audio. A selection of local clients are also available.

Typical cost: \$4,695\* for the 165,000 Xstones, 19" color X station. No wonder we're the world's #1 X terminal vendor! For more details, call 1-800-637-7740, Ext. 7881. In Canada, call 1-800-387-3867, Dept. 2306. Then get your company on a roll.

 **HEWLETT

## Unix servers

CONTINUED FROM PAGE 41

and thus suffered performance hits, Herrboldt said. The Oracle database housed historical information that the ECC would relay to police and fire units, such as whether emergency materials were located at a fire site. The ECC transferred the historical background through a radio-based communications network to more than 240 police, fire and rescue vehicles equipped with Electromon Automation mobile data terminals.

### Replacement parts

The ECC tackled its I/O problems with three sets of replacement technologies. The agency started by replacing three AT&T 3B2 machines with speedier NCR 3550 server units that are configured with two NCR 6296 disk array subsystems to ease storage constraints caused by bandwidth.

Since replacing the computer-aided dispatch mini in June, the ECC has begun implementing an NCR 3550 to replace the 3B2 that processes messages to its remote emergency units. That system should be fully operational by the third quarter of 1994, according to Herrboldt. The ECC has already replaced the com-

puter-aided dispatch backup machine with another NCR 3550 server.

The ECC also replaced the Oracle database with an Informix Software, Inc. Online 5.0 RDBMS which, unlike the Oracle system, runs native on Unix, thereby improving the performance of its new Unix V Release 4 operating system, Herrboldt said. In addition, he said the Informix database is easier for the ECC's three-person technical staff to maintain.

Even though the additional storage systems have had no visible effect on system performance, Herrboldt said they have already proved their worth.

"One of the biggest impacts we've had is in the retention of information, so we're able to keep more historical information available to police and fire units than we were able to before," Herrboldt said.

The new equipment, including hardware, database licenses and porting costs for the dispatching applications, has set the agency back \$1.5 million. But these costs will be partly defrayed by a reduction in hardware maintenance.

The agency had been doing out \$68,000 per year in hardware maintenance for the three AT&T minis. Now, hardware maintenance has been cut to \$38,000, a \$30,000 savings, for the three NCR servers and the two disk subsystems.

## Briefs

### SPARC chip partners

Sun Microsystems Computer Corp. said it has expanded its partnership with Texas Instruments, Inc. in Dallas to build the next generation of SPARC RISC processors. TI will now be more closely involved in the development and manufacture of the 64-bit UltraSPARC-I chip, which is expected to have performance levels of at least 300 MFLOPs. Sun also revealed an early-access program that will give systems vendors their first look at UltraSPARC prototypes in November. TI has shipped about 200,000 of the roughly 1 million SPARC chips installed worldwide, Sun said.

### Antivirus on the server

With the increasing reliance on servers as keepers of mission-critical data, McAfee Associates, Inc. recently booted up its Network Antivirus software for Novell, Inc.'s NetWare file servers. Version 1.5 now detects 2,017 known file server viruses and includes added performance and systems management features, such as improved scanning speed and a redesigned interface, according to

McAfee. The software costs \$495 and includes two years of free updates.

### Databases for NT

Post Software Corp. and XDB Systems, Inc. recently announced Microsoft Corp. Windows NT versions of their object-oriented databases. Post said it plans to ship its product by the fourth quarter of 1994; XDB previewed first-quarter 1994 delivery.

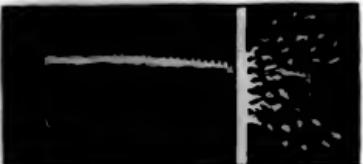

### Printing partner

Fujitsu Computer Products of America in San Jose, Calif., recently introduced a \$600-dot/in. printer for workgroups that need to output ordinary documents and scanned images. The PrintPartner 101 Imaging Printer is rated at 10 pages/min. and uses on-board image compression technology that automatically detects and decompresses image files such as TIFF Group 3 and 4. Because decompression occurs at the printer, network bottlenecks are avoided, Fujitsu said. The printer costs \$2,800. Fujitsu will also offer through October a complementary copy of TextBridge, a Windows-based optical character recognition product from Xerox Imaging Systems, to buyers of its ScanPartner 10 scanner.

# INTRODUCING THE WORK FASTER, BREAKS, AND ACTU

**DESIGNED AND CONFIGURED TO WORK HARDER AND FASTER.**

This is much more than just another new line of PCs. These are role models for everyone in your office.

Dell's new OptiPlex™ PCs are serious, hard-working, hard-core business machines, designed to perform in the workplace.

Our accelerated local bus video kicks all your standard workday applications into high gear. Our systems are up to 16% faster than our major competitors' PCs!

Hard-working,  
dedicated, flexible.  
A few qualities to look for  
in a new employee.

Every OptiPlex system also features advanced Dell® optimized Windows® display drivers. We also give you the ever popular burst mode memory transfer and block mode IDE transfer. (Translation: things go faster.)

And to spare you the usual set-up hassles, we'll have your PCs ready to run, right out of the box. You can have your choice of six network interface cards factory-installed. We'll also be quite happy to install your

We give you up to 16% faster overall application performance than our leading competitors.<sup>1</sup>

**EASIER TO MAINTAIN, SO YOU  
GET BACK TO WORK FASTER.**

Nothing's more important in business than the ability to quickly bounce back from adversity. So we've made our

We offer guaranteed five-minute response to calls, 24 hours a day. See, someone does work longer hours than you.

board. Meaning no cards to remove or cables to disconnect or hair to pull out.

In fact, you'll find that our whole company is easy to use. Dell offers a unique service plan—our SelectCare™ program. You can pick and choose from a comprehensive menu of service options that includes everything from an optional 5-year parts and labor warranty to a self-maintainer plan. The bottom line is, you pay only for services you want or need. And not a cent for those you don't.

It's this kind of service and support that has made Dell the winner of virtually every major customer satisfaction survey in the past five years. It's also earned us a place in over two-thirds of the companies in the **FORTUNE 500®**.

And having picked up over \$2 billion in worldwide sales, we think we'll keep it up for a little while longer.

With our embedded diagnostics you don't have to push hard to get to the root of a problem.

# WORKAHOLIC PCs. WORK, TAKE SHORTER HOURS. PLANNING AHEAD.

## READY TO GROW AS YOUR BUSINESS GROWS.

There's one more thing we built into these PCs that is indispensable to any successful business. Foresight.

With an OptiPlex L system you can easily upgrade from three to five slots, and from three to five drive bays. The entire chassis upgrade usually takes but a few painless minutes. OptiPlex systems also feature an easy BIOS upgrade—by way of flash RAM so there are no chips to remove.

With the system's embedded diagnostics located in the BIOS as well, that too is an easy upgrade.

What's more, you can add up to

If you want them to work even harder, no problem. All systems are upgradeable to Pentium Overdrive.

128KB of cache for memory-intensive applications. All systems can also be upgraded to Intel's mighty Pentium® Overdrive® processor for faster system performance.

We suggest that you call us soon. With hard-working business machines like these out there, you might want to bring them on board before your competitors do.

# AST courts small workgroup market

By Stephen P. Klett Jr.  
IRVINE, CALIF.

In a bid to stake a claim in the Novell, Inc. NetWare-based segment of the server market, AST Research, Inc. last month unveiled a server family aimed at small workgroups of 50 PCs or less.

Premmia MTS targets a large base of potential customers; market research firm International Data Corp. (IDC) estimated that 65% of LANs in the U.S. are based on NetWare. AST's server offerings previously consisted of midrange and high-end machines.

"With Premmia, AST has become much more aggressive in the server market, effectively filling its product line," said Steve Franke, an analyst at IDC in Framingham, Mass.

Premmia MTS ships with either a 33-MHz Intel Corp. 4340DX or 66-MHz 486DX2 microprocessor, six Extended Industry Standard Architecture (EISA) expansion slots, six drive bays, 8M bytes of RAM, an integrated drive electronics adapter, 200-W power supply and two serial ports for roughly \$2,600.

The following features are available as options: fast SCSI-2 adapter, 128K, 256K or 512K bytes of cache; up to 128M bytes of RAM and a Pentium upgrade listed for February.

AST also announced a midrange version of Premmia, called the Premmia SE, with 11 drive bays, eight EISA expansion slots and optional support for up to four SCSI-2 controllers. Prices start at \$2,350.

In conjunction with the Premmia, AST is recalling the company announced Pentium availability for its Manhattan supercomputer. The symmetric multiprocessing machine supports up to five Pentium processors and is positioned as a minicomputer alternative or application server for Fortune 1,000 firms.

Manhattan houses up to 448M bytes of error correction code memory and eight EISA adapters. It offers redundant power supplies and supports RAID Levels 0, 1, 5 and 6 internally. Prices start at \$26,900. Existing Manhattan customers can upgrade to Pentium by adding a processor board for approximately \$5,000.

While AST's price points are less than those of Compaq Computer Corp., Fran-

ke said AST has work to do in the systems management area. "AST's machines don't have all the bells and whistles that Compaq's do, such as system management features and redundant hardware components," she said.

Beefed-up systems management offerings such as remote management and automation are not yet available in February 1994, said Michael Bresnoki, product manager for AST's server line.

Bresnoki said he expects Pentium to spark Manhattan's sales, which have not been quite as brisk as expected since it started shipping in January.

Eico Thermoplastic, Inc. has not been waiting for Pentium with bated breath, but it is intrigued by the upgrade offering, according to Michael Person, a controller at the Mishawaka, Ind., firm.

A leading supplier of injection-molded plastic parts for the automotive industry, Eico purchased a three-processor Manhattan to run its mission-critical manufacturing operations last April. The server replaced a uniprocessor machine from Compaq that "was 95% maxed out," Person said. "Manhattan's biggest benefit has been speed," he added. "We've seen a performance increase already of 80%, and it is logical to assume Pentium would add to this figure."

## Briefs

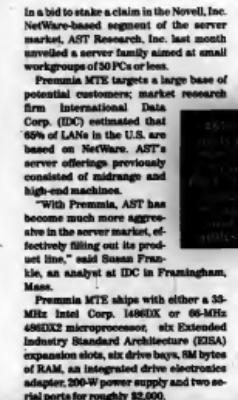

### Oracle picks NCR

Database management software vendor Oracle Corp. has awarded NCR Corp. a \$1.5 million contract to develop Oracle Systems 2000 workstations and servers at each of Oracle's 10 major field offices in the U.S. The NCR systems will be used for development, prototyping and training for all Oracle products, including the Oracle 7 Cooperative Server database, Cooperative Development Environment and Oracle applications. In return, Oracle will provide copies of these products for use in NCR's U.S. demonstration centers.

### Sun milestone

From Microsystems, Inc. said this month that it had shipped its 1-millionth computer, a SPARCstation 10 workstation, to its Milpitas, Calif., factory.

The workstation was presented to Python Ltd. Chief Executive Officer Richard Roberts, whose firm makes many of the SPARC RISC processor chips used in Sun's system products.

## Workgroup Computing

Innovus, Inc. has announced that Legato System, Inc.'s NetWorker software will be available for Hewlett-Packard Co.'s HP 9000 PA-RISC servers.

NetWorker for HP 9000 provides network-wide backup and recovery services for multivendor networks.

Hamilton, Ontario-based Innovus claims that Legato NetWorker is the only enterprise-wide software application that protects files on popular desktop systems and network servers when a file is damaged or destroyed.

Support is provided for a range of Unix clients including HPUX, The Santa Cruz Operation's Unix, IBM's AIX for RS/6000 and DOS.

Available next month, NetWorker for HP 9000 will start at \$2,000.

► **Innovus**  
(905) 829-8717

AlmTech Corp. has announced a development agreement with IBM under which AlmTech's IconAuthor will support IBM's RS/6000 workstations.

According to the Nashua, N.H.-based company, the agreement enables non-programming multimedia users to produce interactive multimedia applications that combine graphics, text, animation, audio and video.

The authoring tool has an icon-based visual programming environment that lets IBM users create interactive productions for an assortment of applications, including performance support systems, computer-based training and interactive business presentations.

A single-user license of IconAuthor 5.0 costs \$10,000. A four-user license costs \$30,000, and a 10-user license costs \$60,000.

► **AlmTech**  
(603) 863-6220

Breakaway Software has introduced Picus, a system administration tool.

According to the San Francisco company, Picus handles day-to-day management of Unix servers and/or clients.

Picus has a layered client/server approach. Each layer is responsible for providing a place of acquiring, preparing and presenting data. Picus also employs a Daemon-based messaging system that lets users monitor activities throughout the network.

Picus consists of eight modules that are accessible from the menu bar. These modules include user management, security, watchdog capabilities, networking and managing large networks, pool configuration and integrity enforcement, configuration and customization, teletypewriter processes and archive capabilities, according to the company.

The stand-alone version of Picus costs \$1,995; the network version costs \$3,995.

► **Breakaway Software**  
(415) 969-3600

Network Specialists, Inc. has announced Balance, a Novell, Inc. NetWare Loadable Module designed to increase server performance and provide fault tolerance for NetWare V3.11 and 4.0 server environments.

Balance eliminates I/O bottlenecks by providing load balancing for incoming and outgoing IPX, AppleTalk, Apple's AppleTalk and TCP/IP traffic. The product also increases server use by accepting the amount of transferred data from Macintosh-based devices to a server, according to the Lyndhurst, N.J., company.

Balance costs \$1,695.

► **Network Specialists**  
(201) 864-5400

UniPress Software, Inc. has announced LAN Manager for Unix (LMU) for Sun Microsystems, Inc. workstations.

The Edison, N.J., company has ported LMU 2.2 to Sun, enabling Sun users to apply to act as servers for PC client applications on DOS, Windows, Windows for Workgroups, Windows NT and OS/2 platforms.

From any of these platforms, users can access large Sun disks and fast Unix printers on the LAN Manager network.

LMU for Sun is priced at \$2,195 for a 45-user server, \$4,995 for a 125-user server and \$7,995 for an unlimited-user license server.

► **UniPress Software**  
(908) 257-3700

Qualcomm, Inc. has introduced The Endo, a Qualcomm software, an electronic-mail program that provides full functionality to users of PCs and Macintosh systems across TCP/IP networks without specialized E-mail servers and gateways.

Features include message filtering and double-click attachment lines. According to the San Diego company, the Macintosh version supports Apple Computer, Inc.'s AppleEvent and offers a drag-and-drop attachment. The PC-compatible version provides Multiple Document Interface support.

Per-unit pricing for The Endo by Qualcomm software is \$50 for one to nine users. Volume discounts are available.

► **Qualcomm**

TECHNOLOGY

## Moving toward a wireless infrastructure

By Joanie M. Wexler

**close**  
Wireless  
networks

Terms such as CDPP and PCS have started competing with packet radio, paging and other wireless schemes from the likes of Ardis, RAM Mobile Data, Motorola, Embarc and SkyTel for near mind share. The emergence of these technologies is rendering network planners' near-Herculean task for companies trying to sort out the trade-offs of the various methods of communicating through the air.

## Alphabet soup

*The following is a glossary of wireless networking technologies and their general targeted applications:*

► **CDPP** (Cellular Digital Packet Data). An emerging technology that transmits data over cellular networks by inserting data packets into unused voice channels. Its main use is likely to be for short, bursty transactions, such as mobile credit-card authorizations. Status: No users other than those in trial mode today. Half of the McCaw Cellular Communications, Inc. network is slated for some CDPP trials by year's end. McCaw plans for the entire network to have some CDPP channels by second-quarter 1994. Service availability is slated for year-end 1994 from Ameritech Corp., GTE Mobile and Bell Atlantic Corp.

► **Cellular-switched cellular** Uses today's cellular network to transfer connection-oriented data via a cellular modem, much in the way users transmit data over today's analog-wired networks via digital-to-analog modems. Main use will be for sending long files and faxes.

Status: In use but faces inherent connection unreliability and, like all cellular services, is expensive.

► **Mobile satellite services**. Voice and messaging-oriented technology targeted at places without an existing wired infrastructure. The problem with using it for data is the propagation delays associated with satellite.

Status: In use but faces inherent connection unreliability and, like all cellular services, is expensive.

► **Packet radio** Connection-oriented service akin to wired public-packet switching but based on radio-frequency technology. It is intended for mobile terminal applications.

Status: In limited use by subscribers of Ardis and RAM Mobile Data networks. Users report varying degrees of reliability.

► **Paging** One-way data messaging and broadcast technology. The majority of applications relies on small message transmission. Main vendors are Motorola, Embarc and SkyTel. The Federal Communications Commission has, however, opened spectrum for future two-way paging services, due to arrive at the end of 1994.

Status: Mature.

► **PCS** (personal communications services). Individualized voice and data messaging service, based on the concept of large numbers of ubiquitous microcells that require minimal battery power and thus allow for smaller portable devices.

Status: Embryonic. FCC only last month announced its plan for allocating thin slices of spectrum in the 2-GHz range to potential service providers. The auction is to take place next May.

► **SMR** (specialized mobile radio). Voice-only technology in which equipment is available in a vehicle.

Status: Mature.

► **ESMR** (enhanced mobile radio). Adds data to SMR and allows its use with portable systems.

Status: First network expected in 1994.

Sources: Computerworld, The Brokers Group, CIDI Corp.

There is good news, though: Most analysts agree that the multiple wireless transport methods, each with its own "home" in the radio-frequency spectrum (see graphic), will eventually merge into one large wireless infrastructure.

That infrastructure — like today's crossroads of circuit-switched, packet switching and other wired network schemes — will depend on end-user devices that sport multiple interface protocols for accessing different networks.

These devices will also eventually have the intelligence to know which network service to automatically access given the application.

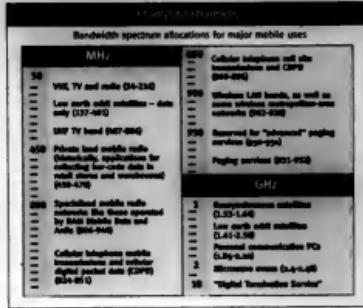

"Devices will start coming in 1994 that will work with different radios and switch from one service to another," said Roberta Wiggins, research director of wireless mobile communications at The Yankee Group in Boston.

Progress is already under way:

AT&T's Hobbit chip set will begin combining wireless, wired and fax capabilities in 1994. Motorola, Inc. is also said to be working on chips that will support both RAM Mobile Data's and Ardis' proprietary packet radio protocols, as well as the emerging Cellular Digital Packet Data (CDPD) protocol, though Motorola declined to comment on such activities.

Similarly, IBM's General Manager of Networking Systems, Ellen Hancock, said at the Interop '93 trade show in August that IBM would soon offer protocol-specific PCMCIA adapters for the various network services. The idea would be for users to swap those in and out of their laptops as the application dictated.

Douglas Fields, vice president of telecommunications at United Parcel Service, Inc. — today the world's biggest user of packet-over-cellular technology — said he thinks the inherent limitations of spectrum for wireless networks will be "a big-time stimulus for transmission efficiency through new coding and compression

EVERYTHING YOU NEED  
TO GET YOUR BUSINESS,  
OR WORK GROUP, UP AND  
RUNNING ON cc:MAIL  
IN ONE BOX.

If you thought e-mail was out of your reach, think again. Introducing the Lotus® cc:Mail Group Pack™ for Windows™. A complete e-mail system, including licenses for 10 users, that's not only easy to buy, but easy to install and use.

## RULE-BASED ARCHITECTURE GIVES YOU COMPLETE CONTROL.

The cc:Mail Group Pack includes both DOS and Windows versions of the world's most popular e-mail system. With Windows cc:Mail's

A full range of SmartTools™, including a spell-checker and a powerful search feature - makes cc:Mail incredibly easy to use.

advanced rule editor will filter your mail according to priorities you designate. Furthermore, it will reroute or file incoming mail, and handle outgoing messages per specific criteria set by you. And with a user friendly interface including spell-checker, and flexible search options, anyone can feel comfortable commanding this powerful e-mail system.

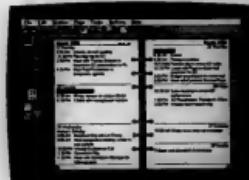

## IT DOES FAR MORE THAN DELIVER YOUR MAIL.

cc:Mail Group Pack also includes the new Lotus Organizer™ 1.1 for Windows. This top-rated Personal Information Manager has been designed to automatically perform group scheduling for you. A task which used to take hours now takes minutes. Just enter a suggested time for a group meeting and Lotus Organizer will consult your co-workers' schedules and tell you if they're available. And it does this without revealing personal schedules.

And cc:Mail™ is designed to grow effortlessly as you do. Easily accommodating as many users as you have, across as many platforms as you use... DOS, Mac™, Windows, OS/2™ and UNIX™.

## IT ALL ADDS UP.

Now you can get started with the most advanced e-mail available. The system rated easiest to learn and use by the National

Lotus Organizer 1.1—the same product that makes it easy to organize your day now makes it easy to schedule group meetings.

Software Testing Laboratory With the Group Pack you get the full-featured unabridged version of the Fortune 500 standard in e-mail. It also includes licenses for 10 users and the new Organizer 1.1 for Windows. All in one box. And all at a very affordable price.

Lotus now puts the power of the e-mail system well within everyone's reach. The cc:Mail Group Pack. Pick it up at your Lotus Reseller. Or call 1-800-448-2590 for more information.

E-MAIL FOR WINDOWS

# Banyan adds distribution tools

By Elizabeth Horwitt  
WESTBOURG, MASS.

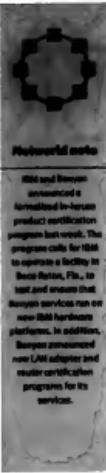

Banyan Systems, Inc. last week announced its Enterprise Data Distribution (EDD) strategy that will allow users to distribute and collect all types of data across heterogeneous network operating systems and client/server environments.

Novell, Inc. and Microsoft Corp. are in the process of rolling out products that enable users to automatically distribute software and updates across enterprise client/server systems. Indeed, Novell rolled out its Network Navigator NetWare Loadable Module for software distribution at last week's Networld '93. And Microsoft has announced plans to provide similar capabilities for its Windows NT Advanced Server through the upcoming Hermes network management system.

## Task automation

However, Banyan is taking a much broader task with EDD, according to Dene Wolff, senior product manager. Scheduled to roll out in mid-1994, the product aims to lower enterprise client/server administration costs by automating the following tasks:

- Distribution of data or software across multiple servers and clients. For example, a server could be programmed to automatically distribute a software update across the enterprise overnight. The product will support "chained distribution," in which the file or software up-

Networld motto

Novell and Banyan announced a previewed in-house product certification program last week. The program calls for IBM to operate a facility in Boca Raton, Fla., to test and ensure that Banyan services run on new IBM hardware platforms. In addition, Banyan announced new LAN adapter and router certification for its services.

date is sent to one server at a site that updates its own clients and then sends the file on to the other servers at that location, Wolff said. This can save customers significantly on bandwidth compared with the traditional method of sending the same update to each server at a given location over long-distance dial-up lines.

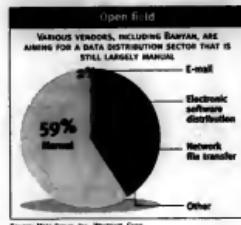

- Collection of data from multiple disks at remote sites and consolidation on a central server. This is particularly useful to retail chains and service companies that need to regularly collect data about their outlets' daily business operations.

"When EDD becomes available to distribute software to the desktop, it will solve our major problem of ensuring that all desktops are more or less equal" in terms of what they are running, said Marek Dziedzic, an information systems analyst at Stentor Canadian Network Management in Ottawa. "That would be a great help because we would no longer depend on local administrators" to implement new releases and updates, he added.

EDD will be fully integrated with other Banyan enterprise network services, such as StreetTalk III global directory, Intelligent Messaging, Security and Banyan's upcoming graphical user-interface-based network management service, Wolff said.

Integration with Intelligent Messaging will be an added benefit for EDD because it will enable the service to "move data only when the network was not busy," Dziedzic said.

In addition, Banyan will use EDD as a "build-

Source: Veris Group, Inc., Westport, Conn.

ing block" for future applications. Possibilities include electronic distribution of Banyan software via the service and EDD services for remote laptops and telecommuting users, Wolff said. For example, when the user plugs in the laptop after a trip, "the service automatically figures out where the data [comes in from the laptop] goes," he said.

Early last month EDD rolled out across its three major network service platforms, Wolff said. Support for Enterprise Network Services and native Vines will be in the initial release, with Vines for Unix likely to appear in a subsequent release. Pricing was not available.

The initial release will support server-to-server distribution and collection of data. Users can initiate EDD services from the various client systems supported by Banyan services; however, distribution of data to and collection of data from client disks will wait for a later release.

## Wireless

CONTINUED FROM PAGE 51

coming pervasive — though largely for voice — because its underlying technology allows ubiquitous access along with small, unobtrusive equipment (see "Aiphilic Soap," page 51).

PCS also suffers from "market inertia," said Daniel Briere, president of TelChoice, Inc., a consulting firm in Vernon, N.J. He said PCS will not be widely available for two to three years.

"Even by the time of the FCC auction" for PCS spectrum in May 1994, "millions of people will have cellular phones and thousands of people will have cellular modems," Briere said. PCS would mean displacing all that gear, he pointed out.

On CDPD, for which Version 1.0 of the protocol specification was released in July, Thomas Nolle, president of CIM Corp., a consultancy in Voorhees, N.J., said, "I don't believe its bandwidth would be sufficient for laptop applications, and the delay associated with it is also likely to be too high."

Nolle said he was skeptical about the potential of the other technologies as well.

Senior editor Eddie Booker contributed to this article.

## Up in the air

Early users of wireless technology report the following pros and cons:

• **CDPD.** While there are no official CDPD users today, UPS uses CDPD-like packet-over-cellular networks to the tune of \$40,000 to \$50,000 calls per day.

A custom solution involving 56 cellular carriers and its own private terrestrial packet network, UPS' TotalTrack allows 50,000 UPS personnel in the field to communicate package and signature information back to the company's data center in Mahwah, N.J. Two-way messaging applications, allowing trucks to send and receive other series of messages — such as the directions to a customer location — are also in the works.

According to Douglas Fields, vice president of telecommunications, UPS is watching the commercial plans for CDPD carefully and could switch to this network with little more than some software modifications.

Fields is unabashedly bullish about the future of wireless data. "Within five years, we'll see the same applications that are on the terrestrial wired network deployed on a broad scale on wireless networks," he said.

The variety of wireless solutions —

CDPD, packet radio, paging and satellite — will remain, Fields said. He said he believes different types of networks (some optimized for reliability; others for low cost) will mean "many of the players in the race today will be at the finish line,"

• **Packet radio.** ADP Automotive Claims Services in San Ramon, Calif., has been struggling to find a wireless link as the long on the case for its pen-based mobile application for claims adjusters. An innovative laptop application that allows adjusters to drill down to the anatomy of a car accident to get repair costs, correspond in real time with host databases and cut checks on the spot requires a packet-based wireless service to make the application as convenient as possible, said Gerrard Blundistrup, senior vice president.

However, the company's trials with the ARDIS network have hit snags with unpredictable delays and inefficient geographical coverage that discourage adjusters from using wireless technology. ADP is now testing the RAM Mobile Data network but has officially put the wireless component on hold until the technology is more mature, Blundistrup said.

The General Services Administration, Region 5 in Philadelphia had a more positive experience during a beta test of a wireless packet network this summer. In the test, RAM Mobile Data's network was integrated with the federal agency's

### CC-Mail electronic-mail application.

"It is still being used with our remote users," said Bill Horst, chief of communications at the operations branch.

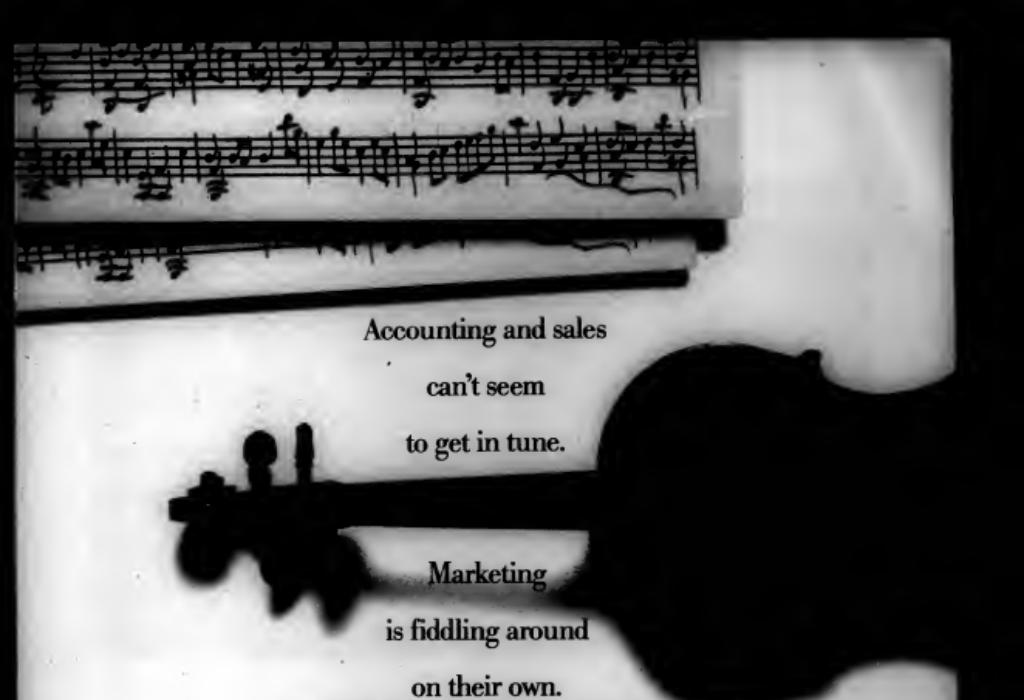

Horst valued the transparency of the application: "If you're at your desk in the building sending E-mail to someone else, you've no idea where they are ... That's the way it should be." Messages were routed back and forth between wireless users and those on the home-office LAN. No extra addressing was needed to send E-mail to remote users.

• **Paging.** Some organizations are finding one-way paging to be a more timely and economical alternative to faxing. For example, Ethos Corp., a software maker in Boulder, Colo., recently began bundling the Embarex paging protocol into its commercial mortgage processing software so that financial firms can electronically deliver mortgage rates to nearly 2,000 brokers every day. Brent Jones, director of technical operations at Ethos, estimated these firms spend nearly \$30,000 per month for faxing via a service bureau.

"Our initial estimate is that these companies would spend \$10,000 or under by disseminating information via Embarex instead," he said.

More importantly, he said, files broadcast across the Embarex network can be downloaded as data that can be manipulated — a capability that could save brokers an hour and a half each day.

Sound familiar?

IBM Client/Server

IBM is a registered trademark of International Business Machines. ©1993 IBM Corp.

# How do you get everyone working in concert?

To stay competitive, you're constantly searching for better ways to orchestrate the flow of information. How do you get more out of your PCs? How can you make the most of your existing systems? What can be done to streamline your organization? More often than not, the answer is IBM Client/Server.

IBM can develop open client/server solutions that put the combined strength of all

your computer systems to work for you. We have thousands of specialists worldwide who can work with you to custom-tailor a solution that's right for your particular business. And we'll work with you at any stage of the process, from initial consulting to helping you tie everything together—we'll even manage your systems for you.

Whether you're upsizing or downsizing, nobody knows how to ensure systems reliability and security for your "mission critical" applications better than IBM.

We can also help you integrate different types of hardware, software and networks. We have the industry's widest array of software and network products, and we support Distributed Computing Environment (DCE), enabling different computer brands and platforms to work together in harmony.

For more and more companies, IBM Client/Server is the key to getting everyone working in concert. We've done it for hundreds of companies. We can do it for you. For more information, call 1 800 IBM-0045, ext. 10.

## Information highway paved to the Midwest

By Ellis Ronker

Now that the Clinton administration is paving the way for its information highway, the burden falls on state governments to figure out how to build crucial statewide networks.

That issue was one highlight of the first Midwest Summit on Information and Technology in Indianapolis, featuring a roundtable with the governors of Indiana and Ohio and senior telecommunications officials, users, a regulator and a consumer advocate.

### Role unaffected

The roundtable also underscored the fact that state government's role in promoting the Clinton administration's information highway initiative has yet to be fully articulated.

Among other questions, the group wrestled with whether private or public funds should be used to create statewide networks and how to ensure universal access for all constituents in the state.

The group also addressed the question of how geographic regions such as the Midwest can differentiate themselves via their computer and network infrastructure, even as business activity is increasingly distributed, thanks to those same technologies.

"Money and ideas move quickly ... but infrastructure is regional, as is the work force," said Indiana Governor Evan Bayh. Bayh suggested that decisions about where to locate a business will increasingly be dictated by the caliber of the local work force and that educational and training technologies available in a region are vital.

Picking up on this theme, Chicago-based Ameritech Corp. announced at the summit its commitment of \$2.5 million in two years to support a regional initiative to link schools to on-line resources.

The "Learning Village" project will connect a total of 50 schools in Illinois, Indiana, Michigan and Ohio to databases, electronic newsletters and the Internet. Teachers and administrators in the four states will also be able to access more than 500 projects and lesson plans that are organized by grade level and subject.

Asked how state government should promote information technology, both Bayh and Ohio Governor George V. Voinovich argued that government should not pick "winners and losers." They suggested instead that the government act as a catalyst for private industry's research and development efforts in the region by encouraging partnerships and projects.

#### Focus is an outcome

For instance, rather than dictate the specific kinds of technologies that should be installed in Indiana's high schools, "we can set world-class standards, focus on outcomes," Bayh said. The choice of which technologies to use to accomplish

these goals would be left up to committees, schools and perhaps individual teachers, he said.

Government can also act as a clearinghouse for available technologies, Voinovich said. But others on the panel said the pace of technology and the marketplace

would make this role unworkable.

The two-day Midwest Summit included approximately 20 technology demonstrations from computer hardware vendors, carriers, universities and integrators specializing in educational and health care applications.

**"Money and ideas move quickly ... but infrastructure is regional, as is the work force."**

## Enterprise Networking

**InterConnections, Inc.** has announced Version 3.0 of its Terminal Emulation Services (TES).

According to the Bellevue, Wash., company, TES allows PC users on a Novell, Inc. NetWare LAN to log on to Digital Equipment Corp.'s VAX minicomputers and run VMS applications.

The product consists of two compo-

nents: the host software, a driver on the VAX that coordinates TES communications between the LAN and VMS; and the client software, a terminal and stay resident program on the LAN workstation that provides a virtual connection to the VAX.

Key to this release is its ability to provide multiple live Windows sessions.

TES license agreements begin at \$1,000 for five users. An unlimited license starts at \$2,000.

### ► *InterConnections* (206) 831-5773

**Relay Technology, Inc.** has introduced RelayPC Gold for Windows 3.0, communications software.

According to the Vienna, Va., company, this release adds support for the TCP/IP open networking protocol and expanded Windows support, with updated ease-of-use and data transfer features.

The product provides comprehensive

connectivity to stand-alone or LAN-based PCs, bulletin boards, on-line information services, midrange systems and mainframes.

RelayPC Gold for Windows features file and data transfer, 3270-emulation for accessing MVS, VM and VSE applications; and forms of terminal emulation for PCs interfacing to other hosts.

Support is intended for TCP/IP connections through Microsoft Corp., Novell, Inc., Unisys Corp., Baus, Inc. and file-transfer protocol stacks.

A single-copy costs \$399.

### ► *Relay Technology* (703) 508-0500

**Digital Communications Associates, Inc.** has announced the implementation of the second phase of its Universal Communications Architecture and introduced QuickApp for Windows 1.1.

According to the Alpharetta, Ga., company, QuickApp for Windows 1.1 is a point-and-click communications middleware development tool that insulates corporate developers from the complexities of standard communication application programming interfaces.

The product creates a "navigational map" of the host application that is stored on a PC file. The file enables users to identify input fields and data and to navigate to host application screens and host data fields.

Key features include support for Microsoft Corp.'s Visual C++ and PowerSoft Corp.'s PowerBuilder.

QuickApp for Windows 1.1 costs \$995.

### ► *Digital Communications Associates* (404) 442-4000

**Crystal Point, Inc.** has introduced Outside View 3.0 for Windows, its PC-to-host connectivity product.

Outside View for Windows now features support for both asynchronous and IBM mainframe connectivity.

According to the Bothell, Wash., company, Outside View 3.0 for Windows also includes ComBasic, the first Basic macro language to be embedded in a PC connectivity program.

Additionally, the product has a TN2270 feature that gives Windows users access to IBM 3270 mainframe applications and data across TCP/IP networks.

Remote communication features, such as an automatic dialer, log-on macros and a phone directory, are also provided.

The product costs \$349.

### ► *Crystal Point* (206) 657-3656

# Hardware compression with or without the extra gear

An enterprise-wide solution available now — DATA PACKER®

You've got to have extra gear to get hardware compression — processor and software upgrades and ESCON cabling. And even then you may not be able to deliver the benefit across your enterprise. But now, you can pick up the benefits of hardware compression with or without all the gear — with DATA PACKER® from BMC Software, Inc.

## Up to 80%

DATA PACKER can achieve compression up to 80% by exploiting the hardware compression facility of IBM's newest ES/9000 processors. Or, when

hardware is not available, it provides software emulation.

Plus, by offering four additional compression algorithms, DATA PACKER can give you compression up to 90%, depending on your data.

## Across your enterprise

DATA PACKER's method of hardware compression also can be used across multiple CPUs, giving you an enterprise-

wide compression solution — with or without the extra hardware.

Excellent compression. Across your enterprise. For all major platforms — MVS, DB2®, IMS and VSAM. And with DATA PACKER you never need to worry that your mission-critical data is put at risk. All available today.

To find out more, call BMC Software at 713 240-8800 or **1 800 841-2031**.

## IBM unfurls ImagePlus client/server plans

HP/UX, Solaris and Windows among non-IBM platforms targeted

By Thomas Hoffman  
NEW YORK

IBM used the recent Imaging Expo '93 trade show as a launching pad to announce the long-awaited client/server strategy for its flagship ImagePlus/2 and ImagePlus Image and Records Management (IRM) document storage and retrieval software.

In addition to scheduled ports of ImagePlus/2 to its MVS, OS/400, AIX and OS/2 operating environments in the next six to 12 months, IBM plans to deliver client versions of the imaging software to competitive platforms such as Windows 3.1. Server ports to Unix environments supported by Hewlett-Packard Co. and Sun Microsystems Computer Corp. could arrive by late 1994.

Although IBM customers complained that the vendor's client/server direction for ImagePlus/2 took too long to surface, several prospec-

tive ImagePlus users said the 1994 delivery dates dovetail with their plans to implement imaging systems.

"IBM should have laid out its plans for AIX and other environments further back," said Dick Kane, a department head for technical infrastructure and support at ITT Hartford Life Cos. However, Kane said he expects to evaluate IBM's ImagePlus/2 offerings for its version of the Unix System V Release 4 operating system.

ImagePlus/2, already available on IBM's OS/2 2.0 server platform, is scheduled to be ported to a server version of the MVS mainframe environment sometime in the first half of 1994. Server ports to its OS/400 and AIX environments will follow later next year, according to Ronald L. Hankinson, director of IBM's ImagePlus systems development.

IBM also plans to deliver a client version of ImagePlus/2 for its OS/2 2.0 operating system

CONSUMERS AND PRIVACY, 64

RITESIZING SURVEY, 65

NEW PRODUCTS, 68

by early next year, to be followed shortly by a Windows port because of strong customer demand for a desktop version.

"The market tells us that a Windows 3.1 version of ImagePlus/2 is an absolute requirement," Hankinson said.

### Expecting positive reaction

Analysts anticipate positive user reaction to the ImagePlus/2 ports.

"The real sweet spot we hear from clients is IBM's plans for Windows client and Unix server ports," noted Mike Howard, a vice president and service director in the office information systems group at Gartner Group, Inc. in Stamford, Conn.

IBM's plans to port ImagePlus/2 and IRM to its AIX environment should make it easier for the vendor to complete follow-on ports to HP's HP/UX and Sun's Solaris Unix platforms, said Scott McCreedy, principal at IDC/Avantec Technology, a Framingham, Mass., market research firm that specializes in imaging and work-flow ImagePlus/2, page 65

Johanna Ambrosio

## Blue blues

By ignoring the small-to-medium-size mainframe customers, IBM is blowing a huge opportunity. These accounts often don't even know who their IBM salespeople are at this point. As a result, they wind up dealing with other vendors for peripherals, workstations and assorted gear.

More important, when these customers are ready to swap out their 3490s and 3690s for a new computer setup (read: client/server), they have almost no reason to go with IBM. Any loyalty that may have built up over the years has been completely shattered.

Consider the following examples of former IBM customers who have, for various reasons, chosen other suppliers. Although some of the people asked to remain unnamed, they are all real.

"At one time, we had everything

IBM," says Frank Monteleone, information technology director at NutraSweet Co. in Deerfield, Ill. "Now, you look around, and we don't have anything with their name on it. Microsoft has more of an impact on my day-to-day life than IBM."

A pharmaceutical company in New Jersey brought XL Datacom gear into its all-IBM shop because at first the IS director couldn't even get the local IBM branch to bid on the \$15 million contract. "It took me three or four tries, but I finally got them to respond," he recalls. "They sent a proposal when all the other vendors sent their top regional people. And their proposal was 20% to 30% higher than the others."

While he would have paid a small premium to avoid the complexity of having to manage multiple suppliers, this man says, "I just couldn't justify that price to my management."

"I couldn't even tell you the name of my IBM sales rep, but at one time we were the largest IBM customer in Akron," said William Egger, president and CEO of FBOC Services Division, the IS branch of First Bancorp of Ohio. He bought his most recent storage devices from Storage Technology Corp. "We'd be happy to talk to IBM about their storage gear, but no one's been in to see me for about three years."

Ambrosio, page 66

## DEC extends OSF/1 functions

By Craig Stedman and Jean S. Bozman  
MAYNARD, MASS.

A key component of Digital Equipment Corp.'s wide-ranging product introduction tomorrow will be Version 2.0 of the DEC OSF/1 operating system, which Digital said will include full support for running Unix System V Release 4 applications and system management utilities.

Due to ship in January, DEC OSF/1 2.0 also provides C2-level security and an integrated Open Software Foundation (OSF) Motif Version 1.2 user interface, according to Digital officials.

It will also be the base release on which upcoming symmetric multiprocessing (SMP) and clustering capabilities will be layered.

Limited shipments of an SMP version of DEC OSF/1 are scheduled to start in February, with general availability expected next July. Digital said clustering functionality that goes beyond the workstation farms now supported by DEC OSF/1 will also be added beginning in 1994 (see chart).

**Big cog in the wheel.**  
Digital's holding steady as one of the OSF/1 kernel's few adherents at this point, the company acknowledges that the Unix System V Release 4 support being added in DEC OSF/1 2.0 is an important cog in its renewed attempt to shore up its standing as a commercial Unix also-ran (CW, Oct. 4).

"For users or programmers that are used to System V, and system managers as well, this will solve that," while enabling them to take advantage of DEC OSF/1's 64-bit structure, said Andrew Pelt, marketing manager for Digital's

workstations and servers group.

Digital already provides System V Release 3.2 compliance in the current DEC OSF/1 1.3 release, which began shipping in July. The Unix System V Release 4 features will extend that to full conformance at the application, management utility and user interface look-and-feel levels, Pelt and other executives indicated.

The Unix System V Release 4 environment is supported through a so-called "habitat mechanism" that allows alternate sets of application programming interfaces to reside on top of the OSF/1 kernel. Most Unix System V Release 4 ap-

plications should run under DEC OSF/1 2.0 after being recompiled without any code changes required, Digital said.

Judith Harwitz, president of Harwitz Consulting Group, Inc. in Watertown, Mass., said the Unix System V Release 4 compliance should make concerns about DEC OSF/1's compatibility with Unix releases from other vendors "a nonissue." And some users said they see the

DEC OSF/1, page 64

# Records privacy concerns grab citizens' attention

By Mitch Betts

WASHINGTON

The latest national opinion poll on the privacy of consumer records is a wake-up call for American businesses: Consumers said they are much more likely to patronize businesses with policies that safeguard the privacy of sensitive information.

The survey conducted by Louis Harris and Associates, Inc. found that, for the first time, the majority of adults in the U.S. (55%) are "very concerned" about the confidentiality of their records.

The poll results indicate that "privacy is now a front-burner issue" for American consumers and will influence their purchasing habits, said Humphrey Taylor, chief executive officer of Louis Harris and Associates in New York.

#### Money and health matters

A follow-up poll showed that Americans expect their financial and medical records to get the most protection. Consumers ranked banks, health insurers, hospitals and credit-card companies as businesses needing strict privacy codes.

The message is that companies can gain a competitive edge by developing and advertising privacy-sensitive policies, according to Alan P. Weston, a priva-

cy expert at Columbia University in New York. Weston directed the study and published the results recently in a newsletter, "Privacy and American Businesses," in Hockessin, N.J.

Some companies, such as Pacific Bell in San Francisco, have already received the message and developed information privacy guidelines. Likewise, Bob Charlamone, vice president for information systems at Eon Corp., a Reston, Va., company that develops home shopping and

other interactive television services, said his firm will keep consumer information confidential and just pass along the orders to retailers.

Privacy advocates have long argued that companies should adopt a "code of fair information practices" that promises to allow consumers to see and correct their records and prohibits the release or sale of consumer data to third parties unless the consumer agrees.

The challenge is to reconcile that advice with another hot business trend: the collection of consumer and lifestyle data for the purpose of narrowly targeting consumers in marketing campaigns.

#### Good timing

The poll also comes at a time when the Clinton administration is grappling with the privacy issue in a variety of contexts, including the electronic medical records envisioned for health care reform [CW, Aug. 9]. Moreover, buried in the White House's "reinventing government" report is a line recommending creation of a federal Privacy Protection Board to issue privacy guidelines.

Meanwhile, the Internal Revenue Service has responded to reports of espionage snooping in tax records by creating the post of privacy advocate [CW, Aug. 9]. Whoever fills the executive-level job, which is expected to pay \$62,900 to \$107,300, will investigate privacy problems and incorporate privacy principles into the agency's massive computer modernization project.

## DEC OSF/1 2.0

CONTINUED FROM PAGE 63

capability as a positive move for Digital, at least image-wise.

"I would be hard-pressed to tell you about a business situation that I need for right now, but at the philosophical level of thinking, it's good news," said Frank Brink, director of international operations for technology business development at Newport News Shipbuilding and Drydock Co. in Newport News, Va.

"That's a step in the right direction," agreed George Reid, MIS director at Sanford C. Bernstein & Co. in New York. However, he added that when it comes to the Unix market, "the issue on the DEC side is whether the train has already left the station."

Bernstein, which has about 300 workstations running under Digital's earlier Ultron derivative of Unix, plans to standardize on Microsoft Corp.'s Windows NT operating system on the desktop, Reid said.

The company "looked very eagerly" at DEC OSF/1 in the past, but now the past, but now the present is getting the necessary functionality in place, NT provides a better alternative, he added.

Digital's Unix push also comes too late for Mohamed Elzay, director of research information services at the Danforth Cancer Institute in Boston. The institute, an Ultron user that also has Sun Microsystems, Inc. hardware, will "almost certainly" become an all-Sun shop over time, he said.

Elzay said he is satisfied with Digital's products and customer service, but its previous arm's-length embrace of Unix has left him wary of doing business with the company. "The gyrations of the past few years have turned us off very substantially," he said.

SMP and clustering are also key technologies for making DEC OSF/1 useful in commercial environments, according to both Digital and analysts. Support for six-way multiprocessing should be in place by mid-1994, while cluster functionality will be added in the next three years, the company said.

Mark Silverberg, Digital's commercial Unix marketing manager, said he hopes in 1994 "to get to the point where we're recognized as competitive in Unix clustering." But DEC OSF/1 will not fully match the company's OpenVMS clustering capabilities until 1996, he added.

## Ambrosio

CONTINUED FROM PAGE 63

The list could go on. A California life insurance company put out a \$60 million bid that IBM did not respond to, although the IS director hoped it would. A California manufacturing concern is installing Hewlett-Packard computers as its client/server direction because it did not know what IBM's most recent story was.

"Look," one IS director says. "If IBM came right out and said they don't want my business because I'm too small for them, I could understand that as a business decision, and I would live with it. But they keep putting out messages about their intentions for this market."

True, these customers are Citicorp or American Airlines, but they're not exactly mom-and-pop corner delis, either. These IS executives have realistic business models, and they don't want IBM representatives to live at their sites. Still, a sales call once a quarter should not be too much to ask.

Ambrosio is a Computerworld senior editor, systems and software. Her MCJ Mail address is 596-5602.

# Survey shows rightsizing right on

By Gary H. Antes

Three-quarters of Fortune 1,000 information systems managers surveyed recently said they are "rightsizing" their IS infrastructure or planning to do so, and of that 75%, the majority said cost reduction was the driving factor.

However, of those respondents who said they had no plan to rightsize, the majority cited lack of cost justification as the main reason.

That apparent contradiction came to light in a survey of 105 companies in a cross-section of U.S. industry by Market Vision.

## Downside

What are some of the negative consequences of rightsizing?
Reducing staff 54%
Adjusting to change 53%
Network complexity 21%
Financial issues 21%
Decentralized control 21%
Response from info managers (Multiple responses allowed)

Source: Market Vision, Inc., Charlotte, N.C.

Inc. in Dunedin, Fla.

Market Vision defined "rightsizing" as any combination of "downsizing, smart-sizing and other industry buzzwords." In essence, it referred to the selection of new computing standards and architectures in response to new technology, budget pressures, changing business or other forces.

Asked how they expected to save money through rightsizing, they most often cited a reduction in development and maintenance backlog (see chart above).

Asked about the downside, respondents most often cited the need to retain staff (see chart at left).

Half the rightsizers said they would re-engineer the business processes underlying their applications as part of the move to new platforms. Twenty-eight percent said they would rewrite the applications, and 21% said they would

port the old code as is.

The lack of unanimity on how rightsizing would affect costs was explained in part by how IT managers felt it would affect various parts of their shops. For example, 59% said rightsizing would reduce the maintenance backlog, but 9% said it would increase the backlog. Market Vision sent a strong message to its clients, who include many major software vendors. Almost three-quarters of survey respondents said vendors do not yet offer enough tools to help implement a rightsizing strategy.

## Imaging Expo '93

# Work-flow aids lead way

By Ellis Booker

Optika Imaging Systems, Inc. in Colorado Springs recently led the charge among document imaging vendors that built up work-flow offerings at the Imaging Expo.

Optika announced enhancements to its PowerFlow work-flow management software. Chief among the improvements are a business modeling component that allows programmers or end-users to graphically design and automate work-flow steps.

Many software categories, from electronic mail to stand-alone utilities, are adding work-flow features. But "imaging companies are much farther ahead since they've had a work-flow market, with users who can tell what they're looking for," said Bruce Silver, vice president at market research firm BIS Strategic Decisions in Norwell, Mass.

Simple work-flow products merely route and track documents between work queues. More sophisticated systems, he said, are beginning to act as integration hubs, passing data among different applications in the background and then presenting users with the results in a standard format.

Optika's software comprises PowerFlow Builder, a graphical design tool; PowerFlow Manager, a graphical user in-

terface-based administrative tool; and PowerFlow Workplace, a graphical desktop running under Windows.

The software will begin shipping in the fourth quarter, with a suggested list price of \$9,995 for a five-user system. Multiuser configurations of 50, 100, 250 and up will also be available and priced accordingly, Optika said.

Other document imaging vendors introduced new producing products:

■ Intralot, Inc., a systems integrator in Belmont, Mass., Xerox Information Technologies Corp. in Melrose, Mass., and Calico Recognition Systems Inc. in Sunnyvale, Calif., introduced a high-volume, turnkey production imaging system called less-cards, capable of producing 10,000 pages per day. Prices will start at \$129,900.

■ Image Business Systems Corp. in New York announced support for OS/2 and NX Window Systems terminal desktops.

■ Sigma Imaging Systems, Inc. in New York announced the integration of its OmniDeck imaging software with Notes.

■ Laser Data, Inc. in Tyngsboro, Mass., showed the DocuData and DocuFlow work-flow software, built on top of an Action/WorkFlow System from Action Technologies, Inc. in Alameda, Calif. Laser Data will also resell the Action Technologies product directly.

■ IBM demonstrated its homegrown work-flow system, FlowMark, showing the integration between the work-flow product and IBM imaging products.

■ IBM and Excalibur announced a cooperative software agreement under which IBM will distribute Excalibur's client/server Ptx/Tex/EPs document imaging software for IBM's RS/6000 platform.

What important changes have you seen or expect to see as a result of your rightsizing strategy?

# ImagePlus plan unfurled

CONTINUED FROM PAGE 62

systems. McCready said IBM should be able to tap into vertical markets where OS/2 and Solaris systems have gained strong footholds such as on manufacturing shop floors (OS/2/UX) and at pharmaceutical and brokerage firms (Solaris).

And while McCready agreed that IBM should address OS/2 client ports first, a Windows-based port is a logical follow-on, he said.

"You can argue all you want about the technical superiority of OS/2 vs. Windows, but the market is saying Windows," McCready said.

Still, the initial ImagePlus'2 ports are intended for IBM environments, and users at several large IBM shops have expressed interest in them. For example, CSX Technology Inc. in Jacksonville, Fla., plans to evaluate an MVS server and OS/2 client ImagePlus'2 combination that would help it store and retrieve personnel records and invoices used for shipping once the software becomes available next year, said Douglas E. Underhill, assistant vice president of technical planning at the technology arm of the rail transportation firm.

But before Underhill assesses the package, he wants further details from IBM about how the vendor plans to tackle compression issues for the direct-access storage devices needed to handle the high-bandwidth images that CSX Technology would likely create with the software.

"We like other firms, are looking at encapping paper, but we've recognized that when you stop using paper, you have to be able to store and recreate documents easily," Underhill said.

## Now the World's Leading Mainframe C Compiler Can Help You Make Some Powerful Connections

*Introducing the SAS/C Connectivity Support Library—it's just what you would expect from the first name in C programming tools for the IBM mainframe environment.*

### Make the Right Connections

To meet the challenges of client/server applications development, you need powerful connections. That's why we developed the SAS/C Connectivity Support Library (CSL). This comprehensive set of library routines and application programs developed with the SAS/C compiler on your MVS or VM/BALM CMS mainframe systems to communicate with applications using TCP/IP protocols on PCs, workstations, large servers, and even supercomputers.

### Choose Just the Right Tools

With the SAS/C Connectivity Support Library, you can put today's most advanced protocols to work in your own applications:

- X Window System version 11, release 5 (X11R5)

- Sun Remote Procedure Call (RPC), release 4.0

- Sun Network File System (NFS)

The SAS/C Connectivity Support Library is the first to offer NLM clients and X11R5 implementations for the IBM mainframe environment. Plus, SAS/C CSL works with a variety of TCP/IP protocols offering you complete vendor independence.

### Find Out More In A Free Report

## Meet the first PowerPC-based RISC System/6000.

It's more than an introduction. It's a revolution. The price/performance leader of UNIX® systems—IBM's RISC System/6000®—has joined forces with the most exciting chip ever created—the new PowerPC 601®—to create the POWERstation™ 250. The 250 sets a new standard for performance. Suddenly, engineering and scientific programs, application development and more

There are thousands of the commercial-strength And with Wabi,™ you'll soon speed as well. Plus Macintosh. There's more. We're also launching the most powerful RISC

POWERserver™ 990— edented processor delivering the first vanced client/server

And we've brought ogies like multimedia and object toolkits to the RISC domain. The future will see our PowerPC and POWER2 technology in everything from notebooks to supercomputers. Ready for a real change of pace? Call 1 800 IBM-6676, ext. 669.

### Briefs

#### Clinton honors innovators

President Clinton awarded Kenneth H. Olsen, founder and former president of Digital Equipment Corp., a National Medal of Technology "for his contributions to the development and use of computer technology and for his entrepreneurial contributions to American business." A medal also went to Amos E.

Joel, a retired engineer from AT&T Bell Laboratories who was a pioneer in telecommunications switching technology.

#### Xerox may outsource IS

Xerox Corp. recently confirmed the long-standing rumor that it is considering outsourcing some or all of its information technology. The \$15 billion company said it recently sent requests for proposals to four vendors but declined to identify them. A spokesman said Xerox will take

"several months" to make a decision and that the company may decide to keep operations in-house or outsource, which cost \$1.02 billion in the year ending Dec. 31, 1992, said outsourcing could help it save money, leverage technology and free management for core tasks. The company has about 2,500 information systems employees worldwide. The spokesman said it is too early to determine how an outsourcing deal would affect the firm.

#### Digital unit goes Far East

Digital's storage business unit plans to establish a manufacturing plant in Indonesia that will make thin-film heads for disk drives. The 100,000-sq-ft facility is

scheduled to begin volume production in mid-1994, Digital said. The company, which will use the heads in its own disk drives and also market them to other drive vendors, wants to expand storage manufacturing into the Far East to take advantage of lower cost structures and wages there.

#### Credit-card unit sold

First Financial Management Corp., an Atlanta information services firm, has signed a pact to acquire Brown-Forman Enterprises, a merchant credit-card processing unit of Brown-Forman Corp. in Louisville, Ky. Terms of the agreement were not disclosed.

## TECSYS ELITE™ SERIES

### The Leading Open Systems Software for Distribution & Manufacturing

#### The Distribution Series

From quotations to re-plenishment, The Distribution Series balances the demands of customer service excellence and the need to optimize costly inventory levels.

#### The Manufacturing Series

An extension of The Distribution Series, The Manufacturing Series is designed for both assembly and process-type manufacturing operations.

#### The Financial Series

Flexible and easy-to-use, The Financial Series handles multiple companies, divisions, currencies and taxation systems.

Our Customers range from mid-sized to Fortune 500 corporations. Our bilingual (English, Spanish & French) applications are 100% IBM/AS/400® based; an optimal platform for the open systems world.

TECSYS ELITE™ SERIES

BMC Software, Inc. has announced Version 2.3.07 of Data Packer for DB2, a hardware compression emulation product.

According to the Sugar Land, Texas, company, the product enhances a customer's ability to adopt hardware compression across the enterprise by making it possible to exploit and emulate the hardware compression to be provided in IBM's ES/9000 Models 9021 and 9121 mainframe computers.

This release also gives CPUs that have not been upgraded the ability to compress and expand hardware-compressed data.

An assortment of compression techniques is included.

Data Packer for DB2 is priced by CPU level, starting at \$8,000 for a perpetual license.

► **BMC Software**  
(713) 240-5900

Converg Computer Corp. has introduced the DataSeries line of data management products.

Consisting of hardware, software, robotic tape systems and support services, the DataSeries is based on Hewlett-Packard Co.'s Apollo 9000 Series 700 workstations at the low end. For high-throughput, high-capacity applications, DataSeries is based on Converg's C Series systems, according to the Richardson, Texas, company.

High-speed storage management software that transparently moves data between disk and robotic tape is included.

Pricing is from \$150,000 to \$5 million.  
► **Converg Computer**  
(214) 497-4000

BGS Systems, Inc. has introduced its Best/i for Unix software.

According to the Waltham, Mass., company, Best/i for Unix offers facilities to centralize the performance and capacity management functions in distributed environments.

Best/i for Unix integrates with the BGS Performance Assurance framework to provide capabilities such as projecting future requirements, tracking long-term performance, solving day-to-day performance problems and reporting to man-

agement and users on past, present and future performance to support recommendations and justify expenditures, according to the company.

An enterprise with 50 workstations and servers can license Best/i for Unix for approximately \$1,000 per node.

► **BGS Systems**  
(617) 881-0000

Four Season Software has announced a graphical version of 4S-Report, a report writer for end users and application developers.

According to the Edison, N.J., company, the product can generate queries and create complex, professional reports that run on MS-DOS, Unix (including OSF/1) and VMS.

Users can create reports that access an assortment of databases, including those from Oracle Corp., Sybase, Inc., Informix Corp., and Teradata Corp., as well as C-ISAM, Cobol and ASCII files.

Key features include interactive WYSIWYG creation of reports, point-and-click data dictionary fields for placement on reports, point-and-click application of selection criteria, an extensive pop-up help at every level, and report designs designed as sets of modular, linked blocks.

Pricing for 4S-Report ranges from \$300 to \$57,000, depending on the platform and operating system.

► **Four Season Software**  
(908) 245-6067

#### Product shorts

Cl/Cir Information Management, Inc. has announced the Deduction Management System, a software tool designed for IBM's AS/400. The software tracks invoice deductions and automates follow-up procedures. Users can identify internal errors, shipping problems, seasonal trends and customers who abuse write-off policies. Cost: \$9,000 to \$75,000. Cl/Cir Information Management, Chicago (312) 322-0159. ... Lattice, Inc. has introduced Lattice Client Server Remote, an AS/400 database access utility that lets PC applications dial into an AS/400 and directly access records and files. The product eliminates the need for terminal emulation, protocol converters, PC support and ASCII workstation controllers. Cost: starts at \$150. Downers Grove, Ill. (708) 768-4060.

# Application Development

## Bank vaults into world of objects

### Tools spell success in distributed application project

By Tim Gresham

Building distributed applications with object-oriented development tools is not for the faint-hearted. Yet it is probably the only way reliable, maintainable distributed applications can be built, said Amarjeet Garewal, vice president and senior systems architect at Bank/America Corp.

Three years ago, Garewal began investigating how Bank of America, with a data operation based in Concord, Calif., could manage the configuration of its California Data Network, an SNA network connecting numerous IBM mainframes, 25,000 IBM PCs and 1,500 OS/2 LANs at more than 1,000 sites across the state.

In addition to managing the network configuration, the bank needed a way to manage the complex, highly dynamic configuration of software on each network node.

Speaking in Toronto at the recent Executive Symposium on Object Technology, Garewal said the management system had to minimize its demands on each branch's limited bandwidth by being a truly distributed application.

Such an application could use IBM's Systems Application Architecture Advanced Peer-to-Peer Networking protocol to provide program-to-program communications across the network, and it should be created using object technology.

Garewal chose Smalltalk as the implementation language, rejecting C++ partly because he

believed it made it too easy for programmers to write non-object-oriented code.

The only Smalltalk tool available on OS/2 in January 1991 was one offered by Digitalink, Inc. in Los Angeles. Garewal bought a copy and found that it provided good performance, incremental compilation and portability across platforms and required no runtime license fee.

Winning corporate approval for a project dependent on tools with little track record was

Smalltalk is at the core of the Network Configuration Facility

complicated by the fact that conventional methods for determining return on investment were unavailable, Garewal said. To win their trust, Garewal promised to demonstrate working prototypes to senior management every month.

Garewal did not bother looking for object technology experts for his development team. Instead he focused on those candidates who could adapt quickly to change, who had experience

## Oracle's CDE draws praise, suggestions

### Users offer ideas for improving tool set

By Kim S. Nash  
EDGWOOD, CALIF.

Oracle Corp., now in full production with its Cooperative Development Environment (CDE) tool set, is winning praise from early CDE users and attendees at the recent International Oracle Users Week, who noted the steps Oracle has taken to make the tools more usable, as well as supporting Windows.

But parts of the 14-product CDE set still need work, the users said.

CDE is a set of application development aids, in production since late August, that range from report writers to code generators to a computer-aided software engineering (CASE) repository. Some of the tools existed before Oracle invented the CDE monitor last year, while others, such as OracleBook, have been created since then.

The items that should top Oracle's "to do" list, users said, are

fixing customers that CDE products have been thoroughly tested against Oracle 6 — not just the Oracle 7 database.

"We've been working on this issue for a few months now but have seen no definitive Oracle response," said Michael Aberry, chairman of Affinity, a special interest group of major Oracle database and CDE users.

"Telling customers to upgrade to Oracle 7 is not a solution," Aberry said, because "a lot of us aren't ready to move to 7 as quickly as we're ready to use CDE." Cost is an issue; so is the time it takes to convert databases and applications to the newer version, he said.

Nevertheless, CDE may force Oracle 7 upgrades at some shops. "We do have a beta copy of CDE tools right now, which is part of the reason we want to move to 7," said Dave Heck, manager of the information engineering services unit. Oracle, page 72

## Introducing

# The greatest advance in COBOL programming since the Post-It™ note!

COBOL Source Analyst (CSA) is a new, fully interactive productivity tool that allows you to quickly analyze complex COBOL source code directly from SPF/PC. With CSA you can follow your logic paths on the screen, without using Post-It notes, paperclips or all 10 fingers! And, all within SPF/PC!

CSA is an optional extension of SPF/PC v. 3.0 that provides powerful new capabilities, such as:

- **Navigations**— allows rapid examination of the branching logic of a program;
- **Outline**— provides hierarchical views of the program structure that can be expanded, collapsed and printed;
- **Analysis**— displays verbs and logic paths to see how a program is organized;
- **Syntax Checking**— highlights common syntax errors — before compiling!

CSA supports COBOL 1980, OS/VS\*, Micro Focus\*, CA-Realix\*, ANSI-74 and ANSI-85.

And, for a limited time, you can get CSA for just \$149, saving you over 60% off the list of \$395! Call 800-834-8380 and order today!

1040 Marina Village Parkway  
Alameda, CA 94501-1041

COBOL Source Analyst is a trademark and SPF/PC and the CTC

Two PCMCIA 2.0 Slots,  
Type II (5mm) and  
Type "IV" (16mm):

Twice the expandability.  
Easily accepts multiple  
cards including hard disk  
drives, modems and net-  
work adaptors.

**LCD Status Bar:** Delivers an instant read of the  
battery life remaining, power-saving mode, and  
a host of other key notebook settings.

**Blazing 33MHz i486 SL:**  
With built-in coprocessor  
support, delivers the  
ultimate in notebook  
processing power.

# Apple's AOCE gets nod

## Plans to incorporate technology under way

By James Daly

CUPERTINO, CALIF.

Apple Computer, Inc. received a vote of confidence for its long-awaited Apple Open Collaboration Environment (AOCE) last week as nearly three dozen third-party software developers announced products designed to take advantage of the nature of the newly introduced technology.

AOCE is a set of application programming interfaces that promise to tie together the strands of voice mail, fax, electronic mail and remote paging into an integrated communications fabric.

Developers, particularly those showcasing speech recognition technologies, had a lot to talk about. Articulate Systems, Inc., for instance, is readying a release of PowerSecretary, a speech dictation system with which users can prompt their Macintoshes to perform mundane administrative tasks such as sending

faxes and retrieving E-mail.

Milpitas, Calif.-based Octel Communications Corp. demonstrated a gateway that allows users to visually display, access and manage voice and fax messages stored in an Octel voice processing system from a Macintosh.

Useful Software Corp. in Danvers, Mass., was promoting its similar \$260 Useful Voice Processor E-mail system, while CTV Development in Geneva, unveiled Voice-Access, which offers remote retrieval and delivery of pager messages.

### Coming soon

Apple will dribble out most any portions of AOCE in the next six months. PowerTalk, the new collaboration software, will be available immediately with System 7 Pro, a \$149 system software release with communication features geared toward heavily networked corporate Macintosh users. However, the same PowerShare Collabora-

tion Server package, which centralizes management of the AOCE services, will not ship until at least December.

Another entry was presented by Axion in Sunnyvale, Calif., which showcased its Mail video-mail software application. When coupled with the Spy desktop editor or video still picture camera and the iMovie capture board, photographic users can send video E-mail to each other.

On the networking side, Caravelle Networks Corp. in Neponset, Massachusetts, brought out Networks, a network monitoring application. Networks keeps tabs on devices and services on a network and then uses pop-up windows to alert network managers of problems. Networks will cost \$995.

Digital Equipment Corp. announced that it will incorporate AOCE technology into its TeamLink for Macintosh family of products. Digital will use AOCE to provide transparent X.400 message transport and, later on, X.500 directory services to Macintosh mail-capable

applications that use AOCE.

Ex Machina, Inc. displayed Notify for PowerTalk, a \$149 wireless messaging gateway that allows a PowerTalk savvy application to send full-text messages to a pocket page, PowerBook portable or Newton MessagePad.

RSA Data Security, Inc. announced that it has embedded its patented Public Key Cryptosystem encryption technology in System 7 Pro. RSA Digital Signature also allows users of System 7 Pro to verify the author of a given electronic document and verify that a document has not been tampered with.

### Real-time news

Mainstream Data, Inc. in Salt Lake City released a PowerTalk gateway for Mainstream NewsNet, an information service that delivers real-time news to Macintosh via FM radio and satellite.

Other vendors unveiling products included Aladdin Systems, which announced its \$129 StuffIt Deluxe compression package, and CE Software, Inc., which showcased its QuickMail applications.

MicroSoft Corp., Basys Systems, Inc. and GII Information Services also voiced approval for PowerTalk without unveiling specific products. MicroSoft said it will include support for PowerTalk and System 7 Pro in future versions of Excel, Word, PowerPoint and Works.

Traffic Manager

## Oracle

CONTINUED FROM PAGE 69

at Nationwide Life Insurance Co. in Columbus, Ohio.

Meanwhile, Oracle pleased users such as Mark Farbman, president of the Oracle Applications User Group, by recognizing, as he noted, that PCs exist in the application development shop. After it announced CDE, Oracle realized it had failed to provide graphical desktop tools comparable to products such as Gopix Corp.'s SQL Windows, Microsoft Corp.'s Visual Basic or PowerSoft Corp.'s PowerBuilder.

So before going full production with CDE two months ago, Oracle switched gears: It would ship a complete set of CDE products for Windows before those for its bread-and-butter Unix operating system.

**PC-oriented**  
Windows editions of CDE offerings "show that Oracle is moving with us into a more PC-oriented development environment," said Farbman, who is also a database architect at Burlington Coat Factory in Lebanon, N.H.

Users might want to pay attention to changes in Forms 4.0, a code generator and lineplotter of CDE. For example, Oracle's makeover of Forms into a graphical tool that is itself capable of creating graphical applications means that developers have a longer learning curve in front of them, according to Timo Sainio,

ta, an analyst in Oracle's worldwide technical support group for tools.

Sainio advised users to triple typical development time allotments for initial Forms 4.0 projects.

### Coverages continue

That warning has not scared off users such as James Bennett, vice president of technology at First National Bank of Chicago. The bank is in the midst of converting applications generated with SQL Forms 3.0 to Forms 4.0. Bennett is working on a customer information system that, when complete, will host 600 to 700 users.

"This might sound corny, but CDE is fun to work with," Bennett said, adding that he has experimented with working imaging functions into applications built with CDE products.

No matter what Oracle might do to improve CDE, no vendor can provide for every user's every need, according to Brad Stokes, a database analyst at Synex, a pharmaceuticals firm in San Francisco.

Synex uses CDE tools to build applications and also to house companywide business information. Products such as Oracle CASE Dictionary help ensure the Oracle CASE meets rules handed down by the Food and Drug Administration.

Although Synex is pleased with reports generated with the product, users are querying using extensions to Oracle's SQL are still needed because of the intricate nature of FDA regulations, according to Stokes.

# The Client/Server Solut

The SAS System for Information Delivery is a new concept in client/server software. It provides workable strategies for overcoming the barriers that stand between people and the information they need. For instance, the SAS System strategy for **universal data access** makes it easy to reach all your diverse "islands of information"—including host system files, flat files, and corporate DBMS's such as DB2® ORACLE® and dBASE®.

An exclusive MultiVendor Architecture™ is behind the SAS System's strategy for **hardware independence**. Applications run the same way across PCs, workstations, and host systems—making true client/server computing a reality while exploiting the particular strengths of each platform.

Address the needs of users at every level with the SAS System's strategy for **interface versatility**. An EIS interface puts decision makers in command of the facts—when they need them. There's also a task-oriented menu-driven interface for business

# The SAS Enterprise Wide In

# ion for EIS and Beyond

analysts... plus object-oriented and full-function programming environments for applications developers.

The SAS System's **applications integration** strategy provides one seamless solution for virtually any application that involves accessing, managing, analyzing, or presenting data. Choose integrated tools for decision support, reporting, financial analysis, market research, project management, quality improvement, and more. All backed by SAS Institute Inc., a vital force in the information

industry with a strong commitment to helping you succeed—and an unrivaled dedication to training, documentation, technical support, and consulting services.

See for yourself how the SAS System of software brings out the best in your hardware and the people who use it. Just give us a call at **919-677-8200** for a free video, plus details about a free software evaluation.

## Application Development

### Bank

CONTINUED FROM PAGE 68

ence with more than one language, who had a conceptual grasp of every aspect of the bank's network and who were willing to work 12-hour days for the duration of the project.

Two were assigned to develop the required Smalltalk representation objects; one looked after the graphical user interface; one produced all the CICS Cobol II code needed to manage transactions and configuration data; and one took responsibility for testing and end-user liaison activities. Garrewal acted as chief architect and brought in a mentor for the team, a senior technologist from Digitalink whom he paid \$10,000 a week for eight weeks, spread over the six months of the planning and initial development.

The team used no formal methodology for analysis and design and instead developed an iterative development methodology of its own.

It began development in earnest in June 1991. By the end of that year, it had the development infrastructure in place and had defined the problem domain. The next six months saw end users testing a series of ever-more refined development prototypes, a process that produced more than 600 changes in the user interface.

By September 1992, the development documentation had been created, and production system deployment began in October. By the end of November 1992, fewer than a dozen operators were using the new Network Configuration Facility (NCF) to manage the configuration of the entire network.

**Not just object-oriented**  
The NCF architecture required an object persistence manager, which the team created using IBM DB2 and the OS/2 Database Manager. Garrewal expressed little patience for those who insist that only an object-oriented database management system has the speed to support object technology applications.

"There is no business problem," he declared, "that cannot be modeled using either a relational database or an object-oriented database."

The team also had to create several other management tools from scratch: object schema, relational schema and object life-cycle management tools were all developed using Smalltalk, while uniform-of-work management tools were created using Smalltalk and CICS.

Garrewal cautioned other corporate

developers approaching object technology to expect high costs for training and tools and a six-month learning curve. He warned of a shortage of tools suitable for team development, managing object life cycles and testing and performance analysis. And the tools that are available, he said, come with inadequate documentation and example code.

On the positive side, he said object-oriented programming systems enabled his developers to create a closer representation

of the business problem, reuse prototype code, more quickly develop complex functions and perform simultaneous analysis and development.

Garrewal said he was also pleased to discover that the Cobol II code required to link his back-end legacy systems with the Smalltalk-developed components proved easy to write and change.

Granahan is a free-lance writer in Paris, Ontario.

## Application Development

AutoTester, Inc. has announced AutoTester 2.0, an advanced testing and verification tool for the Windows operating system.

According to the Dallas company, the product was designed to solve the complex problems associated with testing graphical user interface applications, in-

cluding test synchronization, advanced control querying and manipulation and dynamic window placement and positioning.

Word processing-type editing of tests including features such as cut/copy/paste, find/replace and adjustable fonts are provided with the software.

AutoTester 2.0 costs \$5,000 per workstation.

(814) 365-1196

V.I. Corp. has introduced DataViews 9.5, a programming tool created for building graphics to monitor and control real-time processes.

This release features Motif Object Dynamics, a software tool that enables Open Software Foundation Motif developers to seamlessly integrate animated graphics into Motif interfaces.

Users can also construct fully animated interfaces for analyzing, visualizing and regulating real-time financial, in-

ustrial or scientific processes.

By eliminating the need for complex coding, the product can reduce development time by up to 80%, according to the Northampton, Mass. company.

A development license for the Unix version of DataViews 9.5 costs \$17,700. Pricing for the Windows NT version will be announced during the first quarter of 1994.

► **V.I. Corp.**  
(413) 696-4144

NovelNet, Inc. has announced RPCware, an addition to the company's remote procedure call (RPC) middleware tools.

According to the Southboro, Mass. company, the RPC compiler generates client and server code for RPCs that can be compiled as Novell, Inc. NetWare Loadable Modules, UnixWare C language executables and DOS/Windows Dynamic Link Libraries.

RPCware uses the transport-independent RPC supported by Novell for both TCP/IP and SPX/IPX protocols.

RPCware is compatible with the earlier versions of RPC supported by Sun Microsystems, Inc.'s Network File System.

Prices range from \$995 to \$4,995.

► **NovelNet**  
(609) 690-5222

Wonderware Corp. has announced a series of products and performance enhancements for its NetDDE connectivity software family.

A suite of software development kits is being offered that enable Unix users to add Dynamic Data Exchange (DDE) and NetDDE capabilities to applications running in the most popular Unix operating systems, thereby facilitating the exchange of data with other operating environments such as Windows and Digital Equipment Corp.'s VAX/VMS, according to the Irvine, Calif. company.

Enhancements include the addition of Wonderware's fastDDE protocol to all NetDDE software development kits and TCP/IP support.

Prices start at \$2,500.

► **Wonderware**

Progress Software Corp. has announced the Progress Version 7 developer's version.

The product is a cross-platform application development environment. It is based on the Progress fourth-generation language (4GL), designed for rapidly developing and deploying mission-critical applications across client/server, host-based and mixed computing environments, according to the Bedford, Mass. company.

Capabilities include graphical and event-driven extensions to the 4GL, an enhanced DataServer architecture and performance-related enhancements to the Progress relational database management system.

Progress Version 7 is priced by separate component or in bundled packages. Prices range from \$250 to \$55,120.

I'LL TELL YOU  
HOW BELL ATLANTIC  
**PAID OFF**

We're Crestar. With more than 260 branches in Maryland, Virginia and Washington, D.C., we're convenient to all the places our customers live, work or shop. Customer service is the key to our success. And the companies of Bell Atlantic\* play a significant role in applying technology to provide superior customer service. One way is our Retail Automation Network that depends on Bell Atlantic's High Speed Data Network. Only Bell Atlantic had the infrastructure in place to provide the data solutions we needed. Thanks to Bell Atlantic, every location has immediate access to all customer information, at all times. This allows the branches to open accounts and cross sell additional services faster, improving productivity along the way. As we acquire new branches, Bell Atlantic is there to help bring them on-line and integrate them into our network within 72 hours, sometimes within 24 hours. And Bell Atlantic monitors the entire network 24 hours a day. The network has proven reliable—on-line an astounding 99.8%. Even now, they're installing LANs and workstations that integrate many of our locations. Pleasing the customer is our main goal. Obviously, it's Bell Atlantic's goal too. So call me, I'll tell you how Bell Atlantic was right on the money.

 **Bell Atlantic**  
We're More Than Just Talk.

Callers will hear a recorded message from Mr. Guster, and will be given the opportunity to leave a message for him or to speak with a Bell Atlantic representative. \*The Bell Atlantic family of companies includes the Bell Atlantic Systems Group, New Jersey Bell, Bell of Pennsylvania, Diamond State Telephone, the C&P Telephone Companies and other communications and information management companies. © 1993 Bell Atlantic.

# Make your re-engineering team's wishes come true.

## Announcing Computerworld's 2nd Annual Re-engineering Team of the Year Award.

Have you successfully completed an ingenious re-engineering project? Don't keep the good news bottled up — enter the 1993 *Computerworld* Re-engineering Team of the Year competition.

### Here's the rub

We're looking for re-engineering efforts that have:

- Radically redesigned business processes.
- Shown quantum-leap improvements over previous business processes.
- Made a significant contribution to improving the business' bottom line and competitive position.
- Displayed IS/end-user teamwork.

### To enter, grant us three wishes

1. Submit by Nov. 1, 1993, an up-to-1,500-word description of the re-engineering effort. This statement should include the reasons for and scope of the project, a description of the business processes before and after they were re-engineered, how the re-engineering project supports the company's strategic goals, the role of the IS organization and how IS worked with users, how the project was accomplished, any benefits already achieved and

anticipated benefits. Include documentation to support your claims.

2. All entries must be signed by the IS executive and one of the business unit executives who sponsored or led the re-engineering team.

3. Include the name, address, phone and fax number of the two entrants, along with two or more references who are familiar with the project and are willing to be interviewed. One reference should be a beneficiary of the project: a customer, supplier or user from the sponsoring business unit.

### Fame will be yours

The winner will be announced and profiled in an upcoming issue of *Computerworld*. A special Re-engineering Team of the Year trophy will be presented in February at an awards ceremony attended by top IS executives.

### Send your application to:

Re-engineering Team of the Year Award  
*Computerworld*  
375 Cochituate Road  
Framingham, MA 01701  
Fax: (508) 875-8931

### For more information, contact:

Joseph Maglitta, senior editor/corporate strategies, or Allan E. Alter, senior editor/management, at (800) 343-6474.

Contest is open to all end-user organizations, consulting firms and system integrators. Companies selected for consideration will be contacted by a representative of CW Publishing, Inc. for further details and verification. The winner will be chosen by a panel of *Computerworld* editors.

# Management

# Training on thin ice

Do workers have the skills they'll need tomorrow? That question, once academic, has become profoundly important with the downsizing, rightsizing and career-shifting that have torn through the economy over the last few years. According to the American Society for Training and Development in Alexandria, Va., U.S. companies spend \$30 billion, or 1.5% of payroll, on employee training annually.

Using the computer screen as a vehicle for training workers is not new. Computer-based training (CBT) has been around for well over a decade and is available on platforms ranging from stand-alone PCs to mainframes. Until now, however, CBT's use has been relatively narrow: It is used primarily to teach people about computers and software, not how to perform their jobs better or refine

As corporate training goes high-tech, coordination between IS and human resources departments becomes critical. But the walls between them are still rarely breached.

Source: SB Communications, Hingham, Mass.

► Union Carbide's Ted Smith: HR now manages instructor-led courses in software

Training, page 82

## Training

CONTINUED FROM PAGE 81

general-purpose business skills.

But many observers say that's about to change, both because firms are desperate for faster ways to teach workers new jobs and problem-solving skills and because of technological improvements — multimedia computing in particular (see story page 84).

### IS challenges

This broader definition of CBT presents the information systems group — in many cases the de facto owner of CBT for computer-skills instruction — with several important managerial challenges:

- How should it coordinate with the human resources (HR) training department or the business units requiring computer-based training?

- Who owns this high-tech training?

- Who authorizes capital investments in hardware and the software needed to develop and support it?

- In the help desk, typically run by the IS shop, part of the training operation?

- What are the roles of the departments or business units that CBT will benefit?

Even today it can be difficult to tell where training leaves off and an IS function picks up. Take the case of the help desk:

"To what extent does the help desk become a training organization?" asks Ellen Kitzis, vice president at Dataquest, Inc.'s Worldwide Services Group in Framingham, Mass. Who ought to call the

shots, she asks, if HR takes responsibility for classroom-based PC training but users call IS when they get into trouble? At 15 when they get into trouble?

The best examples of coordinated IS/HR efforts are found in "businesses that have recently gone through business process re-engineering," Kitzis says. In these cases, training is not seen as something separate from information systems but is "tied to a larger change effort in the organization."

For example, IDS Financial Services, Inc. in Minneapolis is re-thinking its business processes with an eye toward providing its customer support agents with "electronic performance support" that will dramatically reduce the time spent training employees.

"Previously we spent 12 hours on instruction for agents doing money transfer to IDS accounts," remarks Betty Mackay, director of service operations training at the American Express Co. subsidiary. Mackay notes that a bank transfer is a four-minute task, but because of its complexity required hours of classroom instruction and a full month of practice.

Mackay says she expects the new customer service interface — implemented on a Macintosh platform and featuring multimedia, a rules database and artificial intelligence components — will reduce training to between 30 and 60 minutes of practice. IDS could ultimately have 800 to 1,000 users on this system or others like it, she said.

"We assumed the underlying systems would stay the same, but we wanted to change the interface so that people could understand it easily," says Mackay, who worked on the project with members of IDS' IS group and staffers with a background in instructional design.

Significantly, Mackay is a trainer with the business unit, not with IDS' IS or HR department. To some, Mackay typifies the trend of authority over training's increasingly moving out of the hands of either the IS or HR department.

"The business units themselves are taking on the responsibility, using HR and IS as advisors," says Don Arnowdese, vice president at CSC Index, Inc. in Cambridge, Mass.

As corporations re-engineer and move to a "process model" of work — in which activities cross departmental boundaries — training will be incorporated into a larger picture, he says.

## Why Johnny can't train

### Computer-based training has its limits, but multimedia may transcend them

**T**he bluish is off the rose with computer-based training (CBT), which the industry heralded as an ideal, general-purpose teaching tool in the 1980s.

"Last year only 10% [of survey respondents] were using it to teach nontechnical skills," says Jack Gordon, editor of Minneapolis-based *Training Magazine*.

The reason, according to some, is that some kinds of instruction are not suitable for self-study.

"Self-study, like CBT or video, is an effective way to build knowledge but not skill," says training consultant Dennis J. Kravetz. To teach someone golf, he says, one could have someone watch golf. "But you won't become a competent golfer unless you get a golf club in your hand."

Don Arnowdese, vice president at CSC Index in Cambridge, Mass., agrees. "There's still nothing like sweating together in the same room," he says, referring to teaching

management concepts, which he contends will never be reduced to a software program.

That could change as multimedia computing comes to the desktop, enabling video and audio training material to be incorporated into the working life.

One of the most bullish proponents of this future is Gloria Gerry, a well-known consultant in Tolland, Mass. The key, she says, will be multimedia implemented through the use of object-oriented programming techniques.

"The object database could be reused across applications, including training," she says. In other words, training could no longer be a separate application but would be wedged into the work application itself.

Gerry insists that well-designed software — either custom or commercial packages — can teach users everything they need to know.

"Training is now largely compensatory for badly designed applications," she says.

— *Ellis Booker*

"Process owners" within the business units, he says, will consult with IS for technical know-how and with HR/training for coursework design. But business unit or departmental responsibility for training remains the exception and not the rule. Few firms have any formal coordination among the three parties.

Better coordination between IS and HR, might, for instance, allow the help desk to feed the HR department information about subjects that users are confused about, which in turn would bring HR to modify the content or emphasis of its computer classes.

### For busy schedules

More typical is the situation at Union Carbide Corp. in Danbury, Conn., where for the past three years the IS department has had provision over CBT courses on Microsoft Corp.'s Windows, Excel and Word for Windows — all company standards.

"We have CBT mostly for people who don't have the time in the office for more formal training," says Ted Smith, manager of systems development. Instructor-led courses in software, once coordinated by IS, are now managed by outsourced trainers, who are managed by an education group in the HR department.

"We participated in the transfer about a year ago, and we evaluated the sources," Smith says. He adds that the IS department is also considering a separate group to handle technical skills development for its staff.

Elsewhere, mutual suspicions may hamper the chance for improved coordination.

## Chicago IS group

## From one executive... to another

By Ellis Booker

When the heavy hitters from in and around Chicago's information systems community gather quarterly to hear a vendor presentation, they are almost always promised a good show.

That is because the Chicago Research & Planning Group (CRPG), composed of more than 100 of the Midwest's top IS executives, insists on hearing from chief executive officers and chairmen. Period.

"In 1991 we brought in Jack Kuebler from IBM, and it was a very refreshing presentation," said Frank Diaz, president of Kemper Service Co. in Chicago. "He was a technologist talking about his firm, not a marketer." Diaz, a founding CRPG member, added that the IBM president fielded some "tough" questions.

Not all vendor CEOs have felt comfortable meeting a hundred or so high-level IS executives on their own turf. Attendees at Charles Wang's presentation last year recalled that the Computer Associates International, Inc. leader became a bit rattled under the questioning before settling down into a decent dialogue.

Still, many vendors want to go through this trial. This year the group has heard presentations from the following: Microsoft Corp.'s Bill Gates; Apple Computer, Inc.'s John Sculley; Netframe System, Inc.'s Carlton G. Andrait; and EMC, Inc.'s Dick Egan.

"So many firms want their CEOs to talk to us that we have gone to a luncheon format in addition to the quarterly meetings," said CRPG Executive Director Richard G. Arns.

Incorporated in 1991, the CRPG has a membership roster that reads like a "Who's Who" of Midwest IS departments. The group's founding members, who began talking in 1989, were Warren Ousley, at the time president of LaSalle National Service Co.; Peter Miller, corporate senior vice president of First National Bank of Chicago; and Diaz.

Another example of the group's chutz-

**"We're building a 'commodity exchange' for information transfer."**  
Robert S. Arns  
Chicago Research & Planning Group

path is the fact that, unlike broad-based professional organizations like the Society for Information Management, CRPG is exclusively an executive club.

In fact, the CRPG is one example of the increasingly vocal and powerful local user groups that have sprung up in recent years [CW, June 7]. These groups have emerged as the pace of technological change in business has accelerated, and open systems and distributed computing have cracked the market hegemony of firms such as IBM and Digital Equipment Corp.

Like these other groups, the CRPG does attempt to use its collective clout to lobby vendors for better ser-

vice, features and prices.

In addition, the Chicago group is explicitly dedicated to helping members avoid mistakes by sharing experiences.

"We're sharing [technical] classes we do in-house," said Peter Miller, corporate senior vice president at First National Bank of Chicago. The group's so-called Education Training Consortium offers more than 100 courses at member sites.

## Member 'database'

But the consortium is just the first phase in the CRPG's ambitious educational initiative, according to Arns, who is now engaged in an innovative project that will collect the requirements (and real-world experiences) of CRPG members and make them available to training vendors and other parties.

"We're building a 'commodity exchange' for information transfer that will link users, universities and vendors," said Arns, who hopes to have an on-line database supporting the project within a year.

All its activity has put the CRPG on the map.

"We have had a lot of requests from out of town to join," Diaz confirmed. "But we intentionally want to keep it here. That was a front-end decision."

For Diaz and others, this rule is not as strict as much as it is practical: To fulfill the group's mandate of providing an information network to exchange ideas and approaches, the members ought to be in close proximity.

"We're not out to build an empire," Miller agreed.

## Training

CONTINUED FROM PAGE 82

nation between the HR and IS departments. IS may feel HR professionals don't have the know-how to train workers on computers; HR might think the IS staff doesn't know how to teach. In fact, tensions between the two groups predate the widespread deployment of networked PCs or the more recent interest in multimedia for training, those in the field point out.

"It began when interactive laser discs came on the scene," says Chuck Gorman, president and chief executive officer of Learn PC, Inc. in Minneapolis. The interactive laser disc has been used as a skill-development tool — as general as an adjunct to classroom instruction — for eight to nine years. "That started the question, 'Who owns and manages this?'"

## More teamwork

Although the HR and IS departments are minimally coordinated today, in the future they will work together on a range of projects, predicts Dennis J. Kravetz, a training consultant in Rolling Meadows, Ill.

"What HR can contribute is [knowledge about] how adults learn, how to structure training curriculums and courses," he says. Coupled with the IS department's contribution — an understanding of what a particular hardware/software combination can provide — the result can be "really outstanding products," Kravetz says.

Take the case of ITT Hartford Insurance in Hartford, Conn., which has developed and deployed a "proof of concept" electronic performance support system, a client/server application that includes reference, training demo and expert-system-like coaching to property analysis underwriters. A proof of concept system is defined as one that may not necessarily be purchased as a production application, Kravetz says.

"We wanted to see if it was technically possible to do it and if it was worth doing," said Celia Duke-Moran, an education consultant in ITT Hartford's HR department. "The answer was yes to both questions."

## Broad-based participation

Even more striking than the pilot application, which eventually will be rolled out to some 4,500 users in 44 offices, is the fact that the team who built it included representatives from the business unit, the IS group and the training department.

"We were successful because application developers brought us in at the beginning, not at the end," Duke-Moran says. She contends that if handled properly, such systems will not territorially threaten the training department.

"Training is never going to go away," she says. "But I think trainers will be required that some portion can be brought to the desktop. It makes their role clearer."

"It was taking us ten days to get price quotes in a market where prices changed hourly."

*- Chevron Canada*

"Our client, TRW, found that getting information for project planning was simply too slow."

*- NetBase Corporation*

"Teachers were spending more time on reports than on teaching."

*- National Computer Systems*

"We had multiple systems from two companies, all with different looks,  
all taking data and processing it in a different way."

*- Chemical Bank's Geoserve' Group*

"Despite automation, drafting was still a paper intensive process."

*- Aetna Life and Casualty*

"There was no easy way to get critical ticketing information to the PCs on agents' desks."

*- Air France*

More and more companies are solving their business-critical problems with Microsoft<sup>®</sup> products and expert advice from its partners. Here are a few solutions:

### **"Changes that took 10 days now take less than an hour."**

Chevron Canada was in a crisis fueled by a 20-year-old system.

The pricing for its orders was being calculated manually, then sent to a mainframe. But when prices were deregulated in 1985, the old system simply overheated.

Chevron formed a task force of technical staff and end users. They developed a client-server system that used Microsoft products like the

Visual Basic<sup>™</sup> programming system, SQL Server, LAN Manager, and the Windows NT<sup>™</sup> operating system.

These days, accurate pricing information on 300 products can be accessed online by 200 users. Price and tax adjustments can be handled manytimes faster, and paper-handling costs have been cut in half.

### **"Now our client's projects can turn on a dime."**

Aerospace giant TRW approached NetBase, a Microsoft Solution Provider, to help it manage its projects more efficiently. The problem: Getting project data from the mainframes was expensive and slow.

NetBase used Microsoft Visual

Basic to build a multiuser system with a graphical front end, and the Microsoft FoxPro<sup>®</sup> database for real-time reporting. The result: Mainframe expenses were cut by 40%, and TRW's profitability is up 20%.

### **"Schools applied technology to cut administrative costs."**

The education division of National Computer Systems (NCS) had been handed a classroom problem: In public school systems around the country, teachers were still managing reports by hand, and losing instruction time.

NCS, a Microsoft Solution Provider, suggested a modular system that uses Microsoft Visual C++<sup>™</sup> development system, FORTRAN

PowerStation 16, and FoxPro.

With the new Assure™ assessment system, educators can assess, track, and report student progress against state curricula and outcomes. And it has lowered costs while increasing flexibility in report generation and the tracking of student progress.

So teachers have more time to do what they do best. Teach.

### **"Now our managers get a unified, consistent view of the enterprise. Instantly."**

After a 1992 merger, Chemical Bank's Geoserve Group found itself with multiple computer systems.

Geoserve created harmony by combining the Microsoft Access® database and SQL Server through ODBC, a database access technology, to generate reports based on customer revenue and product data.

Now business information can be accessed directly by managers, who use it to analyze world markets and find the right financial products for the right customers.

### **"All the information our drafters need for a booklet is now at their fingertips—on a Windows screen."**

Aetna produced up to 6,000 booklets a year, each outlining a benefits plan for a different corporate customer. The problem: They used dead-end text processing and document management systems to do it.

The solution was an integrated document management system built around Microsoft Visual C++ and Word for Windows®, plus a front end created with Microsoft Visual Basic.

As a result, Aetna has cut the time required to draft new booklets by more than 115 hours a week, while improving the final product.

### **"Agents can grab data, work with it, and use it to give customers better service."**

In 1992, Air France's ticketing data was in a holding pattern, stuck inside a proprietary database that ran on mid-range equipment.

The airline, in partnership with

MediaServ, a Microsoft Solution Provider, rightsized to a system with Windows NT, SQL Server for Windows NT, Visual Basic, Visual C++, and Microsoft Access.

Now agents can get data easily, and even analyze it on their own. What's more, the system can now be passively maintained by one person, instead of a full-time team of five.

**Microsoft®** • At Air France, SOLUTION PROVIDER Aetna, and hundreds of other companies, people are turning to Microsoft to get results like these for line-of-business problems.

They're finding the right tools for any job, no matter how mission-critical. They're also finding complete support for Windows-based application development.

That support includes the Microsoft Solution Providers: a network of thoroughly trained, certified experts who know their clients' businesses inside and out.

For case histories on solutions using Microsoft products, or for a referral to a Microsoft Solution Provider near you, call us at (800) 426-9400.

And start turning your company's problems into solutions.

Computers & Automation

"Information is power and getting more data is a safe bet," said Tom Cullen, president of Cullen Associates, which is just one of many industry publications that specialize in helping companies "to be more competitive on a regular basis."

"It is an investment in the future," said Cullen, who is president of the New England Division of Cullen Associates.

Investor's Business Daily

March 25th, 1993

Technology

"THERE'S A NEED" is the common refrain. The percentage of executives who regularly use computers nearly doubled in four years. In 1979 from 10 to 19 percent, according to a recent survey by the American Advertisers Council. Fourteen times that, they are getting more money's worth from corporate computer systems.

THE WALL STREET JOURNAL

## Get the news of IS before it's the news of business.

Why not do what the nation's leading business publications do when they want the latest news in IS. Go to the source — COMPUTERWORLD.

Week in and week out, 58 reporters, writers, and designers work around the clock to bring you the latest breaking news from all over the world.

No other newspaper covers the who, what, when, why, and how of IS in greater depth than COMPUTERWORLD. You'll find stories on everything from rightsizing to reengineering, communications to client/server computing, network management to new technology.

It's no wonder our professional peers named COMPUTERWORLD the "Best Computer Newspaper" at the Eighth Annual Computer Press Awards. And it's no wonder over 139,000 IS professionals pay to subscribe to COMPUTERWORLD every week. Shouldn't you?

Our question:  
Where are the  
productivity  
savings?

By **New York Times**  
April 25th, 1993

**C**orporate executives appear to be more knowledgeable about computers and technology than ever before, but they have also become more demanding and less forgiving, a new survey has found. While they believe computers are important to their company's competitive advantage, they also say that they have not been getting their money's worth.

The survey, conducted by the computer market research firm, International Data and Analysis Corporation, also found that 81 percent of top executives are personally using computers in their daily jobs, nearly double the percentage in 1989. The last time the survey was fielded four years ago.

More than 200 chief executives, chief operating officers, and chief financial officers, representing a broad range of industries, participated in the study, the results of which were published in **Investor's Business Daily** last week. Annual company sales ranged from \$250 million to \$20 billion.

### CUSTOMERS SAY THEIR SAY TOO

IBM clients should forget about hiring another agency to replace John Akers as CEO. Another executive should find a whole lot easier people. So says a survey of 100 clients of IBM services at 100 companies that spent at least half their computer budgets on IBM products. The survey, conducted by **International Data and Analysis** and **Parke-Bennille**, a maker of pneumatic and hydraulic components, found that IBM's organization into smaller business units should go further. Companies in addition to IBM are moving into smaller industry businesses, including Steven Jobs. The Next CEO of Apple Computer, which IBM purchased from manufacturer to PC's uses the same software. Says Jobs: "IBM's troubles are not unique. They are much more serious from a hardware strategy, and the Nexties are the ones who are getting it right."

John Akers is

A general IBM vice president. A survey of more than 100 IBM's largest customers found that 81 percent preferred someone with a technical background to be the company's chief executive officer, while 14 percent and technical expertise was not essential and 13 percent had no opinion.

But some industry sources say Akers' replacement is not a priority for IBM.

# out of SIGHT out of MIND [out of LUCK]

Some mission-critical wireless LANs get neglected because they are tucked away on the operations side of the business

BY KEVIN R. SHARP

The crowd parts as the stranger walks through a packed Kmart, his hand groping for the sleek, shiny gun on his hip. He raises it, aims — and fires.

But there are no shrieks or bloody corpses, and there will be no day-after headlines about a disgruntled employee on a shooting spree. That's because this stranger is a Kmart staffer who is checking the inventory status of waffle irons. The "gun" he is using is a wireless Symbol Technologies, Inc. data terminal with an alphanumeric keyboard, small display, laser bar-code scanner and radio unit. It's a handheld computer with a pistol grip.

In less than 7 seconds, information makes the 100,000-mile round-trip from that Kmart store to a Teradata Corp. machine at Kmart Corp. headquarters in Troy, Mich., touching 11 computing devices and eight networks along the way. In the end, the employee knows whether he has a match between what's on hand and what's on order.

**"When operations and merchandising determine that it is good for someone standing in the store to know a certain thing, the architecture enables that to happen."**

*Dave Carlson  
Senior vice president,  
Corporate information systems  
Kmart*

Kmart employees are part of a quiet revolution going on in back offices, on production floors and out in the field. Users are moving short bursts of mission-critical data over wireless networks to and from a host computer.

The most important weapon in the revolution? Transaction-processing wireless networks that use radio frequency communication to support the minute-by-minute processes by which corporations earn their revenue.

*Out of sight, page 80*

## In Depth: Out of Sight

CONTINUED FROM PAGE 88

These networks literally place a company's information resources in the hands and on the fork lifts of production workers.

But information systems managers traditionally haven't paid enough attention to issues in this area. That's because transaction-processing RF LANs aren't part of the sexy, high-profile world of corporate information and decision-support technology. Instead, they support the down-and-dirty world of operations, commonly the purview of all those "manufacturing types."

More startling still is that some IS groups view RF as a form of black magic with network topologies different from wired subsets, the whole area has become shrouded in mystery.

Let's smash the mystery to bits.

**"When a customer walks into a dealership, if you can't get him a part, he is going to go somewhere else. We make the commitment to ship the part anywhere in the U.S. in 24 hours. What drives us is RF technology is dynamic updates."**

*Roger Valentine  
Operations analyst  
Chrysler*

In a mission-critical environment, temporary interruptions in processing are taboo. Reliability and availability are paramount. To a firm such as Chrysler Corp. — where workers in a 1-million-sq-ft parts warehouse scan about 50,000 bar codes a day — a slowdown or interruption at that pace means customers won't get a part in 24 hours.

And the pressure of severe just-in-time (JIT) shipment constraints adds fuel to the fire. At Collins and Aikman Corp., a \$1.5 billion textile manufacturing company that supplies carmakers, JIT shipments have to be sequenced in the right order on a pallet and the right order on a truck. Employees use RF devices as they load a truck and gather information the company uses to generate shipping papers and electronic data interchange advance shipping notices.

**"Without an RF transaction-processing network, you'd have to write DTN sequences down and take them back into the office. The truck would be waiting. In the automotive industry, you don't make anybody wait around."**

*Harry Sanders  
Manager, manufacturing systems  
Collins and Aikman*

Communication reliability requires adequate RF coverage throughout an active work area, typically provided by some combination of RF controllers broadcasting through one or more antennas. Some types of RF networks, known as narrow band, support a few dozen users per frequency and cover about 1 million square feet indoors. Oth-

er systems, namely spread-spectrum systems, support 100 or more users and cover about 100,000 square feet indoors per cell (see story below).

Chrysler achieves transparency for its workers in its 1-million-sq-ft distribution center by having four in-building RFs. It has 31 RF terminals and two base radios attached to each frequency. Cable connects base radios to a controller. The

A network bridge is needed to move data between wired and wireless domains. The bridge uses a proprietary scripting language to develop transactions.

The transaction developers need to consider the limited display size of the RF terminals when deciding how to present information. The language needs to extract and format user data. The data must be transferred to a wired

area without modification.

However, except for one machine I know about (not yet on the market), wireless terminals never provide a full-screen display. If screens originally written for full-screen 3270 terminals are sent to limited-display wireless terminals without modification, the user must scroll the display around to see the entire screen. Such scrolling is a thorn in the flesh for users needing hands-free movement.

Also, it may take many more screens to accomplish a transaction on a wireless terminal than on a full-screen one. For instance, entering an operator ID, product designation, serial number, quantity and bill of lading reference number — a one-screen job on a 3270 — turns into a three-screen job in an RF network environment.

If transactions are executed from wired 3270s, any change to the wired screens must be transferred to the wireless applications and vice versa.

**"As you change the transactions running on the RF network, you open up the whole issue of whether the changes will cause problems on the wired side."**

*Harry Sanders  
Collins and Aikman*

Most IS shops choose to rewrite the screens so data remains the same, but users get information a little at a time within the constraints of the display. Some RF networks perform this translation in the controller, some require modification in the host application.

Either way, someone still has to perform the conversions manually and someone must make sure the small screen version is kept up to date.

Unlike most corporate networks, transaction-processing RF networks serve users whose primary job does not involve computer work. The value of these networks comes from their ability to deliver data from corporate information infrastructures directly to people creating value in the company. The challenge for IS managers is to design and maintain the network so people can concentrate on their jobs, not the computer system.

Sharp is a data communications and automatic identification consultant in Tucson, Ariz., and a technical editor at *ID Software* magazine.

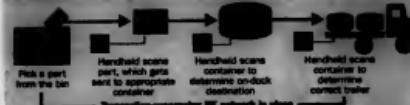

### MISSION-CRITICAL WIRELESS IN ACTION

#### COLLINS AND AIKMAN

Devices communicate directly with database via transaction-processing RF network

#### CHRYSLER

#### KMART

base radios have the intelligence to switch the handheld units automatically to the nearest base. Workers, who typically have had little exposure to computers, worry only about the job at hand, not about file transfer.

**"The operators never know which of the bases they are talking to."**

*Roger Valentine  
Chrysler*

Using a transaction-processing wireless LAN requires more than just a good solid communications channel, however. It must interact with the wired world.

Other wireless configurations, such as wireless desktop nodes, directly replace standard wire. Therefore, most software operating across a wireless network will interact with the wireless node without modification. The rest of the network sometimes does not know a particular node is connected without a wire.

Transaction-processing LANs, on the other hand, don't behave at all like wireless desktop LANs. The interface is not transparent, so the IS staff consciously needs to make the interface happen.

network application program, which can then distribute it to other applications on the wired network.

Some wireless transaction-processing networks get around the proprietary scripting problem by offering terminal emulation. In this case, the network RF terminals might look like a collection of 3270 terminals. Any application program written for a 3270 environment theor-

#### Types of transaction-processing RF networks:

##### Narrow band

• Need Federal Communications Commission license.

• 25-320-ft-wide spectrum allocation; up to 8.45 MHz. Unlicensed.

• Radios offer up to 2 watts of power, transmission 1 mile in the open or about 1 million square feet indoors.

• Interference protection. In theory because FCC license reserves frequency exclusively for installed networks.

##### Spread spectrum

• No FCC license needed.

• 25-320-ft-wide radio provides coverage of 850 to 1000 feet per cell. Known as interference protection. Between two and three cells per square mile.

• Organization gains by transmitting at high data rates. Block message 164 transmission bytes/second; even if it takes 10 sec to get through, error-correction algorithms ensure transparency.

## Users' choice

# Would we be running this ad if we came in second?

You probably won't see too many other ads singing the praises of this study.

And that's too bad.

"CompPro" as Simmons calls it, is the largest *independent* study of computer professionals ever produced by a major media research firm.

So it's not some publication blowing smoke about how they won their own research study.

It's Simmons.

And Simmons says nobody delivers computer professionals every week like Computerworld.

In fact, a quick check of the numbers shows that we deliver the most efficient reach of this all-important target. If you'd like to know what that means to you, call your Computerworld rep for a complete reach and frequency analysis.

You see, we're not only number one with computer professionals. We're also number one with the people who need to reach them.

# Computer Careers

## Making the switch

By David Baum

**THE SWITCH FROM working with flat files to working with relational databases mirrors a larger movement now taking place. Many organizations are introducing powerful new processors to supplement their mainframe systems, from low-end PCs to powerful Unix workstations. These processors find their way in the form of client/server applications, and increasingly, that spells one thing: relational databases.**

When Cobol was developed, programming languages had to have everything in them to make a monolithic application, including data management and data access functions, says John Bradley, vice president of Liant Software Corp. in Framingham, Mass.

Today, the database portion and the user interface portion are separate from the business rules, or application logic. It isn't the application's prerogative to

**Advice on working with relational databases for flat-file types**

decide how data is stored. "Cobol programmers are used to writing custom programs to retrieve data, and they bring this procedural mind-set to database querying and reporting," says Ana Shukla, director of worldwide marketing at Unisys Corp. in Alameda, Calif. "They have to start looking at problems in a relational fashion, which requires a different level of abstraction. Business problems must be analyzed in terms of the relationships of events."

While flat-file databases store, organize and retrieve information from one file at a time, relational databases store data in two-dimensional tables. Programs take data from several tables at once, relating information through links established by a column of keys.

Ken Fleming, president of Suite Software in Anaheim, Calif., says the main issue for flat-file programmers is making the mental shift that working with relational databases requires.

With flat files, relationships among files are managed by the applications themselves, and programmers must code for data management functions such as referential integrity, commit and rollback. But in the relational world, this work is handled by the database engine.

"The mistake programmers make is in bringing a flat-file mind-set to working

with relational databases," Fleming explains. "Instead of treating the relational database as a database, they treat it as a bunch of files. But the relational engines take care of referential integrity and other complex data management functions. Programmers don't have to burden applications with those tasks if they use the engines properly."

Application development actually gets simpler once programmers understand how to use the relational databases. To properly build a relational application, there is typically some kind of modeling scheme used to establish the entities and relationships of the database. A single

entity has multiple relations represented by data in tables. Relationships among files are established with foreign keys and views, which exist apart from any application's use of these files.

"Most Cobol programmers think of data as something they own and must be responsible for," Fleming adds. "But that's the database administrator's job. Application programmers should be focused on the business functionality of each application, not on how and where the data is maintained."

vs.

entity has multiple relations represented by data in tables. Relationships among files are established with foreign keys and views, which exist apart from any application's use of these files.

"Most Cobol programmers think of data as something they own and must be responsible for," Fleming adds. "But that's the database administrator's job. Application programmers should be focused on the business functionality of each application, not on how and where the data is maintained."

## Project Manager

The Marketing Force Division of ADVO, INC. is seeking a highly skilled information services professional.

The successful candidate must have a strong understanding of state-of-the-art computer-based technology can help a business to grow.

Outstanding oral and writing skills are required with the ability to present ideas effectively, yet tactfully, in group settings. A knowledge of ADVO's products, its industry and relevant software, management systems such as INFORMIX, Client Server knowledge is helpful.

Marketing Force offers an excellent compensation package, a full range benefits program, and a professional environment. Qualified candidates should forward a cover letter and resume to:

Marketing Force Division of ADVO  
10000 W. 72nd Street, Suite 1000,  
Minneapolis, MN 55430. Equal  
Opportunity Employer.

**AMCORE Financial**, Inc. is a bank holding company with assets of over \$1 billion. We are currently seeking a Marketing professional with a desire to lead our marketing programs to exceeding customer expectations. We are aggressively expanding and diversifying into new and exciting financial service areas.

**DEVELOPMENT PROGRAMMER**  
Five years programming in COBOL and CICS, experience on IBM/PS mainframe system and knowledge of VSE JCL, POWER, and Y2K required. Background in banking, insurance, or financial services preferred and experience converting from one vendor's banking application software to Systematics or plus. Some travel required. Will be a self-starter; non-on-site, high priority, and near passenger excellent communication skills.

An excellent package of compensation and benefits is ensured, including medical, dental, life insurance, profit sharing, pension, and 401(k) plan. Send your resume with salary requirements to:

## ANOTHER REASON WHY COMPUTERWORLD RECRUITMENT ADVERTISING WORKS ...

Computerworld gives you the unique option of REGIONAL or NATIONAL recruitment advertising.

Whether you want to run your ad in the Eastern, Midwestern, Western, National, or any combination of regional editions. Computerworld gives you the only regional recruitment advertising section available in the United States exclusively for computer professionals. And no other newspaper or magazine reaches so many qualified computer professionals regionally or nationally!

### Computerworld's Regional Editions

To place your ad regionally or nationally, call John Corrigan, Vice President/Classified Advertising, at 800/343-6474 (in MA, 508/879-0700).

**COMPUTERWORLD**

Where the qualified candidates look. Every week.

## Information Technology Specialists

SDC is a leading supplier of contract and direct information services personnel. Our clients represent the majority of commercial, defense, governmental and non-profit organizations. We have over 300 national openings for persons with a minimum of 2 years experience.

## "...Computerworld Direct Response Cards consistently generate the highest profits of any deck we've tried."

A software developer based in Chicago, cISOFTWARE has been providing communications solutions to computer professionals in the IBM and compatible arena for over a decade. Because Computerworld appeals to a large base of both mainframe and PC professionals, Vice President Mary Cooper just recently expanded the company's Computerworld Direct Response Card advertising to include all three of their communications products.

"To generate sales for Across the Boards, a communications toolkit for developing cooperative applications, and pcMAIN-FRAME, a generalized micro-to-mainframe file transfer system, cISOFTWARE has been advertising in Computerworld Direct Response Cards almost from the very start. Now, based on our past success, we've also started to advertise pcPOWER, our new file transfer system. Since all of our products facilitate mainframe-to-micro communication, we need to reach IS managers and technical support professionals on the mainframe side as well as end users on the PC side. That's why Computerworld Direct Response Cards, with their large audience of buyers most apt to need our products, are one of our primary advertising vehicles.

"Clearly, Computerworld Direct Response Cards take the 'hit or miss' out of advertising by qualifying our audience for us. We call it our high-profile deck because we not only get high visibility and a high rate of response but also convert a high volume of leads into sales. With their excellent cast

- Mary Cooper  
Vice President  
cISOFTWARE, Inc.

per lead, Computerworld Direct Response Cards consistently generate the highest profit of any deck we tried.

"In fact, we can always tell when our Computerworld Direct Response Card advertising hits because of the sudden surge in sales activity. Business really starts happening with more phone calls and more mail. It's a real morale builder! But most importantly, every time we advertise in Computerworld Direct Response Cards we receive well over 100 leads. Sometimes we even get responses six months later, so we know Computerworld Direct Response Cards have a long shelf life that gives cISOFTWARE valuable exposure for building awareness and share of mind over the long term.

"While reasonable rates for color and multiple insertions add considerable appeal, the large quantities of quality leads generated by every card we run is our key incentive for stepping up cISOFTWARE's advertising schedule in Computerworld Direct Response Cards."

Computerworld Direct Response Cards give you a cost-effective way to reach a powerful buying audience of over 137,000 computer professionals in the U.S. They're working for cISOFTWARE - and they can work for you. Call Norma Tamburina, National Account Manager, Computerworld Direct Response Cards, at 201/587-0090 to reserve your space today.

### COMPUTERWORLD DIRECT RESPONSE CARDS

## VISUAL DEVELOPMENT TOOLS

### 'My vendor didn't tell me that. . . .

#### shopper alert!

By David Baum

Visual development tools are catching on like wildfire as people look for quicker ways to get backlogged applications into production. They create beautiful graphical user interfaces (GUI), and their fast development cycles and short learning curves make them good for tactical development projects. But those tools don't always mention, in a recent poll, software developers offered the following firsthand observations on just when these tools are appropriate and when a more comprehensive application development environment is required.

#### ... the applications aren't portable.

Most visual development tools were designed to create and deploy applications on Macintoshes and PCs. In many cases this is adequate, but as a department expands, the applications created might not go along for the ride.

"Development tools that work only with Windows can limit an organization with a diverse information enterprise," says Paul Ameden, a systems analyst at Kodak's Office Imaging Division in Rochester, N.Y. His advice? For key applications, it is better to use a cross-platform tool.

At the high end of the tools market, for example, a product such as Uniface from Uniface Corp. enables the same application to be deployed on platforms running

Windows, the Open Software Foundation's Motif, Sun Microsystems, Inc.'s Open Look, IBM's Presentation Manager and character-mode systems simultaneously. The price for this capability is that it may be overkill for simple applications.

#### ... the software often only handles SQL commands.

"Many of the simpler visual development products force you to write code for all relational database transactions," says Keith Thorburn, a software architect at Arkwright Mutual Insurance Co. in Walther, Mass. This is not a problem in a simple application that accesses a few database tables, he adds. However, it can get extremely time-consuming for relational applications, where 50 or 100 tables might be involved, with numerous joins among them.

Most development tools support SQL, but they differ widely in their implementations. Ralph Dunlap, a project manager at Georgia-Pacific Corp. in Atlanta, spells out the problem.

"Unless you have tried it, you can't appreciate the effort required to create applications that include both graphical user interfaces and SQL database processing. Just to create a simple invoice application that allows for a one-to-many relationship with standard SQL operations, even with a visual development tool, is a three-week programming task." For applications that must access complex relational database structures, it's better to use development tools optimized for a relational environment.

#### ... the tools assume there are no provisions for high-level controls and data.

■ **Code makes waste.** And if you create an application with no regard to established corporate data models, you'll pay for it in extra maintenance.

"It's great to have the ability to quickly throw together an application, but are you enabling users simply to build bad applications faster?" asks Ray Stanley, senior consultant at Miles Burke Associates in Scottsdale, Ariz. "How do you ensure that these objects represent the integrated views required by the business and that you are building a reusable asset?"

This is a common complaint about many visual development products. Lacking intimate connections to front-end computer-aided software engineering tools, there is often no provision for a true analysis of business requirements. Simple applications have their place, but developers such as Stanley stress the importance of working from a data model for mission-critical systems, in which all objects and attributes have been carefully defined.

Another caution: Some visual development tools can use a logical data model as the foundation for applications, but developers must type in the data definitions, which can be time-consuming.

#### ... I have to write third-generation language code for all the business logic.

■ **Visual development products have enjoyed a nice ride on the GUI wave, but as application developers know, creating the GUI portion of an application is just the start. Once the interface is in place, you must connect it to the database and create the database-access logic.**

Most visual development tools and GUI builders generate code for the user interface shell, but customization of that in-

terface must be done manually, explains Todd Powell, senior systems analyst at Transamerica Corp. in Calgary, Alberta. "Even simple things that you probably take for granted if you have used a fourth-generation language, such as edit masks for a field, typically have to be manually programmed," Powell says.

#### ... the tools assume there are no provisions for high-level controls and data.

■ **Visual development tools often claim to be object-oriented but are often merely object-like.** "They are visual, or GUI, products, but they fail to meet any of the standard criteria for OOP languages, such as encapsulation, inheritance or polymorphism," says Coli Davies, a programmer in Sini Valley, Calif. Programmers who want a true taste of what it's like to work with objects are better served by a language such as Delphik, Inc.'s SmallTalk, he adds.

Others agree. "A lot of the new tool sets lean toward object orientation, but they aren't really object-oriented at all," says David Booty, a project leader at Paradigm Management, Inc. in Dallas. The foundation of object-oriented processing is inheritance, he continues. A true object-oriented environment can create reusable, encapsulated code units that are extensible. At runtime, each code unit or object dynamically inherits the set of attributes that makes it unique, without recompilation or relinking.

When evaluating what tools to use for a particular project, most developers ask themselves two things: how much coding will I have to do, and will the resulting system be viable over the long term? If you can accomplish your objectives with a visual development product, then go to it, but don't be seduced into attempting too much with one of these products. You might bite off more than you can chew.

Baum is a free-lance writer in Santa Barbara, Calif., who specializes in emerging technologies.

COMPUTERWORLD, the weekly newspaper for information systems now brings you a valuable resource tool - COMPUTERWORLD on CD. With over 4 years of full text articles, you can use it to:

- Search comprehensive product and vendor information quickly.
- Follow critical technology trends.
- Execute key word searches on any topic in seconds.
- Eliminate mass paper storage.

Updated on a quarterly basis, a one year subscription is just \$295. COMPUTERWORLD on CD operates on a PC (DOS and OS/2), Mac, Windows, and Sony Multimedia CD-ROM player environments.

To subscribe call: (800) 285-3821

## Pyramid rebuilt?

**Pyramid Technology Corp. (PYRD) has made great strides this year, but it is not completely out of the woods yet.**

Last Thursday, the company announced that its earnings will fall short of analysts' expectations for its fourth fiscal quarter, which ended Sept. 30. Investors punished Pyramid's stock with a 5% point drop on Thursday.

Pyramid, a San Jose, Calif., maker of Unix database server systems, will nonetheless post a profit for fiscal 1988 after losing \$1.78 per share the previous year. Through the first three quarters of fiscal 1988, Pyramid earned 42 cents per share, or just more than \$5 million, on revenue of about \$173 million. Fourth-quarter earnings per share should be on the order of 25 cents.

Pyramid blamed its fourth-quarter shortfall on the continuing weak economies in Europe and Japan. Smith Barney Shearson, Inc. analyst Shao Wang noted in a Sept. 29 report that past earnings problems may have sprung from Pyramid's attempts to cover too much ground. Pyramid appears to have refocused itself on the vertical markets where

Kemper Securities, Inc. Vice President Joseph Payne said he also thinks Pyramid is on the right track. "It looks like an accident, not a [long-term] fundamental dislocation." Pyramid and the economy should

The company manufactures symmetric multiprocessing servers that can be clustered to support more than 10,000 concurrent users. Pyramid recently started shipping new high-end Unix systems, called the Nile Series, priced upward of \$300,000, which analysts said should begin to drive

—Dorrit Waters

Prior to Thursday's drop-off, Pyramid Technology Corp. was one of the best performers among large systems vendors during the past year.

## Briefs

### Microsoft buys code

Microsoft Corp. beefed up its efforts to combat Novell, Inc.'s NetWare with its recent acquisitions of both code and several programmers from Webcorp, maker of a peer-to-peer operating system. Microsoft has already incorporated some of the capabilities of Webcorp's technology into its Win32s file server for Windows NT and will move that product into beta testing in the next few weeks.

### Imaging plans layoffs

Imaging Corp. said it plans to cut fewer than 100 employees in nondirect labor positions in the next few weeks. The layoffs follow a recent 25% price cut on selected products and are part of an overall expense reduction plan. The Roy, Utah, firm employs approximately 1,100.

**SHORT TAKES** Paul Allen, a co-founder of both Microsoft and Asymetrix Corp., has paid \$17.5 million for a stake in Metronix, Inc. The Los Gatos, Calif., firm's technology sends wireless electronic mail.... IBM has agreed to sell back a roughly 5% stake in Nippon Systems, Inc., to that company. IBM purchased the stake in September 1990; details of both transactions were not disclosed.... Joel Appelbaum has resigned as president and chief executive officer of Novell's Univel division.... Network Computing Devices, Inc. has named Judith Estrin, 35, president and CEO. She succeeds her husband, William Carriker, 45, who remains chairman.... AST Research, Inc. has an expanded credit line of \$225 million.... Lucent Corp. has elected Mario Morano to its board. A former company executive, he remains a "significant" shareholder.... MCI Communications Corp. has consolidated its U.S. operations and set up a new business unit overseeing international business.

## Vendors seek patents as copyright suits grow

By Mitch Bittis

NEW YORK

Faced with a confusing mixture of court rulings on software copyrights, computer lawyers are coming up with increasingly creative ways to get protection for vendors' intellectual property rights.

Speakers at the recent 14th annual Computer Law Institute in New York said they expect to see an acceleration of the trend toward supplementing copyright protection with software-related patents, which give the holder 17 years of monopoly rights.

David Bender, a partner at White & Case in New York, said there are an estimated 16,000 patents for software-related inventions. The litigation that will test their mettle has already begun, he added.

One of the biggest cases goes to trial in December. Stac Electronics, Inc. is suing Microsoft Corp. for patent infringement over the data-compression utility in DOS 6.0.

The disadvantages to patents are their expense and the fact that they take about two years to wind their way through the U.S. Patent and Trademark Office. In addition, experts said patent applicants must meet high standards when proving their invention's novelty—it cannot be something obvious or "as old as the hills."

### Is it truly novel?

On the other hand, a patent provides very powerful and broad protection for a truly novel invention. Bender said that if the first computerized spreadsheet had been patented, for example, that would have precluded all subsequent computerized spreadsheets.

The big problem now is that many existing patents are probably invalid, attorneys said, due to poorly trained examiners and the lack of a database of technical literature on the "prior art." That problem may be temporary, however, because the industry is funding a Software Patent Institute in Ann Arbor, Mich., to develop a database to help patent office examiners.

Bender said he expects to see more software patents filed as a result of several court decisions that nibble away at the scope of copyright protection for software, such as the trial case of Computer Associates International, Inc. v. Altai, Inc.

Because the courts are not speaking with a

unified voice on software copyrights, some attorneys are urging their high-tech clients to consider not only patents but also an even more creative approach called "trade dress."

Trade dress is a category of trademark law that covers the visual appearance of a product, including its color, size, shape, texture and graphics. Typical examples include the shape of a ketchup bottle, the pink color of fiberglass insulation and the colorful decor of a Mexican restaurant.

Presumably, trade dress could extend to the "look and feel" of a software product's graphical user interface. "Trade dress is another potential weapon for protecting software," said Allen R. Grogan, a partner at Blawie Williams Johnston & Kronstadt in Los Angeles.

There is little or no case law testing the use of trade dress for software, Grogan said, but "the attitude is: Try it and see if it works."

Trade dress could also be used to protect the look and feel of a computer-generated report or form. In the 1992 case of Computer Care v. Service Systems Enterprises, Inc., the U.S. Court of Appeals in Chicago stopped a competitor from copying the format of a firm's computer-generated reports and letters to car owners.

## Borland sees profitable quarter

By Michael Vizard

Despite the freezing of Quattro Pro spreadsheet sales this past quarter in anticipation of the release of Quattro Pro 5.0, Borland International, Inc. last week said it expects to report its third consecutive quarterly profit later this month.

Although Borland has shipped about 15,000 copies of Quattro Pro 5.0 since its introduction last month, a company spokesman said that overall revenue for the quarter will be down from the previous quarter due to costs associated with an exchange program for resellers holding earlier copies of Quattro Pro that might violate copyrights owned by Lotus Development Corp. (CW, Aug. 30).

Borland is expected to incur a charge of anywhere from \$10 million to \$100 million as a result of losing a copyright infringement battle with Lotus. That case is now under appeal.

In its last quarter, Borland reported \$62.2 million in net revenue on sales of \$123.4 million. In the previous quarter, it reported \$5.1 million net on sales of \$117.1 million. Last December, the company reported a \$61.3 million loss on sales of \$104.5 million.

terests of monopolists. "Open systems are like heaven. Everybody wants to be there, but nobody wants to die to get there," Cloty said.

Protestant Victor Filor, senior corporate counsel at IBM in Stamford, Conn., argued that compatibility is a business strategy, not part of copyright law. The soybys are merely "true riders" who want to dominate essential and innovative competition, he said.

"What's going on here is really a battle between those who believe the industry will flourish if they protect inventors and those with the mentality who want to allow loopholes for imitation," said another protestant, Henry H. Christensen, a partner at O'Melveny & Myers in New York and lead counsel for Lotus Development Corp. "We have represented Lotus in a series of copyright infringement lawsuits...." —MICHAEL VIZARD

## Point/counterpoint

The Computer Law Institute featured a lively debate between the software industry's two warring camps: the "copyright" and the "maximum protectionists."

Arguing on the copyright side was Roger M. C. Chao, deputy general counsel of Sun Microsystems, Inc. in Mountain View, Calif., a clear maximum protectionist. "Infringement of software is a necessary alternative to bad ways to make their software competitive with products that are de facto standards."

Chao further asserted that software is more malleable than literary works and therefore should get "thicker" copyright protection if it is to be protected in a series of uncooperative, interlocking

Windows: You'd get into your car and drive to the store very slowly because a freight train is attached to the back of your car.

Windows 3.1: You'd get into your car and write a letter that says, "Go to the store." Then you'd get out of the car and mail the letter to your dashboard.

OS/2: After fueling up with 6,000 gallons of gas, you'd get into the car and drive to the store with a motorcycle escort and marching band in procession. Halfway there, the car would blow up.

Taligent: You'd walk to the store with Ricardo Montalban, who tells you how wonderful it will be when he can fly to the store in his jet.

### At your service

Look for Microsoft to move toward a directory service that would provide applications with access to connectivity to resources around the enterprise without integration with Novell and Unix directory services. The service will also feature a Kerberos-compatible security system that will be a "quantum leap" over what's already available, one executive says.

### Close to you

Globalsoft-edited network service provider Infonet plans to spin up a new-based pricing option for its 1.5 million U.S. base of LAN-interconnected dedicated servers. The new service will let small and medium network users, according to a company spokesman, use company Infonet site plan to help with the connection to international frame relay services with an offering in January, the source said. In the first half of next year, the company will focus on bringing its site plan closer to the desktop with moves that could include ISDN adapters and services.

### The world is getting out

WordPerfect is getting ready to expand its PC application base. The company plans to launch later this month its first personal information manager and will bring out a Works for Windows package, tentatively called WordOffice Suite.

**HP responded to charges last week that it is driving residents of India who come to the U.S. into insatiable wages as contract programmers. The charges, which originated on Oct. 10, 1993, were exemplified on Tuesday when a suit filed in a California superior court by California for Population Rehabilitation, The suit argues that the hiring practice drives down wages for U.S. workers. An HP spokesman said 275 Indian residents are doing contract programming, staying in the U.S. an average of 18 months. The company has spent about \$600,000 on programming, he said. The suit, filed in San Jose, and the Indian programmers were not responding. The suit demands damages for wages lost and the contract expires Oct. 1, 1994. Contact: Diane Miller, Deloitte & Touche, 1000 Main St., Suite 1700, San Jose, CA 95112, (408) 270-0882 or 730-274-4474, respectively. ## In fact, we've pioneered it from the beginning.

For most of the time they've been in business, other network hub makers have built simple connectivity devices for departmental LANs.

But Chipcom got its start in the brutal environment of the factory floor. Big factory floors. From our very beginning, we created the equipment needed to reliably hold together large, mission-critical networks for big companies.

We realized very early in the game that building a vast network was one thing. Controlling it was another. And we also recognized that as entire enterprises became networked, the problem would become even more critical.

Which is why we were the first to turn to switching, and why we have been the leaders in switching technology ever since. Whether a particular application requires modular bank,

port or segment switching, Chipcom has the solution. And as ATM looks ever closer, Chipcom's cell-switching abilities will be ready for it.

## Chipcom switching technology makes true enterprise networking a reality.

No other maker of intelligent hubs offers you the vast array of switching capabilities that Chipcom delivers.

No other line of hubs gives you the ability to engineer an enterprise-wide network with the rock-solid reliability, ease of management and control, and flexibility to handle continued change and growth as Chipcom does. And because our roots were planted in the world of big, far-flung networking, our underlying architecture has always assumed bigness. So you never have to scrap your earlier Chipcom investment as you grow.

## When you're thinking big, you should be thinking Chipcom.

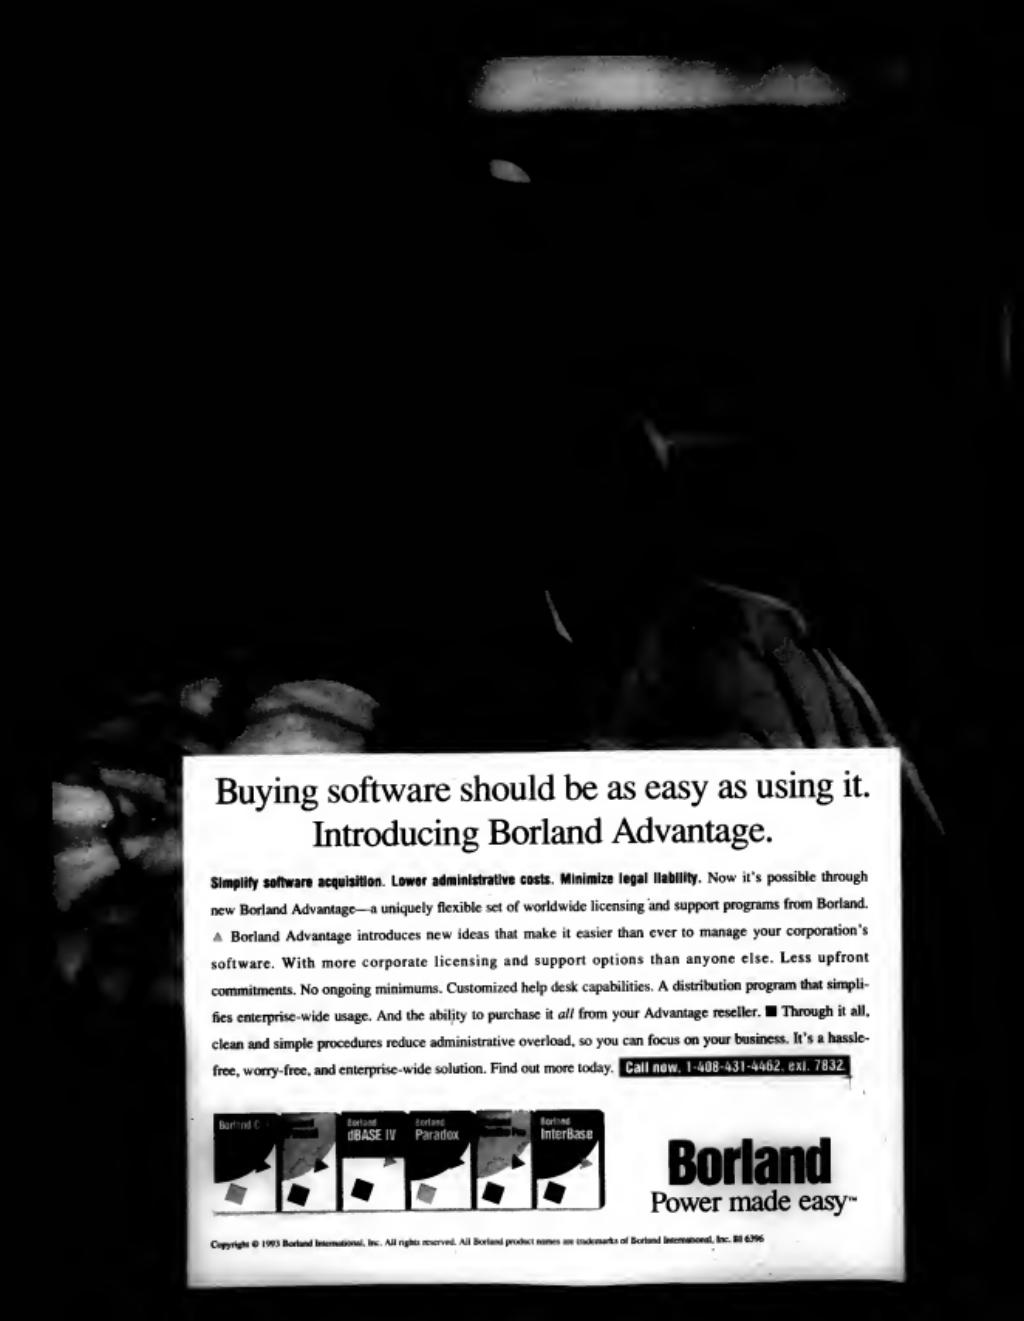

When a well-known retailer with over 2,000 stores decided to network their entire operation, they chose Chipcom. A large petrochemical company with refineries in six western states made the same choice. A major insurance company with thousands of offices across the U.S. investigated every hub makers' products before they selected Chipcom.

Hundreds of manufacturing companies, financial institutions, universities and government agencies have learned that if you're building a small network, you have a number of choices. But if you're thinking big, there's only one Chipcom.

To learn what Chipcom switching technology can do for your organization, call 1-800-228-9930 and ask for your free copy of *Network Switching Solutions*. After all, if you're smart enough to realize what switching can do for your organization, you're smart enough to want to talk to the people who pioneered it.

## Buying software should be as easy as using it. Introducing Borland Advantage.

**Simplify software acquisition. Lower administrative costs. Minimize legal liability.** Now it's possible through new Borland Advantage—a uniquely flexible set of worldwide licensing and support programs from Borland. ▲ Borland Advantage introduces new ideas that make it easier than ever to manage your corporation's software. With more corporate licensing and support options than anyone else. Less upfront commitments. No ongoing minimums. Customized help desk capabilities. A distribution program that simplifies enterprise-wide usage. And the ability to purchase it *all* from your Advantage reseller. ■ Through it all, clean and simple procedures reduce administrative overload, so you can focus on your business. It's a hassle-free, worry-free, and enterprise-wide solution. Find out more today. **Call now. 1-408-431-4462, ext. 7832.**
